---

Mr. Gallagher-

The purpose of this email is to advise you that, we will be adding the following license conditions to the final Safety Evaluation Report (SER) for the Oyster Creek Nuclear Generating Station. (OCGS). OCGS has previously committed to these items during the 539th. meeting of the Advisory Committee on Reactor Safeguards (ACRS) and in letters to the Nuclear Regulatory Commission (NRC). The three previous conditions remain unchanged from the updated SER of December 2005.

The following is a summary of the proposed license conditions as they will appear in section 1.7 of the SER, the actual wording may differ slightly in the Operating License to put it into licensing format:

"The fourth license condition requires the applicant to perform full scope inspections of the drywell sand bed region every other refueling outage.

The fifth license condition requires the applicant to monitor drywell trenches every refueling outage to identify and eliminate the sources of water and receive NRC approval prior to restoring the trenches to their original design configuration.

The sixth license condition requires the applicant to perform an engineering study prior to the period of extended operation to identify options to eliminate or reduce the leakage in the OCGS refueling cavity liner.

The seventh license condition requires the applicant to perform a 3-D (dimensional) finite-element analysis of the drywell shell prior to entering the period of extended operation. "

Please advise me at your earliest convenience of your acceptance of the conditions or a request for additional discussions.

=====  
regards,

Donnie Ashley
