**RE: DOCKET 03-005222 - AMENDMENT TO RADIOACTIVE MATERIAL LICENSE #29-00139-02**

Dear Ms. Ullrich:

E. R. Squibb & Sons, a wholly owned subsidiary of Bristol-Myers Squibb Company, has been granted radioactive material license #29-00139-02 which authorizes possession and use of radioactive materials at three New Jersey facilities: the New Brunswick facility (at One Squibb Drive, New Brunswick, NJ), the Lawrenceville facility (at Route 206 and Provinceline Road, Lawrenceville, NJ), and the Hopewell facility (at 311 Pennington-Rocky Hill Road, Pennington, NJ).

E.R. Squibb & Sons hereby requests an amendment to its license to modify the minimum acceptable air flow for laboratory fume hoods. Specifically, our license application dated February 18, 1997 incorporates USNRC Regulatory Guide 8.21 *Health Physics Surveys for Byproduct Material at NRC Licensed Processing and Manufacturing Plants* with regard to ventilation surveys. The guidance indicates a minimum face velocity of 100 feet per minute for fume hoods averaged over five points, but is specific to manufacturing operations.

When our license renewal was submitted in 1997, manufacturing operations were still active at our New Brunswick facility. These operations terminated in 2001.

Currently, our license is limited to research and development activities. Therefore, we wish to amend our license to allow laboratory fume hoods to operate at an average of range of 80 – 110 feet per minute. This ventilation flow rate range is in agreement with current accepted practice for laboratory fume hoods as specified by the American Society of Heating, Refrigerating and Air-Conditioning Engineers (ASHRAE).

If you require additional information, please contact Michael Vala at [Michael.vala@bms.com](mailto:Michael.vala@bms.com) or (732) 227-5096.

Sincerely,

Michael J. Vala, CHP  
Radiation Safety Officer/Manager, EHS
