

## STATUS OF GUIDANCE FOR IMPLEMENTATION OF 10 CFR 20.1406

1. Draft Regulatory Guide 4012, "Minimization of Contamination..." is under internal concurrence review:
  - A. Licensing offices - NRO, NRR, FSME, NMSS
  - B. OGC
  - C. Identification as Division 4 is because of broad applicability
  - D. May 21 requested but we are prepared to extend this to June 4
2. The content closely parallels the material presented in Tucson and more recently at NEI headquarters
  - A. At the NEI meeting, 33 recommendations with respect to groundwater contamination were provided by NEI.
  - B. 10 of these 33 were sufficiently distinct from the material already included in the guide that their content or intent has been included in the guide. (May or may not be recognizable).
  - C. Staff felt that the other 23 were already covered in some form.
3. ACNW is planning to review during its June meeting (19-21). ACRS may also be involved.
4. A request for a waiver of CRGR review is being prepared since the current rule and guidance only apply to new facilities and no backfit issues is anticipated.
5. We have focused on new reactors but much of the content is generally applicable and is intended for use for all new facilities.
6. We are still on schedule to issue the draft guide for public comment in July, 2007. There will be a 60-90 day comment period.
