Main Office Inspection Next Inspection Date: **March 2008**

Field _____

Temporary Job Site _____

PROGRAM SCOPE

Initial Inspection:

This small academic research program has not used or received licensed materials since the license was issued in April 2006. Two authorized users (Dr's Beam and Elick) intend to begin using microcurie quantities of phosphorous-32 in research involving *in vitro* labeling of proteins and nucleic acids in September 2007.

One laboratory is designated for licensed activities in accordance with submitted documentation. This area was toured and appears to be adequate for the proposed use. Other areas discussed during the inspection included: security, survey instruments, inventory logs, waste management, etc.

Interviews conducted with the RSO and one authorized user revealed an adequate level of understanding of emergency and material handling procedures and techniques.

NOTE: Since licensed materials have not been received, the next inspection should be performed in March 2008.
