

Licensee proposal

Where used in Section 3.3.1.1, the term, "familiarization with plant fire prevention procedures, fire reporting, and plant emergency alarms," shall be considered to be equivalent to that information presented in the plant's approved General Employee Training (GET). Specific training objectives should include;

- State individual responsibilities regarding fire barriers such as fire dampers, doors, and seals.
- State actions an individual is required to take upon discovery of a fire.
- State individual responsibilities regarding the control of fire loading(wood, solvents, oil) and the disposal of flammable materials.
- State examples of the types of hot work requiring a permit.
- Recognize and state the response to a station fire alarm

Staff Response

The NRC has the following comments and suggestions on this FAQ.

First, the NRC does not approve GET programs. The word "approve" has been removed from the suggested text below..

Second, the submittal, as proposed, could be interpreted to mean that GET programs are acceptable, which is only the case when the GET programs meet the requirements of NFPA 805. Therefore, AFB is proposing that FAQ 06-0028, Rev. 0 be revised to read:

Where used in Section 3.3.1.1(1), the term, "familiarization with plant fire prevention procedures, fire reporting, and plant emergency alarms," should be considered to be acceptable when it includes the minimum following training objectives;

- Where to find and how to use plant fire prevention procedures. [added based on the text of 3.3.1.1(1) – *familiarization with plant fire prevention procedures*]
- The individual's responsibilities regarding fire barriers such as fire dampers, doors, and seals. [from proposed FAQ]
- The actions an individual is required to take upon discovery of a fire. [from proposed FAQ]
- The individual's responsibilities regarding the control of transient combustibles (wood, solvents, oil) and the disposal of flammable and combustible materials. [clarification of proposed FAQ]
- Examples of the types of hot work that requires a permit. [from proposed FAQ]
- Familiarization and the proper response to various station fire alarms.[based on proposed FAQ]

- Other plant specific fire prevention activities. [to ensure that special cases are addressed.]

This familiarization may be included as part of the plant's General Employee Training (GET) program.
