Oyster Creek Generating Station
Facility Operating License No. DPR-16
NRC Docket No. 50-219

Subject: Additional Information – License Amendment Request No. 315, “Application of Alternative Source Term” (TAC No. MC6519)

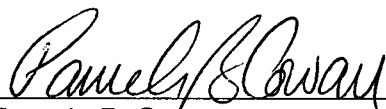

References: (1) AmerGen letter to USNRC, “Additional Information - License Amendment Request No. 315 - Application of Alternative Source Term,” (TAC No. MC6519), dated March 23, 2007

Reference 1 provided the radiological dose analysis calculation supporting the Oyster Creek Generating Station License Amendment Request No. 315, “Application of Alternative Source Term (TAC No. MC6519).” Reference 1 provided proprietary and non-proprietary versions of the calculation along with the required request for public withholding under 10 CFR 2.390 and the required affidavit certifying the basis for withholding. The non-proprietary version submitted in Reference 1 redacted some information that upon further consideration need not be withheld. Accordingly, the previously submitted non-proprietary version of Calculation No. PSAT 05201H.08, Revision 3, “Dose Assessment for Oyster Creek Control Room Habitability” is to be replaced with the non-proprietary version provided in Enclosure 1. No changes to the calculation have been made.

No new regulatory commitments are established by this submittal. If any additional information is needed, please contact David J. Distel at (610) 765-5517.

I declare under penalty of perjury that the foregoing is true and correct. Executed on the 4th day of May, 2007.

Respectfully,

DBH
