---

Hello All,

We held a conf call between DEC and DOH yesterday. The goal was to begin to bring together knowledge regarding fish species and habits, sampling activities along the river, etc. available from State resources as preparation for a general conf call with Entergy and NRC.

DOH is compiling the related State historical data on Sr-90 in fish. It may take a few days as much of the data is in boxes in their storage area and most of it is hardcopy that has to be hand entered to compile it. Can a similar compilation of data be generated and shared for plant REMP fish data (from PASNY, Con Ed, and Entergy programs) , including if available any pre-operational fish analysis?

I had a discussion John White yesterday. We discussed the purpose and limitations of the NRC's REMP sampling requirements and how our agencies can best coordinate planning for our involvement in the Spring REMP split sampling with Entergy. I believe the NRC is also investigating what type of information is available in the literature on Sr-90 concentrations in fish.

I spoke with Entergy yesterday and they will be providing copies of their env sampling protocols and the studies used to determine the current fish control sample location.

I would like to suggest that we share the information we are currently compiling as soon as possible so we can conclude this coordinated planning process in a timely manner.

In the meantime, does anyone have a need to hold a conf call in the near future, before we have compiled and shared the info we are all working to bring to the table?

Thank you,

Tim Rice
