**DELIVERY ORDER DR-33-06-317  
TASK ORDER (T025)**

**MAJOR/HIGH SYSTEMS C&A: NRC System Information Control Database (NSICD)**

**1.0 OBJECTIVE**

The Contractor shall support the OIS in certification and accreditation of a major information system such that NRC is in compliance and maintains certification and accreditation currency with NIST and FISMA Guidance. The Contractor shall at a minimum develop associated certification and accreditation documentation consistent with the security support task referenced in SOW ENCLOSURE 6 of Delivery Order DR-33-06-317, entitled, "C&A PROCESS AND DELIVERABLES" such that an Authorization to Operate (ATO) which confers full accreditation shall be granted the system. The Contractor shall perform these security support tasks specified for a HIGH security baseline system.

The Contractor shall develop, at a minimum, the following information system security certification documentation: a risk assessment, a systems security plan, a security test and evaluation plan and associated report, a contingency test plan and report, a corrective action plan to correct any identified deficiencies, and a certification memo.

The Security Categorization and E-Authentication risk assessment have already been completed for NSICD.

**2.0 SCOPE OF WORK**

The Contractor shall provide security analyst staff and develop all requisite systems certification and accreditation documentation such that the NRC System Information Control Database (NSICD) obtains an Authorization to Operate (ATO) and does not cross fiscal year boundaries with an Interim Authorization to Operate (IATO).

**System Name:** NRC System Information Control Database (NSICD)

**Sponsor Office:** Office of Information Services (OIS)

**System Owner:** James Corbett, Director OIS/BPIAD

**System Description:** NSICD serves as the repository and management platform for the Agency's common security controls and system specific security controls. NSICD implements the Rational Enterprise Suite, which is a COTS product comprised of a number of software development productivity tools and the ClearCase application and database. In addition to ClearCase, the software tools include Rational Administrator, ClearQuest, RequisitePro, Software Documentation Automation (SoDA), and TestManager.

NSICD supports the Project Management Methodology (PMM), which is the Agency's adaptation of the IBM Rational Unified Process (RUP), and serves as the agency's Software Development Life Cycle Management (SDLCM) process. The system contains and helps to manage the Agency's inventory of automated information systems, IT security oversight information, and common security control elements in accordance with NIST SP 800-53. Furthermore, NSICD will track systems through the Certification and Accreditation (C&A) process as well as systems' Plans of Action and Milestones (POA&M).

**Status:** Currently operating under IATO

**3.0 PERIOD OF PERFORMANCE**

The period of performance of this task order is January 11, 2007 through September 30, 2007.

**4.0 FUNDING**

**GS35F0229K DR-33-06-317-T025**

- (a) The total estimated amount (ceiling) for the products/services ordered, delivered, and accepted under this task order is \$162,660.38.
- (b) The total amount presently obligated with respect to this task order is \$162,660.38. The Contractor shall not be obligated to incur costs above this ceiling/obligated amount unless and until the Contracting Officer shall increase the amount obligated. When and if the amount(s) paid and payable to the Contractor hereunder shall equal the obligated amount, the Contractor shall not be obligated to continue performance of the work unless and until the Contracting Officer shall increase the amount obligated with respect to this contract. Any work undertaken by the Contractor in excess of the obligated amount specified above is done so at the Contractor's sole risk.

**5.0 TRAVEL**

Travel will be required to all Regions and the Technical Training Center. A not to exceed (NTE) line item will be added for travel required for this effort at a later date. All travel will be reimbursed in accordance with DR-33-06-317, Section 4.3, Travel Requirements.

U.S. NRC Region I  
475 Allendale Road  
King of Prussia, PA 19406-1415

U.S. NRC Region II  
Sam Nunn Atlanta Federal Center, 23 T85  
61 Forsyth Street, SW  
Atlanta, GA 30303-8931

U.S. NRC Region III  
2443 Warrenville Road  
Suite 210  
Lisle, Illinois 60532-4352

U.S. NRC Region IV  
Texas Health Resources Tower  
611 Ryan Plaza, Suite 400  
Arlington, TX 76011-4005

U.S. Nuclear Regulatory Commission  
Technical Training Center  
Osborne Office Center  
5746 Marlin Road, Suite 200  
Chattanooga, TN 37411-5677

**6.0 SCHEDULE**

The Contractor shall provide final draft security documentation and reports for the NSICD consistent with the NRC-approved integrated project plan. The integrated security Activity Project Plan shall be delivered within one week of task order award.

**7.0 SPECIFIC TASKS**

The Contractor shall support the NRC C&A of NSCID as described below:

**MAJOR APPLICATION**

**1. Risk Assessment**

The assessment of risk and the development of system security plans are two important activities in an agency's information security program that directly support security accreditation and are required by the FISMA and OMB Circular A-130, Appendix III. Risk assessments influence the development of the security controls for information systems and generate much of the information needed for the associated system security plans.

The risk assessment shall characterize the information processed by using FIPS 199, Standards for Security Categorization of Federal Information and Information Systems and NIST SP 800-60, Guide for Mapping Types of Information and Information Systems to Security Categories. The risk assessment shall follow NIST SP 800-37 Guide for the Security Certification and Accreditation of Federal Information Systems, and include the following:

- Identification of user types and associated roles and responsibilities;
- Identification of risk assessment team members and their associations;
- A description of the risk assessment approach and techniques, where the techniques include documentation review, interviews, observation, and system configuration assessments, security scans and penetration tests;
- A description of the risk scale used, including at a minimum, the potential impact as defined in FIPS 199, and likelihood as defined in NIST SP 800-30, Risk Management Guide for Information Technology Systems;
- A list of potential system vulnerabilities;
- A list of potential threat-sources applicable to the system, including natural, human, and environmental threat-sources;
- A table of vulnerability and threat-source pairs and observations about each;
- Detailed findings for each vulnerability and threat-source pair discussing the possible outcome if the pair is exploited; existing controls to mitigate the pair; the likelihood determination as high, moderate, or low; the impact determination expressed as high, moderate, or low; the overall risk rating based upon the risk scale; and the recommended controls to mitigate the risk; and,
- A summary that includes the number of high, moderate, and low findings and provides a list of prioritized action items based upon the findings.

The risk assessment shall be documented in a report that follows the NRC Template for the Risk Assessment Report. The report shall be delivered in draft form and then in final form after NRC comments are incorporated. The NRC IT Security staff review of the draft is required to ensure compliance. The NRC Senior IT Security Officer must approve the final to enable system accreditation.

The Contractor will track any residual risk in the plan of action and milestones (POA&M). The Contractor shall document the results of the process. This shall include documenting the risk number, a description of each risk, the type of risk (i.e., impacting the confidentiality, integrity, or availability), the level of risk (i.e., low, moderate, or high), the associated controls, and the action(s) required or actually performed to eliminate or minimize each risk. The goal is for NRC and Contractor personnel to remediate all high and moderate security findings, and track the remaining security findings in the POA&M.

The Contractor shall be responsible for coordinating and executing all applicable site access and non-disclosure agreements with parties other than the Nuclear Regulatory Commission prior to commencement of the above mentioned activities, ensuring that project schedules are not impacted.

## **2. Systems Security Plan (SSP)**

The security plan shall be developed in accordance with NIST SP 800-53 Recommended Security Controls for Federal Information Systems, NIST SP 800-37 Guide for the Security Certification and Accreditation of Federal Information Systems, and the NRC IT Security Plan Template. The Contractor shall identify within the SSP the necessary security controls required, citing the security controls that are in place, those that are planned, and those that are not applicable.

Where a system relies upon a control that is provided by another system (e.g. the NRC LAN/WAN), the specific control being relied upon shall be noted along with the name of the system providing that control. The Contractor

shall trace the security controls to specific documented guidance, NRC policy (e.g., Management Directives), infrastructure policy or procedures.

The system security plan shall be documented in a report that follows the NRC Template for System Security Plan. The report shall be delivered in draft form and then in pre-system ST&E form after NRC comments are incorporated. The NRC IT Security staff review of the draft is required to ensure compliance. The Contractor shall update the system security plan after completion of the ST&E test report to reflect validated in-place and planned controls. The NRC SITSO must approve the final to enable system accreditation.

### **3. System Security Controls and Security Requirements Support**

The Contractor shall support the NRC staff in the development and documentation of security controls and security requirements and associated technical resolutions, risk mitigation, and implementations within the Rational Suite Enterprise.

### **4. Review, Verification, and Validation of Security Controls and Requirements**

The Contractor shall review, verify, and validate all security controls and security requirements and associated technical resolutions, risk mitigation, and implementations contained within various NRC security and systems development documentation or the Rational Suite Enterprise such that confirmation that the system and associated controls are operating as intended.

### **5. Systems Security Controls and Security Requirements Test Plan Development Support**

The Contractor shall support the NRC staff in the development and documentation of a test plan within the Rational Suite Enterprise that exercises the systems security controls and security requirements and associated technical resolutions, risk mitigation, and implementations such that confirmation that the system and associated controls are operating as intended and in accordance with NIST SP 800-53 Recommended Security Controls for Federal Information Systems, NIST SP 800-37 Guide for the Security Certification and Accreditation of Federal Information Systems, and the NRC System Security Test and Evaluation Plan Template. The Contractor shall provide detailed test procedures to ensure all IT security functional and assurance requirements are fully tested. The procedures shall contain sufficient detail that a technically trained individual not familiar with the system can successfully follow the procedures.

The System Test and Evaluation (ST&E) plan shall identify all testing assumptions, constraints, and dependencies and include a proposed schedule that identifies which personnel, hardware, software, and other requirements that must be met for each portion of the schedule to accomplish full system security testing of all system security functional and assurance requirements where the requirements are not stated as being fulfilled by another system. The following test methods shall be used:

### **6. Review, Verification, and Validation of Security Controls and Requirements Test Plan and Test Plan Execution**

The Contractor shall independently review, verify, and validate all systems security test plans and procedures to ensure the accuracy and adequacy of documented test procedures for all systems security controls and security requirements and associated technical resolutions, risk mitigation, and implementations contained within various NRC security and systems development documentation or the Rational Suite Enterprise such that confirmation that the system and associated controls are operating as intended. The Contractor shall update the STE Plan after completion of the system security test and evaluation plan test report to reflect validated information. The NRC Senior IT Security Officer must approve the final to enable system accreditation.

### **7. Contingency Plan**

The Contractor shall support the NRC staff in the development and documentation of a contingency plan and test procedures within the Rational Suite Enterprise. The System Contingency Plan shall be documented in a report

generated from the Rational Suite Enterprise that follows the NRC Template for the System Contingency Plan. The Plan shall be maintained in its hard copy form for contingency execution should the Rational Suite Enterprise or NRC Network Infrastructure be unavailable. The contingency plan shall be developed in accordance with NIST SP 800-34 Contingency Planning Guide for Information Technology Systems, NIST SP 800-37 Guide for the Security Certification and Accreditation of Federal Information Systems, and the NRC Contingency Plan (CP) Template. The Contractor shall provide detailed procedures for the notification and activation phase, recovery operations, and return to normal operations. The procedures shall contain sufficient detail that a technically trained individual not familiar with the system can successfully follow the procedures. The system contingency plan shall also contain sufficient personnel contact information to enable contact at all times, vendor contact information to enable contact at all times, equipment (hardware and software) and specification information to enable reconstitution of the system from scratch, all service level agreements and memoranda of understanding, the IT standard operating procedures for the system, identification of any systems that this system is dependent upon along with references for the applicable contingency plans, references to the emergency management plan and occupant evacuation plan, and references to the appropriate continuity of operations plan.

The System Contingency Plan shall be documented in a report generated from the Rational Suite Enterprise that follows the NRC Template for System Contingency Plan. The report shall be delivered in draft form and then in pre-Test form after NRC comments are incorporated. The NRC IT Security staff review of the draft is required to ensure compliance. The Contractor shall update the system contingency plan after completion of the contingency plan test report to reflect validated information. The NRC Senior IT Security Officer must approve the final version to enable system accreditation.

#### **8. Contingency Planning Test and Report**

The Contractor shall provide expert advice and support during the Contingency Planning Test to ensure test plan documentation is compliant with the System Contingency Plan (CP) that has been approved by the NRC Senior Information Technology Security Officer (SITSO). Testing shall follow the test procedures developed and documented by the Contractor within the Rational Suite Enterprise. The Contractor shall document the testing in a System Contingency Test Report (CP Test Report). The CP Test Report shall be developed in accordance with NIST SP 800-34 Contingency Planning Guide for Information Technology Systems, NIST SP 800-37 Guide for the Security Certification and Accreditation of Federal Information Systems, and the NRC Contingency Test Report Template.

The CP Test shall be documented in a report that follows the NRC Template for NRC Contingency Test Report. The CP Test Report shall identify all testing assumptions, constraints, and dependencies as well as any anomalies, impromptu tests, and deviations encountered during testing. The CP Test Report shall include the actual testing schedule and detailed test results for each test procedure outlining specific errors encountered. The CP Test Report shall include a table of test findings incorporating any test issues and recommendations. The CP Test Report shall identify any problems encountered during testing and identify the resulting action items for the system. The CP Test Report shall be delivered in draft form and then in final form after NRC comments are incorporated. The NRC SITSO must approve the final CP Test Report to enable system accreditation.
