Re: Sims Hugo Neu East LLC
Change in Permit # 29-18363-01

Dear Mr. Cordamish;

Sims Hugo Neu East LLC would like to advise the US Nuclear Regulatory Commission of a change in permit information (#29-18363-01). One of our devices, the Kevex Model 0202, has been decommissioned by Radiac Research Corp. as of May 5th 2005. Attached is the Leak Test and proof of sealed source receipt from John Harrison Radiation Safety, as well as the bill of lading from Radiac. If you require further documentation please let me know and we would be happy to provide them.

At this time we only possess one device, the Niton XL. This device has a placard attached referencing coverage under a general license (10 CFR Sec. 31.5). After our conversation on March 6th, 2007 it was realized that it is now no longer necessary to hold the current Materials License. Please amend your records as necessary.

Please feel free to contact me at 201-577-3228, if you have any questions or comments.

Thank you.

Sincerely,
SIMS HUGO NEU EAST, LLC

Veronica Smyth
Environmental, Health & Safety Administrator

Receipt of radioactive sealed sources

A Kevex radioactive source, model 0202, serial number 4516
containing 3 pellets (7 mCi each) of Am-241 &
3 pellets (7 mCi each) of Cd-109 (as of 1 Feb, 1997)
was shipped from your facility and was received by me on 08 June, 2005.

All of the radioactive materials will be properly reused, stored, or disposed of
in accordance with California radioactive materials license number 1655-31,
a copy of which has been provided to you.

NOTICE:
Save this certificate !

Most regulatory agencies require that you leak-test your sealed radioactive source before you use it & at six month intervals thereafter. You may be asked to show proof of compliance during an inspection by the regulatory agency.

*** Leak Test Certificate ***

Leak test samples are obtained using a "KVX-L-TEST" or "JH-7" leak test kit as authorized by California Radioactive Materials License, # 1655-31

The sealed source(s) noted below was/were checked for leakage by wiping the source(s) and the holder assembly with a moistened swab which was then analyzed for contamination using a window-less gas-flow proportional counter. The test showed less than 0.001 microCuries of leakage (contamination). The maximum allowable leakage is 0.005 microCuries.

----- This radioactive sealed source **passes** the leak-test -----

Source serial #	Activity, Isotope, and Assay Date	Activity, Isotope, and Assay Date	Leak test Collected by:	Leak test Analyzed by:	Leak test Due Date
4516	21 mCi of Cd109 as of 1 Feb 97	21 mCi of Am241 as of 1 Jul 89	John Harrison on 08 Jun 05	John Harrison on 08 Jun 05	08 Dec 2005
