**Report of Design Basis Accident Testing  
For  
TXU Generation Company – Comanche Peak SES**

The Design Basis Accident (DBA) Testing was performed at Keeler & Long PPG NAS Testing Facility. The tests were conducted in accordance with TXU Generation Company's purchase order #S 0487488 6D2 issued on 10/26/05 (Section 2 of this Report), the requirements of ASTM D 3911-03 Standard Method for Evaluating Coatings Used in Light-Water Nuclear Power Plants at Simulated Loss of Coolant Accident (LOCA) Conditions, and Keeler & Long PPG Quality Assurance Procedures R&D 123 and R&D 124 (Section 3 of this Report).

NUCLEAR SAFETY RELATED  
TECHNICAL AND QUALITY ASSURANCE REQUIREMENTS

1.0 SCOPE OF WORK

- 1.1 The supplier shall perform testing on coating samples removed from Comanche Peak Unit 1 Containment to be autoclave tested. Jon Cavallo shall witness the beginning and ending of the autoclave testing. A written and photographic test report shall be prepared by the supplier and independently reviewed by Jon Cavallo.

2.0 QUALITY ASSURANCE REQUIREMENTS

- 2.1 The provisions of Title 10 of Code of Federal Regulations, Part 21, (10CFR21) shall apply. A copy of any report furnished to the Nuclear Regulatory Commission in compliance with the provisions of 10CFR21 concerning equipment or services intended for use at the Comanche Peak Steam Electric Station (CPSES) shall be transmitted to the Sr. VP & Principal Nuclear Officer at the same time and in the same manner in which the report is furnished to the Nuclear Regulatory Commission at the following address:

TXU Generation Company LP  
Comanche Peak SES  
P.O. Box 1002  
Glen Rose, TX. 76043  
Attn: Sr. VP & Principal Nuclear Officer  
E-mail: vdg\_transmittal@txu.com

- 2.2 The supplier shall have a documented Quality Assurance (QA) program that implements the applicable criteria of Title 10 of the Code of Federal Regulations, Part 50, Appendix B (10CFR50 Appx. B) and ANSI N45.2. The supplier's QA program shall be subject to verification by the purchaser's Quality Assurance department. These QA Requirements shall be extended as required to the supplier's lower tier suppliers.

NUCLEAR SAFETY RELATED  
TECHNICAL AND QUALITY ASSURANCE REQUIREMENTS

2.0 QUALITY ASSURANCE REQUIREMENTS (CONT'D)

- 2.3 Testing shall be processed under the latest supplier's QA Manual. Any subsequent revisions to the supplier's QA Manual previously approved by the purchaser shall be submitted as one (1) controlled copy for information prior to fabrication/shipment of the item(s). Submit revisions to:

TXU Generation Company LP  
Comanche Peak SES  
Attn: Procurement Overview  
P.O. Box 1002  
Glen Rose, Texas 76043

- 2.4 Testing services shall be processed by the approved facility identified in the purchase order. The documentation package provided with shipment shall indicate the approved facility as the shipping point or, if the shipping point is not from the approved facility, the documentation package shall indicate that the items were processed in accordance with the QA program of the approved facility.
- 2.5 The purchaser shall have right of access to supplier's plant, facilities and records as required for inspection and audit purposes. The supplier shall also provide right of access by the purchaser to lower tier quality suppliers for inspection and audit purposes when the lower tier suppliers are not exempt from 10CFR21 requirements. Purchaser's right of access shall include access by purchaser's designated representative and other authorized parties such as regulatory agencies. This request will normally be identified at order entry time and coordinated with the supplier.
- 2.6 The supplier agrees to stop work and/or withhold shipment at the request of the purchaser of his representative until resolution of any Quality Assurance or Quality Control deficiencies.

TECHNICAL AND QUALITY ASSURANCE REQUIREMENTS

3.0 DOCUMENTATION REQUIREMENTS

- 3.1 Documentation required by this purchase order shall be suitable quality and format for subsequent reproduction by the purchaser. The format, media and addressing requirements below apply unless otherwise approved by the purchaser, either by separate written agreement or by modification to the purchase order. Any other changes to the documentation requirements are permitted only by modification to the purchase order. Drawings, or other documents/procedures prepared as a result of this purchase order which are required for approval by the purchaser or its engineers shall include a title block or title page which shall uniquely identify the documents, its number of pages, and contain the following information as a minimum: TXU Generation Company LP, Comanche Peak Steam Electric Station, and purchaser's order number.

Electronic documents may be submitted if they are formatted in one of the file types shown below:

- |                         |  |
|-------------------------|--|
| • Word Perfect (.wpd)   | • Adobe (.pdf)                               |
| • MS Word (.doc) (.dot) | • Bitmaps (.tif)                             |
| • ASCII text (.txt)     | • Digital photos (.jpg)                      |
| • MS Excel (.xls)       | • Microstation version 5.0 and higher (.dgn) |
| • Lotus 123 (.wk4)      | • AutoCad version 12 and higher (.dwg)       |

- 3.2 Documentation requirements are identified in the purchase order attachment entitled "Summary of Required Documents" (SORD). Unless otherwise noted on the SORD, documentation that is to be submitted prior to fabrication, before, concurrent with, or after shipment shall be submitted to:

(AIRMAIL)

DCC Vendor Document Group  
TXU Generation Company LP  
Comanche Peak SES  
P.O. Box 1002  
Glen Rose, Texas 76043  
E-mail: vdg\_transmittal@txu.com

NUCLEAR SAFETY RELATED  
TECHNICAL AND QUALITY ASSURANCE REQUIREMENTS

3.0 DOCUMENTATION REQUIREMENTS (CONT'D)

- 3.3 Documentation requirements listed in Section A of the SORD are considered programmatic submittals which are required only if the SORD line items affect the item(s) in this purchase order. The purchaser considers the suppliers certification required by Section 3.8 as evidence that any necessary submittals are complete.

For documents previously submitted (and approved by TXU Generation Company LP) that are current (e.g., drawings, procedures, etc.) and applicable to items being procured, resubmittal is not required. Subsequent revisions to these documents which are to be used for the item being procured shall be submitted to TXU Generation Company LP for review and approval.

- 3.4 Where document submittals and/or witness or hold points are required by the purchase order or its attachments at some point in the manufacturing cycle (i.e., prior to fabrication, prior to shipment, prior to test/assembly, etc.) purchaser review, acceptance and/or approval, or waiver or such requirements must be obtained, in writing, before the supplier may proceed past that point in the manufacturing cycle. Failure to comply may result in the issuance of a "Stop Work" order or cancellation of the order.

- 3.5 Quality Assurance records identified by the suppliers Quality Assurance program shall be maintained in accordance with the requirements of that program. The purchaser may also deem other records not described in the supplier's Quality Assurance program, as Quality Assurance records. These Quality Assurance records are listed in the SORD as requiring supplier retention. These additional Quality Assurance records shall be maintained in accordance with the same requirements as described in the supplier's Quality Assurance program. Purchaser concurrence is required prior to the disposition of any quality assurance records by the supplier.

NUCLEAR SAFETY RELATED  
TECHNICAL AND QUALITY ASSURANCE REQUIREMENTS

3.0 DOCUMENTATION REQUIREMENTS (CONT'D)

3.6 Nonconformances to the procurement requirements or TXU Generation Company LP approved documents and which consist of one or more of the following shall be submitted to the purchaser for approval of the recommended disposition (i.e., "Repair" or "Use-As-Is"):

1. Technical or material requirements are violated.
2. Requirement in supplier documents, including those approved by the Purchaser, is violated.
3. Nonconformances cannot be corrected by continuation of the original manufacturing process or by rework.
4. The item does not conform to the original requirement even though the item can be restored to a condition such that the capability of the item to function is unimpaired.

Nonconformances shall be submitted upon occurrence to the above addressee (Section 3.2). A copy of the completed Nonconformance Report including TXU Generation Company LP's approval of the disposition shall accompany the shipment for information only.

- 3.7 Deviations from the purchase order or purchaser approved drawing requirements require acceptance upon occurrence by the purchaser prior to implementation. Deviations shall be submitted to the addressee listed in Section 3.2. Documentation of deviations and purchaser's acceptance shall be transmitted with shipment for information only.
- 3.8 In addition to other required documentation, the supplier shall complete and sign a certification document which indicates that the requirements of this purchase order have been met. This certification shall be attested to by a person who is responsible for this quality assurance function and whose function and position are described in the supplier's Quality Assurance program.

NUCLEAR SAFETY RELATED  
TECHNICAL AND QUALITY ASSURANCE REQUIREMENTS

3.0 DOCUMENTATION REQUIREMENTS (CONT'D)

3.9 When the Supplier is providing software the supplier shall provide a certification letter stating that software is virus free when submitting any removable software media.

3.10 When the Supplier is providing software the supplier shall provide a certificate that no malicious codes (eg: "Trojan horse", "Easter Egg", ...) are contained in the application software developed by the provider.

3.11 Supplier is to provide purchaser the test specification for purchaser's approval prior to testing. The test specification shall include the following attributes:

Autoclave testing shall be conducted in accordance with ASTM D3911-03, 'Standard PWR Curve' with the following exceptions:

- A. The coating samples will not be irradiated prior to autoclave testing.
- B. The coating samples will be placed, one layer deep in two 10-in diameter trays, with 1/32 in diameter holes drilled in the bottom of the tray to permit spray water/condensate to flow through the samples and trays. One tray shall be positioned in the vapor phase of the autoclave, and one tray shall be positioned in the bottom of the autoclave in the immersion zone.
- C. The spray recirculation lines of the autoclave shall be equipped with 10  $\mu$ m filters to collect any coating test debris smaller than 1/32 in.
- D. The post-test evaluation shall be conducted once at 4 hours after completion of testing. The 14 day post-test evaluation provided in ASTM D3911 is not required.

4.0 TECHNICAL REQUIREMENTS

4.1 GENERAL

4.1.1 Any of the requirements of this purchase order which cannot be met shall be identified by the supplier prior to acceptance of the order, by written exception to the specific requirement. Supplier-determined options or variables which require change to identification information but do not alter the design characteristics of the item(s), shall be identified in writing as clarifications to the requirements prior to acceptance of the order.

4.1.2 Nothing in this purchase order shall relieve the supplier from the responsibility for performing those tests and/or inspections necessary to ensure that the item(s) being supplied will satisfactorily perform their intended function and comply with the codes, standards, and specifications as referenced herein.

4.2 SPECIFIC

4.2.1 The minimum classification of protection level for items of this purchase order is Level B.

## Test Conditions and Results

### Description of DBA Testing Apparatus:

- The Stainless Steel Steam Generator consist of (2) 4500 watt heating elements. The generator is used to provide the steam needed for the Autoclave in the initial moments of the test and to help maintain the heat needed for 307<sup>0</sup>F segment.
- The Stainless Steel Autoclave is the vessel used to contain the samples during the test. The samples are placed in two stainless steel trays and hung on a rack. The Autoclave has two steam supply lines, one regulated and the other unregulated. It is also equipped with a recirculation line that takes water from the bottom of the Autoclave and a fresh water solution supply line on the top. The fresh water solution line is used to make the drops in the temperature when needed. Both of these lines are powered by using re-circulating pumps. The Autoclave is surrounded by 1500 watt heating elements. These heating elements are used to too maintain the required heat after the Steam Generator Lines are shut off.
- There are two stainless steel filter canisters that are attached to the re-circulating lines. These can be equipped with 10 $\mu$ m filters to capture any transportable debris coming out of the Autoclave.
- The control panel is home to two digital controllers. The first controller is used to program the upper portion of Autoclave (vapor phase) and the second controller is used to program the lower Autoclave (immersion phase).
- The control panel also has a Honeywell paperless chart recorder to monitor the test. Along with time, the recorder keeps track of the upper and lower Autoclave temperatures and pressures.

### Conditions:

- Samples were placed in (2) 9 inch diameter trays made of stainless steel sheeting with 1/32 inch diameter holes. The top tray located in the vapor phase of the test was attached to the upper portion of the autoclave stand and was designed without a lid so as to avoid covering the samples. The bottom tray was designed with a lid to contain the samples and was attached to the lower autoclave stand or immersion zone.

- The samples were then placed into the Autoclave and lid was bolted. Operation procedures listed in R&D-124 were then followed. Filter #2 canister was used during the 7 day test and was equipped with a 10 $\mu$ m filter.
- The DBA test started on April 6<sup>th</sup> 2006 at 12:48pm. The 307<sup>0</sup>F temperature was reached in 17 seconds and the pressure spiked as high as 71.2psi. After 2 hours 46 minutes the temperature was dropped to 250<sup>0</sup>F and the pressure was adjusted to 30psi. The temperature was lowered by using a deionized water spray solution per ASTM D3911-03 and a pH value of 9.0-9.5.
- On April 10<sup>th</sup> 2006 (Day 4 of test) at 12:48pm the temperature was dropped from 250<sup>0</sup>F to 200<sup>0</sup>F and the pressure was adjusted to 10psi. The temperature was again lowered by using the same deionized water spray solution mentioned above. These conditions were maintained for the duration of the test.
- On April 13<sup>th</sup> 2006 at 12:48pm the test ended and the test specimens and the 10 $\mu$ m filter were removed from filter #2 canister.
- To collect any remaining debris in bottom of Autoclave and recirculation lines a 10 $\mu$ m filter was placed into Filter #1 canister and lid replaced on Autoclave. After recirculation pump ran for 1 hour, the filter was removed.
- The Autoclave tray samples were then placed in an oven set at 150<sup>0</sup>F for 2 weeks to drive out any moisture obtained during testing. The samples were removed then weighted.

## **Results (See Section 5):**

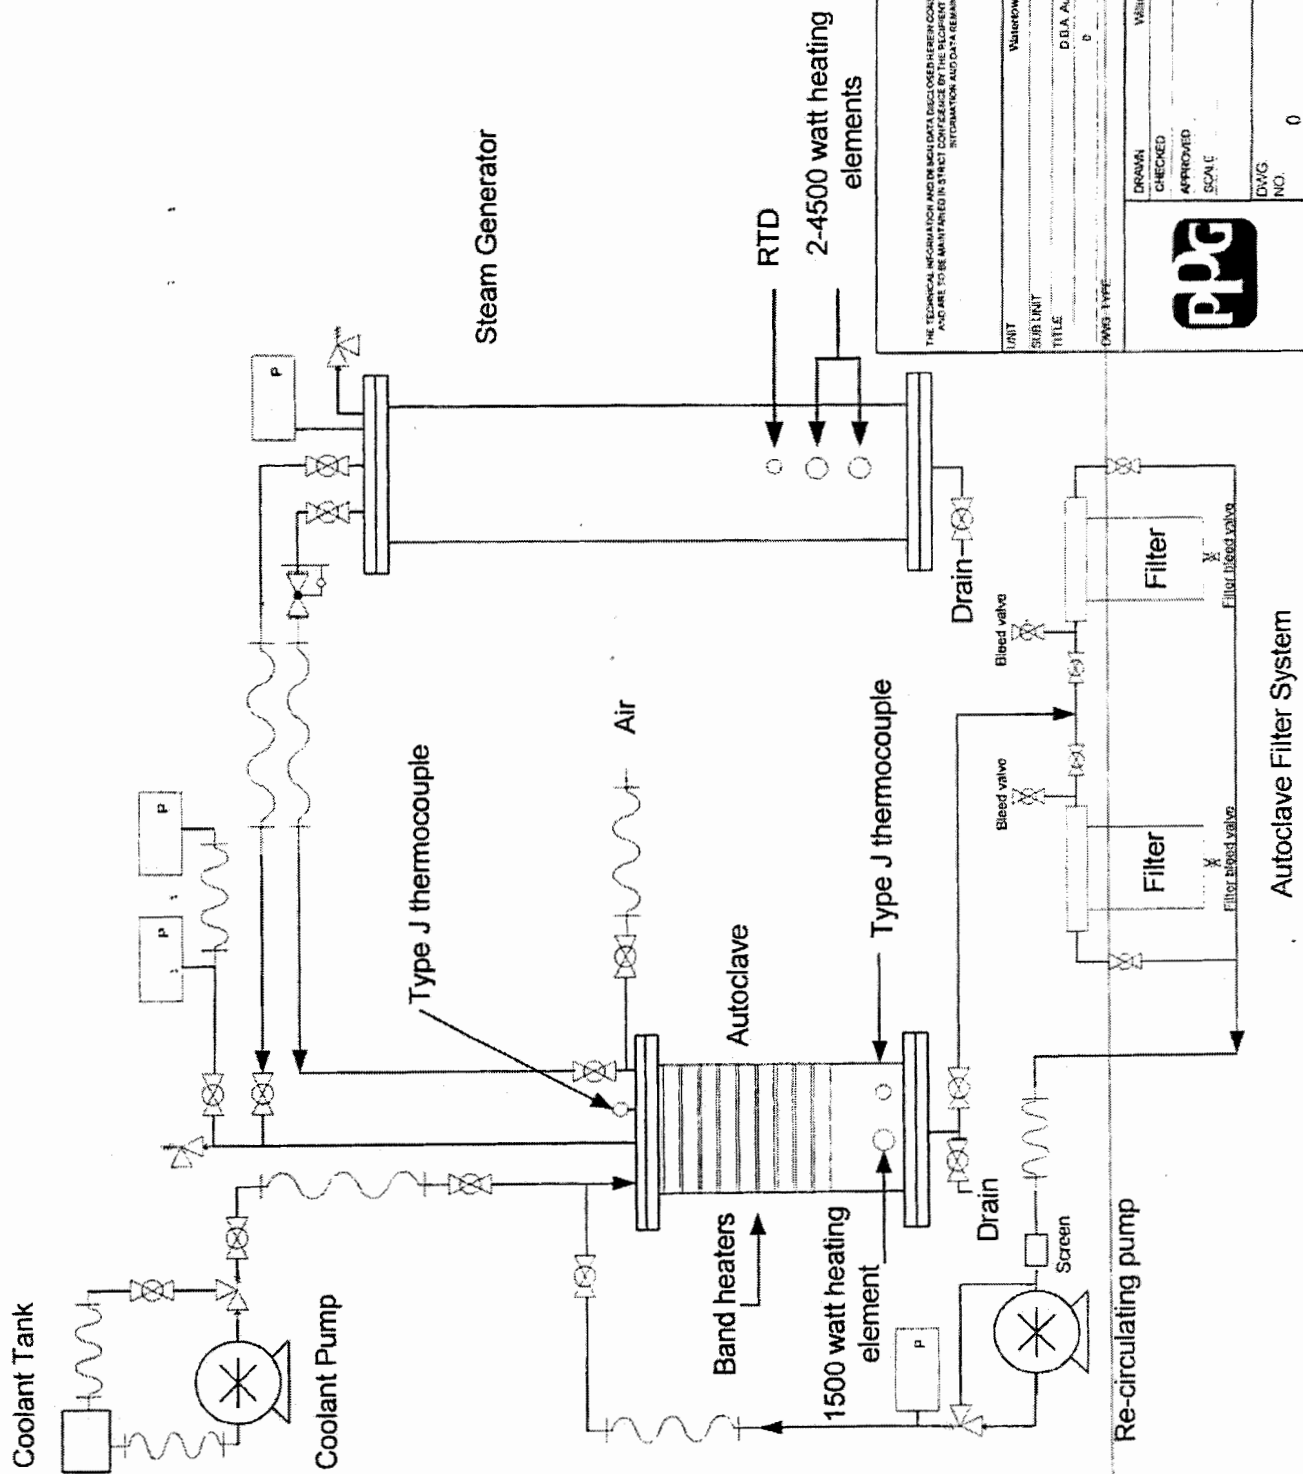

The total weight loss of sample chips after DBA testing stated in section 5 of this report (3.7656 grams), would be considered transportable debris.

## **Conclusions:**

- The 3.766 grams of coating debris generated during the DBA test appears to have been collected on the 10 $\mu$ m filters in the recirculation loop of the autoclave.
- The coating debris collected on the 10 $\mu$ m #2 filter in the recirculation loop of the autoclave is grayish / grayish-white in color, indicating that it is comprised of zinc and zinc oxide particles released from the back side of the original coating pieces during DBA testing.
- Based on 50X microscopic observation of the coating debris collected on the 10 $\mu$ m #2 filter in the recirculation loop of the autoclave, the debris appears to be primarily >10 $\mu$ m to <100 $\mu$ m in diameter, further indicating that it is comprised of zinc and zinc oxide particles released from the back side of the original coating pieces during DBA

testing.

- Neither evaluators (Chris Palen and Jon Cavallo) or approver (John De Barba) of this report observed any transported particles of phenolic topcoat on the 10 $\mu$ m filter in the recirculation loop of the autoclave, indicating that the phenolic topcoat sample pieces generated relatively large (>1/32 in. diameter), non-transportable debris during the DBA testing.
- Further examination and evaluation of the filter using scanning electron microscopy-energy dispersive x-ray spectroscopy (SEM-EDS) with microphotography up to 5000X is in process. This will serve to confirm visual observation above.  
**See Addendum to Report #06-0413.**
- The chip size characterization of the debris located at the bottom of the autoclave was photographed prior to infrared spectroscopy and can be viewed in the picture section of this report. Although it was not measured for exact size, the 50X microscopic observation of the coating debris collected on the recirculation loop filter indicated smallest size >10 $\mu$ m. It can be correlated that the smallest size in the bottom of the autoclave would also be >10 $\mu$ m. The largest measurement of any single chip in the bottom of the autoclave was <127 $\mu$ m.

THE TECHNICAL INFORMATION AND RECOMMENDATIONS CONTAINED HEREIN CONSTITUTE THE PROPERTY OF PPG INDUSTRIES INC. AND ARE TO BE MAINTAINED IN STRICT CONFIDENCE BY THE RECIPIENT HEREOF SO LONG AS AND TO THE EXTENT THAT SUCH INFORMATION AND DATA REMAIN UNPUBLISHED.

**SUBJECT: Sample Disposal**

Dear Mr. Palen:

Enclosed is your final report. Since this project is completed, samples will be returned due to space limitation. Please respond to 412-788-1300, extension 205 within 30 days if you wish to have your samples discarded. If we do not hear from you at this time, the samples will be returned. Handling cost for the sample return is \$25.00 plus shipping.

Thank you for doing business with KTA-Tator, Inc.

Very truly yours,

**KTA-Tator, Inc.**

**SUBJECT: Microphotographs of Filter; KTA Project No. 260605**

Dear Mr. Palen:

In accordance with Proposal Number PN060625 and subsequent signed Authorization to Proceed dated August 1, 2006, KTA-Tator, Inc. (KTA) has examined one (1) filter sample to determine the size(s) of particles entrapped in the filter. This report describes the procedures and contains the result of the examination.

### **SAMPLES**

The following sample was received from PPG-Keeler & Long on July 24, 2006:

Sample KTA-1 – One 10" long cylindrical filter, white, labeled "TXU CZ11/305, #2 Filter (Right Side) 7 days, 4/6-13/06."

It should be noted that at no time did KTA-Tator, Inc. personnel witness the acquisition of the above sample.

### **LABORATORY INVESTIGATION**

The laboratory investigation consisted of scanning electron microscopy-energy dispersive x-ray spectroscopy (SEM-EDS) of one (1) filter sample to determine the size(s) of entrapped particles. The results of the investigation are provided below.

#### **Scanning electron microscopy-energy dispersive x-ray spectroscopy (SEM-EDS)**

SEM-EDS was performed using a R. J. Lee scanning electron microscope equipped with an energy dispersive x-ray spectrometer. Sample preparation involved mounting a section of the outermost layer of the filter on a metallic stub and carbon-coating to impart conductivity. Three microphotographs were obtained and are appended.

Briefly, the analysis revealed the following:

1. The sizes of particles measured in the 50X/230X microphotograph (No. 1) of Sample KTA-1 were 9.18, 14.87, and 6.75  $\mu\text{m}$ . It is possible that the 6.75  $\mu\text{m}$  particle measurement was not accurate because the particle may be partially hidden.
2. The sizes of particles measured in the 100X/100X microphotograph (No.2) of Sample KTA-1 were 15.53, 27.78, 28.64, and 89.28  $\mu\text{m}$ .
3. The sizes of particles measured in the 100X microphotograph (No. 3) of Sample KTA-1 were 13.89, 17.36, 17.36, 29.67, and 39.59  $\mu\text{m}$ .

If you have any questions or comments regarding this report, please contact me at extension 205.

Very truly yours,

**KTA-TATOR, INC.**

# **Test Results Of Infrared Spectroscopy And Scanning Electron Microscope-EDS**

## **Addendum to Report #06-0413**

- As reported in KTA-TATOR, Inc. Project No. 260670, infrared spectroscopy of paint chips extracted from the bottom of the autoclave was consistent with an epoxy resin containing hydrous aluminosilicate- similar to china clay, titanium dioxide, and calcium carbonate. All ingredients were used in Phenoline 305. The CZ-11 also used hydrous aluminosilicate, similar to china clay. These paint chips were not transported to the filter.
- As reported in KTA-TATOR, Inc. Project No. 260670, infrared spectroscopy of dried residue obtained from the recirculation water used during the DBA Test contained calcium carbonate and silicates. The silicates would have been from the resin portion (ethyl silicate) of Carboline CZ-11. Calcium carbonate is used as a filler primarily in epoxy coatings such as the Phenoline 305. There was no detection of epoxy resin in the recirculation water.
- As reported in KTA-TATOR, Inc. Project No. 260670, infrared spectroscopy of brown material extracted from the filter in KTA Project No. 260605 contained mostly silicates, china clay, titanium dioxide, and zinc carbonate. The silicates would have been from the resin portion (ethyl silicate) of Carboline CZ-11. The china clay, titanium dioxide, and zinc carbonate would primarily be used in epoxy coatings such as the Phenoline

305, however there was no detection of epoxy resin.

- As reported in KTA-TATOR, Inc. Project No. 260670, infrared spectroscopy of white material extracted from the filter in KTA Project No. 260605 contained mostly silicates. The silicate would have been from the resin portion (ethyl silicate) of Carboline CZ-11. Although the KTA report states it is most likely silicone, neither CZ-11 nor Phenoline 305 contain silicone. This does not affect the analysis of the materials or the chemistry of the recirculation water. There was no detection of epoxy resin.
- As reported in KTA-TATOR, Inc. Project No. 260670, SEM-EDS revealed paint chip composition to be carbon, oxygen, aluminum, silicon, titanium, and zinc. All these elements are present in the CZ-11 and Phenoline 305.

## KTA-TATOR, INC.

115 Technology Drive, Pittsburgh, PA 15275

September 13, 2006

Mr. Chris Palen  
PPG/Keeler & Long  
856 Echo Lake Road  
P.O. Box 460  
Watertown, CT 06795

**SUBJECT: Results of Infrared Spectroscopy and SEM-EDS; KTA Project No. 260670**

Dear Mr. Palen:

In accordance with Proposal Number PN060720 and subsequent signed Authorization to Proceed dated September 1, 2006, KTA-Tator, Inc. (KTA) has examined one previously tested filter sample (KTA Project No. 260605, Sample KTA-1), one debris sample, and one water sample to determine the composition and to assess the presence or absence of epoxy resin. This report describes the testing procedures employed and contains the results of the analysis.

### SAMPLES

The following samples were received from PPG/Keeler & Long on August 16, 2006:

Sample KTA-1 – One bag of solid chips, some gray and others gray on one side and beige on the other side, labeled “Debris from Bottom of Autoclave, TXU Report #06-0413.”

Sample KTA-2 – One 8 ounce bottle of pale yellow liquid labeled “TXU 307°F DBA 4-13-06 2155 PM.”

It should be noted that at no time did KTA personnel witness the acquisition of the above samples.

### SUMMARY

The beige and gray chips of Sample KTA-1 (“Debris from Autoclave”) were found to consist primarily of zinc, epoxy resin, china clay, titanium dioxide, and a small amount of calcium carbonate. The dried residue from Sample KTA-2 (liquid sample) was found to consist mainly of calcium carbonate and silicate material. The brown material extracted from the filter (KTA Project No. 260605, Sample KTA-1) was determined to consist of mostly china clay. The white material extracted from the same filter was found to consist of mainly silicate material (most likely silicone). Although trace amounts of aliphatic hydrocarbon material was evidenced by the small band near  $2900\text{ cm}^{-1}$ , epoxy resin was not detected in either the filter sample extracts or the liquid residue.

### **LABORATORY INVESTIGATION**

The laboratory investigation consisted of infrared spectroscopy of three samples and SEM-EDS of one sample. Particles were extracted from the filter sample (KTA Project No. 260605, Sample KTA-1) by removing the outermost layer of the filter, backwashing with deionized water, and collecting the rinsings into a beaker. The liquid portion of the rinsing was dried and remaining particles analyzed. Sample KTA-2 was dried and the residue was analyzed. Sample KTA-1 was tested as-received. The results of the analyses are provided below.

#### **Infrared Spectroscopy**

Infrared spectroscopic analysis was performed with a Mattson Galaxy Model 3020 fourier transform infrared spectrometer. The samples were prepared as described above, and sample scrapings were combined with potassium bromide powder and formed into pellets under high pressure. The pellets were then placed in the optical path of the spectrometer and spectra were obtained over the range of 4000 to 400  $\text{cm}^{-1}$ . Four spectra were obtained and are appended.

Briefly, the analysis revealed the following:

1. The spectrum obtained from the beige and gray chips of Sample KTA-1 ("Debris from Autoclave," Spectrum No. 1) was consistent with epoxy resin indicated by characteristic spectral bands near 1610, 1510, 1245, 1180, and 830  $\text{cm}^{-1}$ . The presence of china clay was indicated by spectral bands near 3694, 1100, 1030, 1010, 540, and 470  $\text{cm}^{-1}$ . The presence of titanium dioxide was indicated by the broad spectral band in the 700-500  $\text{cm}^{-1}$  region. A small amount of calcium carbonate was indicated by spectral bands near 1450 and 875  $\text{cm}^{-1}$ .
2. The spectrum obtained from the dried residue of Sample KTA-2 ("TXU" liquid sample, Spectrum No. 2) contained mostly calcium carbonate (indicated by spectral bands near 1430 and 875  $\text{cm}^{-1}$ ) and silicates (indicated by spectral bands in the 1100-1000  $\text{cm}^{-1}$  region). No epoxy resin was detected.
3. The spectrum obtained from the brown material extracted as described above from the previously tested filter sample (KTA Project No. 260605, Spectrum No. 3) contained mostly silicates, indicated by spectral bands in the 1100-1000  $\text{cm}^{-1}$ . The presence of china clay was indicated by spectral bands near 3694, 1030, 1010, 540, and 470  $\text{cm}^{-1}$ . The presence of titanium dioxide was indicated by the broad spectral band in the 700-500  $\text{cm}^{-1}$  region. The possible presence of zinc carbonate was indicated by spectral bands near 1510, 1380, and 830  $\text{cm}^{-1}$ . No epoxy resin was detected.
4. The spectrum obtained from the white material extracted as described above from the previously tested filter sample (KTA Project No. 260605, Spectrum No. 4) contained mostly silicates (most likely silicone), indicated by characteristic spectral bands near 2970, 1260, 1140, 1100, 1030, 800, 730, and 700  $\text{cm}^{-1}$ . No epoxy resin was detected.

#### **Scanning electron microscopy-energy dispersive x-ray spectroscopy (SEM-EDS)**

SEM-EDS was performed on Sample KTA-1 using a R. J. Lee scanning electron microscope equipped with an energy dispersive x-ray spectrometer. Sample preparation involved mounting a portion of the specimen as-received on a metallic stub. One microphotograph was obtained and is appended.

Briefly, the analysis revealed the following:

1. The elemental spectrum obtained from Sample KTA-1 ("Debris from Autoclave") revealed the composition to be carbon, oxygen, aluminum, silicon, titanium, and zinc.

Sample KTA-1, 15X

The above pictorial reference contain three quadrants. The upper left quadrant contains the view of the sample. The right upper quadrant is the portion of the sample analyzed. The bottom quadrant contains the spectrographs of the elemental analysis.
