ORGANIZATION Holtec International				
SUBJECT License Amendment Request - HI-STORM 100 Amendment Request Outstanding items				
SUMMARY (Continue on Page 2)				
NRC Attendees: Christopher Regan				
NRC called Holtec International to inform them of four followup items the staff had identified that require Holtec revision to the above ground license amendment application (LAR 1014-3). The staff does not consider these significant issues and more clean-up items in nature. The following items were communicated to Holtec.				
1) FSAR Table 5.3.2 contains reference to soil properties that should be deleted.				
2) The staff considers the definition of VVM, contained in the application to be unnecessary for approval of the requested amendment. As such the definition should be deleted.				
3) FSAR Section 2.9, containing language regarding Zr alloy fuel cladding, should be revised to be consistent with language contained in the Certificate of Compliance and Technical Specifications.				
4) FSAR Table 2.1, regarding reference to RCCAs and CEAS, should be revised to be consistent with language contained in the Certificate of Compliance and Technical Specifications.				
Holtec agreed to consider making the changes but did not foresee any reason why they could not be made.				
Additionally, the staff asked Holtec about the status of the remaining thermal analysis Holtec had committed to perform and provide to the staff as discussed in a conference call on March 7, 2007. Holtec indicated the analysis would be completed by 4/27 and provided to the staff by 4/30. Holtec and the staff agreed that the revised pages to address the above 4 items would also be provided by 4/30 in the same correspondence.
