IN REPLY REFER TO:
 AMSEL-RD-AD

21 May 1964

Atomic Energy Commission
 Germantown, Maryland

Gentlemen:

Inclosed are ten (10) copies of USAELRDL Memorandum Number 385-5, which is currently being used in the Laboratories as a guide for the prevention and control of radiation hazards.

Memorandum Number 385-5, dated 17 February 1964, supersedes Memorandum Number 385-5, dated 27 January 1961, and contains several important changes which will enable the Laboratories to maintain greater control over radioisotopes and ionizing radiation. The changes were made after a lengthy study of previous operating procedures by members of the Isotopes Committee and the users themselves.

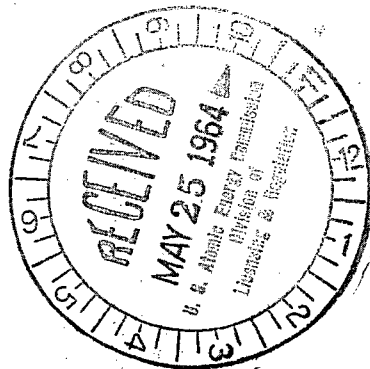

It is hoped that this Memorandum will provide adequate information regarding the type of radiological program being conducted at the Laboratories and the objectives that are being sought after from the policies contained therein.

Sincerely yours,

Ernest J. Fina

ERNEST J. FINA
