---

Thanks John/Jim,

Sorry I was not able to make yesterdays conf call. I was at a Core Team meeting in Buffalo helping to resolve technical issues for the West Valley EIS.

Alex gave me a verbal summary of yesterdays call. I will contact Paul Kutzy from WC DOH and see what I can do to make the situation clearer for the County. I would call Tony directly but he does not answer messages, so I have had better luck working through their DOH to get info to the County.

Also, I am going to check my conf call notes. I seem to recall that the issue with Entergy not contacting you or us re: the first fish sampling effort was discussed w/stakeholders, but I'm not sure. Will let you know if I find that was the case.

Tim

 Our fish results are as follows:

	Perch	Catfish	MDA
Sr-90	0.01±0.01	0.01±0.01	0.02
Cs-137	0.00±0.00	0.00±0.00	0.02
Co-60	0.00±0.00	0.01±0.01	0.02

All results are in units of pCi/g. Note that the uncertainties for the Cs-137 results and the perch Co-60 result are reported as 0.00. This is an error, I will contact ORISE for the correct uncertainty. The results, however, are correct. There is no detectable radioactivity in the samples. The samples are from the vicinity of Indian Pt.
