Subject: Public comment on environmental impact of V.Y. license extension to year 2022

In the intent of safe clean energy we have the opportunity to pursue numerous energy sources. Why worry about nuclear energy? What is the problem with making more nuclear waste? It takes up to 250,000 years to decompose to safe levels and it causes cancer and genetic defects if it leaks in to our air and water. There are there realistic energy alternatives to coal or nuclear power: In Iceland geothermal, in Denmark windmills, hydroelectric on rivers around the world, etc...

Sincerely,

George Iselin
