Gentlemen:

In the Matter of )  
Tennessee Valley Authority )

Docket No. 50-259

**BROWNS FERRY NUCLEAR PLANT (BFN) - UNIT 1 - SUPPLEMENTAL  
RELOAD LICENSING REPORT (SRLR) - CYCLE 7 - 105% POWER  
OPERATION**

By letter dated September 22, 2006 (ADAMS Accession No. ML062680459), TVA submitted a supplement to the original June 28, 2004 (ML041840109) extended power uprate (EPU) license application for BFN Unit 1. The original EPU license application is for operation at 120% of original licensed thermal power (OLTP). The September 22, 2006, amendment supplement provides for interim Unit 1 operation at 105% of OLTP until such time as certain steam dryer analyses and other remaining licensing activities associated with EPU (120%) operation can be completed and approved by NRC.

In support of the September 22, 2006, supplement, TVA stated that a SRLR would be generated to reflect the interim (105%) power level as delineated in NEDE-24011-P-A, "General Electric Standard Application for Reactor Fuel." The Enclosure to this letter provides the SRLR for BFN Unit 1 Cycle 7 operation at 105% operation and presents the results of the cycle-specific core analyses, including the transient and accident analyses. This SRLR was prepared by Global Nuclear Fuel for TVA, and has been reviewed and

accepted by TVA. An SRLR for EPU (120%) operation was previously submitted on May 15, 2006 (ML061450390).

There are no new regulatory commitments associated with this submittal. If you have any questions about this submittal, please contact me at (256) 729-2636.

Sincerely,

A handwritten signature in cursive script, reading "William D. Crouch".
