Subject: Response to Notice of Violation 1A-07-002

Dear Nuclear Regulatory Commission,

My response to the notice of violation, being that I did not have the 16ci IR 192 source of radiation secure and not having my daily survey sheet filled out correctly, is that I was careless in my action to secure the radioactive source and to fill out my daily survey sheet. The corrective actions that were taken was that me and my assistant were taken off the job and told by Accurate NDE to not let something like this to happen again. No terminations were taken by Accurate NDE. When I returned to the job much later, I found that there was another darkroom with a lock and key so that I may secure the camera in the darkroom.

My survey sheets were filled out daily and I made sure to ask before my assistant and I left Accurate NDE for a job if he had his monitoring equipment, that being his film badge, dosimeter, and alarm rate meter and if they were all calibrated.
