Discussion with John J. Chorzelski, (JC) M.S. New RSO

The reviewer spoke to JC on 3/21/07 to discuss their possession limits of iridium-192 since they exceeded IC thresholds.

According to JC, they never received, possessed, or used iridium-192 in HDR units and requested that they be removed.

The licensee submitted this request in writing in letter dated March 22, 2007. The license no longer authorizes IC levels that exceed the IC thresholds. However, the license is still marked since 35.400 authorization allows up to 4 curies of any 35.400 material.

James Mullauer, 3/23/07
