NRC PROJECT #750
AMERENUE – CALLAWAY PLANT
PLANS FOR PURSUING ENVIRONMENTAL IMPACT STUDIES AND SITE
GEOTECHNICAL EXPLORATION TO SUPPORT COMBINED LICENSE -
(COLA) SUBMITTAL

Reference: Letter ULNRC-05354 dated December 15, 2006 and ULNRC 05363 dated January 26, 2007 to U.S. Nuclear Regulatory Commission.

The purpose of this letter is to advise the NRC that AmerenUE has entered into an agreement with UniStar Nuclear, LLC to assist us with development of a Combined Construction and Operating License (COL) application to be submitted to the NRC in the third quarter of 2008 for one additional nuclear unit. As stated in Reference letter ULNRC 05363, UniStar Nuclear will continue to be the authorized agent and primary point of contact between AmerenUE and the NRC regarding this project. The current UniStar Nuclear point of contact, both for telecommunication and written correspondence, is George Wrobel who can be contacted at (573) 771-3535 or george.wrobel@constellation.com. Written correspondence should be addressed to George Wrobel, 750 E. Pratt St., 14th Floor, Baltimore, MD 21202.

AmerenUE has selected the Areva EPR as the nuclear technology for the COLA and Paul C. Rizzo Associates, Inc. as the Contractor to perform the site Environmental and Geological studies. Activities associated with performing Environmental Impact Studies and site geotechnical sampling necessary to support a combined Construction and Operating Licenses are currently underway. These studies will include subsurface investigation, monitoring wells, and environmental sampling to determine suitability of a site for a new nuclear generation station.

This letter supersedes letter ULNRC-05354 dated December 15, 2006. Communications by AmerenUE to the public will occur on April 5, 2007.
