Subject: EA is inadequate and I Reject Nuclear Irradiation of Food

NRC Chief Rules Review Mail Stop T6-D59

Dear NRC Mail Stop T6-D59,

These comments refer to Docket No. 030-36974

I do not support building another food irradiator in Hawai'i. I reject the concept of radioactively treating food products for consumption.

I support Earthjustice's and KAHEA's position that the Environmental Assessment is seriously flawed and inadequate.

I believe that the proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident.

I do am not convinced that there are no viable alternatives available. There are only 3 food irradiators, so it is clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I believe irradiation is an unacceptable technology for many reasons.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely,
Ed Schlegel

Subject: EA is inadequate and I Reject Nuclear Irradiation of Food

12/28/06
71 FR 78231

NRC Chief Rules Review Mail Stop T6-D59

Dear NRC Mail Stop T6-D59,

These comments refer to Docket No. 030-36974

I do not support building another food irradiator in Hawai'i. I reject the concept of radioactively treating food products for consumption.

I support Earthjustice's and KAHEA's position that the Environmental Assessment is seriously flawed and inadequate.

I believe that the proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident.

I do am not convinced that there are no viable alternatives available. There are only 3 food irradiators, so it is clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I believe irradiation is an unacceptable technology for many reasons.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely,
Lin Moore

I believe irradiation is an unacceptable technology for many reasons.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely,
Joseph Bateman

NRC Chief Rules Review Mail Stop T6-D59

Dear NRC Mail Stop T6-D59,

These comments refer to Docket No. 030-36974

I do not support building another food irradiator in Hawai'i. I reject the concept of radioactively treating food products for consumption.

I support Earthjustice's and KAHEA's position that the Environmental Assessment is seriously flawed and inadequate.

I believe that the proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident.

I do am not convinced that there are no viable alternatives available. There are only 3 food irradiators, so it is clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I believe irradiation is an unacceptable technology for many reasons.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely,
Mel S Stark

NRC Chief Rules Review Mail Stop T6-D59

Dear NRC Mail Stop T6-D59,

These comments refer to Docket No. 030-36974

I do not support building another food irradiator in Hawai'i. I reject the concept of radioactively treating food products for consumption.

I support Earthjustice's and KAHEA's position that the Environmental Assessment is seriously flawed and inadequate.

I believe that the proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident.

I believe there are viable alternatives available. There are only 3 food irradiators, so it is clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I believe irradiation is an unacceptable technology and reject anything nuclear.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic risk and should promote organically grown produce.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i.

Mahalo for considering the importance of protecting public health, and our fragile island resources. Our first priority is to protect our land and water by resisting anything that can potentially poison it for the sake of economic gain or convenience. Irradiating food for export is not on my list and should not be on anyone's list of priorities.

Sincerely,
Paulette Hedemark
91-1029 Kaikohola St.

NRC Chief Rules Review Mail Stop T6-D59

76

Dear NRC Mail Stop T6-D59,

These comments refer to Docket No. 030-36974

I do not support building another food irradiator in Hawai'i. I reject the concept of radioactively treating food products for consumption.

I support Earthjustice's and KAHEA's position that the Environmental Assessment is seriously flawed and inadequate.

I believe that the proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident.

I do am not convinced that there are no viable alternatives available. There are only 3 food irradiators, so it is clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I believe irradiation is an unacceptable technology for many reasons.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely,
Jon Schmitz

NRC Chief Rules Review Mail Stop T6-D59

86

Dear NRC Mail Stop T6-D59,

These comments refer to Docket No. 030-36974

I do not support building another food irradiator in Hawai'i. I reject the concept of radioactively treating food products for consumption.

I support Earthjustice's and KAHEA's position that the Environmental Assessment is seriously flawed and inadequate.

I believe that the proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident.

I do am not convinced that there are no viable alternatives available. There are only 3 food irradiators, so it is clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I believe irradiation is an unacceptable technology for many reasons.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely,
Dick Miller

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely,
Forest Shomer

NRC Chief Rules Review Mail Stop T6-D59

Dear NRC Mail Stop T6-D59,

These comments refer to Docket No. 030-36974

I do not support building another food irradiator in Hawai'i. I reject the concept of radioactively treating food products for consumption.

I support Earthjustice's and KAHEA's position that the Environmental Assessment is seriously flawed and inadequate.

I believe that the proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident.

I do am not convinced that there are no viable alternatives available. There are only 3 food irradiators, so it is clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I believe irradiation is an unacceptable technology for many reasons.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely,
Federico Retes

NRC Chief Rules Review Mail Stop T6-D59

105

Dear NRC Mail Stop T6-D59,

These comments refer to Docket No. 030-36974

I do not support building another food irradiator in Hawai'i. I reject the concept of radioactively treating food products for consumption.

I support Earthjustice's and KAHEA's position that the Environmental Assessment is seriously flawed and inadequate.

I believe that the proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident.

I do am not convinced that there are no viable alternatives available. There are only 3 food irradiators, so it is clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I believe irradiation is an unacceptable technology for many reasons.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely,
Ted Leon

NRC Chief Rules Review Mail Stop T6-D59

Dear NRC Mail Stop T6-D59,

These comments refer to Docket No. 030-36974

I do not support building another food irradiator in Hawai'i. I reject the concept of radioactively treating food products for consumption.

I support Earthjustice's and KAHEA's position that the Environmental Assessment is seriously flawed and inadequate.

I believe that the proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident.

I do am not convinced that there are no viable alternatives available. There are only 3 food irradiators, so it is clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I believe irradiation is an unacceptable technology for many reasons.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely,
Selina Heaton

NRC Chief Rules Review Mail Stop T6-D59

Dear NRC Mail Stop T6-D59,

These comments refer to Docket No. 030-36974

I do not support building another food irradiator in Hawai'i. I reject the concept of radioactively treating food products for consumption.

I support Earthjustice's and KAHEA's position that the Environmental Assessment is seriously flawed and inadequate.

I believe that the proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident.

I am not convinced that there are no viable alternatives available. There are only 3 food irradiators, so it is clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I believe irradiation is an unacceptable technology for many reasons. First and foremost, irradiation forms chemicals known or suspected to cause cancer and birth defects. One chemical, 2-ACBs, has been linked to cancer development in rats and genetic damage in human cells.

Irradiation can mask filthy conditions in today's mega-sized livestock slaughterhouses and food processing plants, where E. coli, Salmonella and other potentially deadly food-borne pathogens thrive in meat contaminated with feces, urine and pus.

Many serious health problems have been observed in lab animals fed irradiated foods, including premature death, cancer, tumors, stillbirths, mutations, organ damage, immune system failure and stunted growth. In one experiment, genetic damage was detected in young children who ate irradiated wheat.

Irradiation destroys vitamins, protein, essential fatty acids and other nutrients up to 80 percent of vitamin A in eggs and half the beta carotene in orange juice.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our

farmers at economic.

Last but not least, irradiation can ruin the flavor, odor and texture of food, sometimes disgustingly so. Zapped foods can taste and smell like a wet dog, burnt feathers or hair and rancid fat.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

NRC Chief Rules Review Mail Stop T6-D59

12-28-06
71 FR 78231

Dear NRC Mail Stop T6-D59,

These comments refer to Docket No. 030-36974

124

I do not support building another food irradiator in Hawai'i. I reject the concept of radioactively treating food products for consumption.

I support Earthjustice's and KAHEA's position that the Environmental Assessment is seriously flawed and inadequate.

I believe that the proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident.

I do am not convinced that there are no viable alternatives available. There are only 3 food irradiators, so it is clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I believe irradiation is an unacceptable technology for many reasons.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely,
Stephanie Kowalski

Subject: EA is inadequate and I Reject Nuclear Irradiation of Food

NRC Chief Rules Review Mail Stop T6-D59

12-28-06
71 FR 78231

Dear NRC Mail Stop T6-D59,

These comments refer to Docket No. 030-36974

134

I do not support building another food irradiator in Hawai'i. I reject the concept of radioactively treating food products for consumption.

I support Earthjustice's and KAHEA's position that the Environmental Assessment is seriously flawed and inadequate.

I believe that the proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident.

I do am not convinced that there are no viable alternatives available. There are only 3 food irradiators, so it is clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I believe irradiation is an unacceptable technology for many reasons.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely,
Katie Winchell

71 FR 78231

Dear NRC Mail Stop T6-D59,

These comments refer to Docket No. 030-36974

138

I do not support building another food irradiator in Hawai'i. I reject the concept of radioactively treating food products for consumption. I am asking that more study into learning and using the agricultural expertise of the ancient Hawaiians as an alternative to radiation poisoning. Studies have shown how modern technology can and does interfere with the balance of the ecosystem.

I support Earthjustice's and KAHEA's position that the Environmental Assessment is seriously flawed and inadequate.

I believe that the proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident.

I do am not convinced that there are no viable alternatives available. There are only 3 food irradiators, so it is clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely,
Vicki Fosbender

NRC Chief Rules Review Mail Stop T6-D59

12/28/06
71 FR 78231

Dear NRC Mail Stop T6-D59,

144

These comments refer to Docket No. 030-36974

I do not support building another food irradiator in Hawai'i. I reject the concept of radioactively treating food products for consumption.

I support Earthjustice's and KAHEA's position that the Environmental Assessment is seriously flawed and inadequate.

I believe that the proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident.

I do am not convinced that there are no viable alternatives available. There are only 3 food irradiators, so it is clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I believe irradiation is an unacceptable technology for many reasons.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely,
Suki Ewers

NRC Chief Rules Review Mail Stop T6-D59

Dear NRC Mail Stop T6-D59,

These comments refer to Docket No. 030-36974

I do not support building another food irradiator in Hawai'i. I reject the concept of radioactively treating food products for consumption.

I support Earthjustice's and KAHEA's position that the Environmental Assessment is seriously flawed and inadequate.

I believe that the proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident. And I would point out, that recent seismic activity on the island of Oahu indicates that the proposed location could also be subject o earthquake activity.

I do am not convinced that there are no viable alternatives available. There are only 3 food irradiators, so it is clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I believe irradiation is an unacceptable technology for many reasons.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

NRC Chief Rules Review Mail Stop T6-D59

Dear NRC Mail Stop T6-D59,

These comments refer to Docket No. 030-36974

I do not support building another food irradiator in Hawai'i. I reject the concept of radioactively treating food products for consumption.

I support Earthjustice's and KAHEA's position that the Environmental Assessment is seriously flawed and inadequate.

I believe that the proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident.

I do am not convinced that there are no viable alternatives available. There are only 3 food irradiators, so it is clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I believe irradiation is an unacceptable technology for many reasons.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely,
Becky Moylan

NRC Chief Rules Review Mail Stop T6-D59

Dear NRC Mail Stop T6-D59,

These comments refer to Docket No. 030-36974

163

I do not support building another food irradiator in Hawai'i. I reject the concept of radioactively treating food products for consumption.

I support Earthjustice's and KAHEA's position that the Environmental Assessment is seriously flawed and inadequate.

I believe that the proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident.

I do am not convinced that there are no viable alternatives available. There are only 3 food irradiators, so it is clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I believe irradiation is an unacceptable technology for many reasons.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely,
Nina Puhipau

I support Earthjustice's and KAHEA's position that the Environmental Assessment is seriously flawed and inadequate.

I believe that the proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident.

I do am not convinced that there are no viable alternatives available. There are only 3 food irradiators, so it is clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I believe irradiation is an unacceptable technology for many reasons.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely,
Sandrine Libby

Subject: EA is inadequate and I Reject Nuclear Irradiation of Food

NRC Chief Rules Review Mail Stop T6-D59

12/28/06
71 FR 78231

Dear NRC Mail Stop T6-D59,

182

These comments refer to Docket No. 030-36974

I do not support building another food irradiator in Hawai'i. I reject the concept of radioactively treating food products for consumption.

I support Earthjustice's and KAHEA's position that the Environmental Assessment is seriously flawed and inadequate.

I believe that the proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident.

I am not convinced that there are no viable alternatives available. There are only 3 food irradiators, so it is clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I believe irradiation is an unacceptable technology for many reasons.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic risk.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely,
Carolyn Moore

Subject: EA is inadequate and I Reject Nuclear Irradiation of Food

NRC Chief Rules Review Mail Stop T6-D59

Dear NRC Mail Stop T6-D59,

These comments refer to Docket No. 030-36974

I do not support building another food irradiator in Hawai'i. I reject the concept of radioactively treating food products for consumption.

I support Earthjustice's and KAHEA's position that the Environmental Assessment is seriously flawed and inadequate.

I believe that the proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident.

I do am not convinced that there are no viable alternatives available. There are only 3 food irradiators, so it is clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I believe irradiation is an unacceptable technology for many reasons.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely,
Kathy Farley

71 FR 78231

NRC Chief Rules Review Mail Stop T6-D59

Dear NRC Mail Stop T6-D59,

Please note that these comments refer to Docket No. 030-36974:

198

I am strongly opposed to building another food irradiator in Hawai'i. I reject the concept of radioactively treating food products for consumption.

I support Earthjustice's and KAHEA's position, both intellectually and financially, and agree that the Environmental Assessment is seriously flawed and inadequate.

The proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident.

I do am not convinced that there are no viable alternatives available. Food irradiation, put simply, is unnatural and does not work. There It is clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I believe irradiation is an unacceptable technology for many reasons.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo nui loa for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely, Claire Sanders

Dear NRC Mail Stop T6-D59,

These comments refer to Docket No. 030-36974

201

I do not support building another food irradiator in Hawai'i. I reject the concept of radioactively treating food products for consumption.

I support Earthjustice's and KAHEA's position that the Environmental Assessment is seriously flawed and inadequate.

I believe that the proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident.

I do am not convinced that there are no viable alternatives available. There are only 3 food irradiators, so it is clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I believe irradiation is an unacceptable technology for many reasons.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely,
Dr. Fred Dodge

NRC Chief Rules Review Mail Stop T6-D59

Dear NRC Mail Stop T6-D59,

These comments refer to Docket No. 030-36974

206

I do not support building another food irradiator in Hawai'i, not to mention next to the airport in a tsunami zone. I reject the concept of radioactively treating food products for consumption.

I support the position of Earthjustice and KAHEA's that the Environmental Assessment is seriously flawed and inadequate.

I believe that the proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident.

Other viable alternatives are available. objectionable methods.

I do not believe that irradiated foods or irradiation as a technology are economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated. We do not want to put our farmers at economic risk.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation --including the threats posed by placing the proposed installation in a tsunami zone next to an airport, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely,
Stephanie Fried

Subject: EA is inadequate and I Reject Nuclear Irradiation of Food

12/28/06
71 FR 78231

NRC Chief Rules Review Mail Stop T6-D59

Dear NRC Mail Stop T6-D59,

(211)

These comments refer to Docket No. 030-36974

I do not support building another food irradiator in Hawai'i. I reject the concept of radioactively treating food products for consumption.

I support Earthjustice's and KAHEA's position that the Environmental Assessment is seriously flawed and inadequate.

I believe that the proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident.

I do am not convinced that there are no viable alternatives available. There are only 3 food irradiators, so it is clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I believe irradiation is an unacceptable technology for many reasons.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely,
patrice tullai

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely,
Melinda Ahn

NRC Chief Rules Review Mail Stop T6-D59

12/28/06
71 FR 78231

Dear NRC Mail Stop T6-D59,

These comments refer to Docket No. 030-36974

221

I do not support building another food irradiator in Hawai'i. I reject the concept of radioactively treating food products for consumption.

I support Earthjustice's and KAHEA's position that the Environmental Assessment is seriously flawed and inadequate.

I believe that the proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident.

I do am not convinced that there are no viable alternatives available. There are only 3 food irradiators, so it is clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I believe irradiation is an unacceptable technology for many reasons.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely,
David Meanwell

Subject: EA is inadequate and I Reject Nuclear Irradiation of Food

NRC Chief Rules Review Mail Stop T6-D59

12/28/06
71 FR 78231

Dear NRC Mail Stop T6-D59,

These comments refer to Docket No. 030-36974

230

I do not support building another food irradiator in Hawai'i. I reject the concept of radioactively treating food products for consumption.

I support Earthjustice's and KAHEA's position that the Environmental Assessment is seriously flawed and inadequate.

I believe that the proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident.

I do am not convinced that there are no viable alternatives available. There are only 3 food irradiators, so it is clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I believe irradiation is an unacceptable technology for many reasons.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely,
Garylavalink@hawaii.rr.com Goo

Subject: EA is inadequate and I Reject Nuclear Irradiation of Food

NRC Chief Rules Review Mail Stop T6-D59

12/28/06
71 FR 78231

Dear NRC Mail Stop T6-D59,

These comments refer to Docket No. 030-36974

(240)

I do not support building another food irradiator in Hawai'i. I reject the concept of radioactively treating food products for consumption.

I support Earthjustice's and KAHEA's position that the Environmental Assessment is seriously flawed and inadequate.

I believe that the proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident.

I do am not convinced that there are no viable alternatives available. There are only 3 food irradiators, so it is clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I believe irradiation is an unacceptable technology for many reasons.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely,
JANICE BRENCIK

I do am not convinced that there are no viable alternatives available. There are only 3 food irradiators, so it is clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I believe irradiation is an unacceptable technology for many reasons.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely,
Kasey Givens

NRC Chief Rules Review Mail Stop T6-D59

12/28/06
76 FR 78231

Dear NRC Mail Stop T6-D59,

250

These comments refer to Docket No. 030-36974

I do not support building another food irradiator in Hawai'i. I reject the concept of radioactively treating food products for consumption.

I support Earthjustice's and KAHEA's position that the Environmental Assessment is seriously flawed and inadequate.

I believe that the proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident.

I do am not convinced that there are no viable alternatives available. There are only 3 food irradiators, so it is clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I believe irradiation is an unacceptable technology for many reasons.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely,
Elizabeth Mann

NRC Chief Rules Review Mail Stop T6-D59

Dear NRC Mail Stop T6-D59,

These comments refer to Docket No. 030-36974

I oppose building another food irradiator in Hawai'i. I reject the concept of radioactively treating food products for consumption.

I support Earthjustice's and KAHEA's position that the Environmental Assessment is seriously flawed and inadequate.

I believe that the proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident.

I do not think that there are no other viable alternatives available. There are only 3 food irradiators in the whole USA, so it's clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I believe irradiation is an unacceptable technology for many reasons.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at risk of more economic failure.

Although nuclear projects have been increasing the mass of deadly radioactive nuclear waste for over 50 years, no one in the world knows yet how to dispose of this menace safely. Therefore, the sanest plan is to stop using and moving deadly nuclear materials around.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Subject: EA is inadequate and I Reject Nuclear Irradiation of Food

NRC Chief Rules Review Mail Stop T6-D59

12/28/06
TL FR 78231

Dear NRC Mail Stop T6-D59,

259

These comments refer to Docket No. 030-36974

I do not support building another food irradiator in Hawai'i. I reject the concept of radioactively treating food products for consumption.

I support Earthjustice's and KAHEA's position that the Environmental Assessment is seriously flawed and inadequate.

I believe that the proposed irradiator facility poses a significant threat to the environment and to human health, especially in the event of a tsunami or airplane accident.

I do am not convinced that there are no viable alternatives available. There are only 3 food irradiators, so it is clear that food can be treated for pests and bacteria using less dangerous and objectionable methods.

I believe irradiation is an unacceptable technology for many reasons.

I do not believe that irradiated foods or irradiation as a technology is economically viable. The public has consistently refused to purchase irradiated food. The last irradiator went bankrupt due to lack of market for the food products that had been treated with radioactive waste. We do not want to put our farmers at economic.

For these reasons, I encourage Governor Lingle to reject the NRC's proposal to build a nuclear food facility anywhere in Hawai'i and if this project is to move forward, I call for full environmental assessment of irradiation, alternatives, and the economics.

Mahalo for considering the importance of protecting public health, our economy and our fragile island resources.

Sincerely,
Katy Fogg
