Subject: composite plume/GW flow maps including lafarge wells and quarry

Hi John,

The maps that we promised you at our last meeting are now up on the ftp site [REDACTED] as it has been in the past. In addition to the two maps we promised (max Sr plume and GW flow/tidal response) I have also added a max H3 plume map. These maps each include a number of overlays to show how the individual disparate data sets relate to each other, and thus support our collective understanding of the Conceptual Site Model for the IPEC site. You will also find on the maps a clearer portrayal of our understanding of the "storm drain pipe source" of the Sr plume in the unit 3 area.

Hope this helps with your analysis
