SUBJECT: REVIEW OF REPORT TITLED, "ASSESSMENT OF RESIDUAL CESIUM-137  
IN SEDIMENT, WESTWOOD RADIOLOGICAL MATERIAL DISPOSAL  
FACILITY," DATED MARCH 2006, MAIL CONTROL #138798

Dear Mr. Zarzycki:

In your letter dated April 27, 2006, you requested NRC's review of the subject report and its conclusion that no further cesium-137 remediation is warranted at the site. NRC has reviewed the report and finds that the source term, scenario, and exposure pathways used in the assessment were appropriate. Further, NRC believes that the input parameters were consistent with site conditions. NRC concludes that the dose assessment for the residual cesium-137 sediment contamination is acceptable and demonstrates that the site meets the dose criterion in 10 CFR 20.1402 for unrestricted release without further remediation.

Sincerely,

***Original signed by James P. Dwyer***
