RE: Request for Amendment
License 06-30007-01 (Current Amendment No. 14)
Docket No. 030-33025

Prompt Attention Requested

Dear Sir or Madame:

This is an application for a **one-time amendment** of this license.

Our client has sold two old rolling mills to an overseas company. The mills each contain a 1 Curie Am-241 source as part of a thickness gauge. The client has made arrangements with Los Alamos National Laboratory (LANL) to recover these sources, but LANL requires that an appropriately licensed person remove the sources from the devices prior to packaging and shipping. LANL is providing the shipping containers.

Paragraphs 6J and 9J of our license permit us to remove sources from devices up to a maximum activity of 60 mCi per source, 120 mCi total. Our client is not able to locate another consulting company in the general geographical area who is licensed to do this work, and the Los Alamos pickup is scheduled for mid-February. We would remove the sources, place them in their shipping containers, put the containers in secure storage and post the area "Caution Radioactive Material" in preparation for LANL to pick them up.

Please increase the quantity limit in Paragraph 6J of our license to read "1 Curie per source, 2 Curies total" for this one-time job.

140005

NUCLEAR MATERIALS-002

We commit to performing this removal service in accordance with the instructions and diagrams in the gauge manufacturer's technical manual if it is available. If no manual is available we would rely on our experience with similar gauges to perform the removal.

Please contact me immediately if you need clarification or additional information.

Sincerely,

A handwritten signature in black ink, appearing to read "K. Paul Steinmeyer", with a long horizontal flourish extending to the right.

K. Paul Steinmeyer, RRPT
President and Radiation Safety Officer
RSA Laboratories, a Division of
Radiation Safety Associates, Inc.
