Dennis -

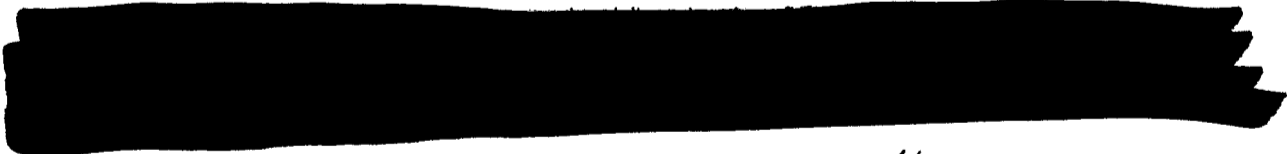

Regarding our telephone conversation, I have listed the maximum one-time radioisotope usage for Dr. Hantman and Mr. Ruvolo.

- Dr. Michael Hantman has used the following radioisotopes:
 - ³H - used in cell proliferation assays (~10 μCi)
 - ¹⁴C - Standard for Autoradiography (American Radiolabeled Chemicals, Inc.) (~0.02 mCi/strip)
 - ³⁵S - used in protein-labeling and DNA sequencing assays (~50 μCi)
 - ³²P - used in DNA/RNA probe-labeling assays (~500 μCi)
- Mr. Brian Ruvolo has used the following radioisotopes:
 - ¹⁴C - Standard for Autoradiography (American Radiolabeled Chemicals, Inc.) (~0.02 mCi/strip)
 - ³²P - used in DNA/RNA probe-labeling assays (~1.5 mCi)

If you need any other information, or clarification, please do not hesitate to contact me. Thank you for your assistance.

-Douglas B. Brown, Ph.D., RSO
