**SUBJECT: TXU GENERATION DEVELOPMENT – NUBUILD PROGRAM
SELECTION OF US-APWR FOR NEW PLANTS
PROJECT NO. 0754**

As we previously announced in our letter to you of January 18, 2007, TXU has been preparing Combined License (COL) applications per 10 CFR Part 52. TXU has evaluated the available reactor technologies and potential sites suitable for nuclear plant construction and operation. As part of our goal to move forward with the potential development of two to six gigawatts of new nuclear facilities, TXU has chosen Mitsubishi Heavy Industries, Ltd.'s (MHI) US-APWR reactor as its technology of choice.

We plan to submit COL applications to install two of the new units (3,200 net MWe expected capacity) at the Comanche Peak Steam Electric Station (CPSES); also, we are investigating the installation of two or three additional units at a separate site.

We hope this letter assists you in your resource planning for new plant evaluation and in particular for allocation of resources to MHI's US-APWR design certification. We are available to meet with you at your convenience to discuss our nuclear generation development plans further.
