Subject: Re: FYI - U-1 SFP activity

Dear Tim,

Thanks for the graphs. I am covering a refueling outage at Fitzpatrick this week, but I do have the Part 61 data on the Unit 1 SFP back at my office. By the time I get back, I'm sure Chris English will already provide that info. Thanks for requesting a more current full spectrum analysis since demineralization of the water. That selective removal of isotopes can be expected to skew the radionuclide percentages. Thanks, again.

Regards,

Jim

Jim,

We received the attached set of graphs from Chris English based upon a request from me for a history of pool concentrations since the spring, and the current inventory in the U-1 SFP. Chris is also looking up the last "Part-61" analyses for the pool and will provide them to me as soon as they are located. Also, based upon our request for a current inventory, they are going to submit additional samples for new Part-61 values. The turnaround is a min of 45 days.

I will forward the Part-61 analyses to you as I get them.

Tim
