Subject: UniStar Nuclear, Project Nos. 733 (AREVA NP), 746 (UniStar Nuclear),  
750 (AmerenUE), and 752 (Amarillo Power)  
Response to Regulatory Issue Summary 2007-08  
Updated Licensing Submittal Information to Support the Design-Centered  
Licensing Review Approach

References: 1) NRC Regulatory Issue Summary 2007-08, Updated Licensing Submittal  
Information to Support the Design-Centered Licensing Review Approach,  
dated April 16, 2007  
2) Letter UN#06-006, from R. M. Krich (UniStar Nuclear) to U.S. NRC, "UniStar  
Nuclear, NRC Project No. 746, Response to NRC Regulatory Issue Summary  
2006-006, New Reactor Standardization Needed to Support the Design-  
Centered Licensing Review Approach," dated July 13, 2006

In Regulatory Issue Summary (RIS) 2007-08 (Reference 1), the NRC stated that it is seeking to obtain updated information from that provided in response to RIS 2006-06, "New Reactor Standardization Needed to Support the Design-Centered Licensing Review Approach," (Reference 2) regarding standardization and the schedules for submitting Early Site Permit (ESP), Combined License (i.e., COL), or standard Design Certification (DC) applications. The NRC also requested updated information related to quality assurance activities and construction plans. The response to this RIS is voluntary and the NRC requested that it be submitted within 45 days of the date of the RIS, i.e., by May 31, 2007.

This reply to RIS 2007-08 by UniStar Nuclear is the combined response for the US EPR Design-Centered Working Group (DCWG). The DCWG currently includes Constellation Generation Group, AmerenUE, Amarillo Power, and AREVA NP. As previously indicated in our response to RIS 2006-06 (Reference 2), UniStar Nuclear continues to support and endorse the design-centered review approach proposed by the NRC. To the extent the information is known, Enclosure 1 provides the responses to the bulleted items in the RIS. Specifically, Enclosure 1 addresses the information requested in three areas: Licensing Submittal Information, Site and Environmental Information, and Plant Construction Requirements Information. Enclosure 2 provides the latest revision of the proposed US EPR COL Application Standardization Matrix showing the COL sections/subsections that will be relying on the US EPR DC application, those

D017  
D079

UN#07-005  
Page 2

COL sections/subsections that will be standardized (i.e., generic) and therefore repeated verbatim in subsequent COL applications, and those COL sections/subsections that are likely to be site-specific.

If you have any questions, please contact me at (410) 864-6441.

Respectfully,

A handwritten signature in black ink, appearing to read 'R. M. Krich', written in a cursive style.

R. M. Krich  
UniStar Nuclear Development, LLC

Enclosures:     1) Enclosure 1: Response to NRC Regulatory Issue Summary 2007-08  
                     2) Enclosure 2: Proposed US EPR Combined License (i.e., COL) Application  
   Standardization Matrix

       NRC Project Manager, US EPR Design Certification Application

ENCLOSURE 1

Response to NRC Regulatory Issue Summary 2007-08

Enclosure 1  
Response to NRC Regulatory Issue Summary 2007-08

Each of the information requests in NRC Regulatory Issue Summary (RIS) 2007-08, are addressed below. UniStar Nuclear is providing a combined response for the members of the US EPR Design-Centered Working Group (DCWG). The DCWG includes Constellation Generation Group (NRC Project No. 746), AmerenUE (NRC Project No. 750), Amarillo Power (NRC Project No. 752), an as yet unspecified Constellation site, and AREVA NP (NRC Project No. 733). UniStar Nuclear is in the process of developing the first (i.e., reference) Combined License (i.e., COL) application for a possible unit at the Calvert Cliffs Nuclear Power Plant (CCNPP) site (Reference 1) that will reference the AREVA NP US EPR standard design. UniStar Nuclear's response to this RIS provides updated information from that which was provided in our response to RIS 2006-06, "New Reactor Standardization Needed to Support the Design-Centered Licensing Review Approach," dated May 31, 2006 (Reference 2) with respect to standardization and the schedules for submitting the US EPR Design Certification (DC) and COL applications as well as quality assurance activities and construction plans.

Licensing Submittal Information:

- Will the applicants be organized into the US EPR DCWGs? If so, what is the membership and who is the single point of contact designated for each DCWG? Have protocols been developed to provide coordinated responses for RAIs with generic applicability to a design center?

Response:

The applicants are organized into a DCWG. The membership includes: AREVA NP, AmerenUE, Amarillo Power, and Constellation Generation Group. As previously provided in our response to RIS 2006-06, the single point of contact for the US EPR DCWG is as follows:

R. M. Krich, Senior Vice President, Regulatory Affairs  
UniStar Nuclear  
750 East Pratt Street, 14th Floor\*  
Baltimore, MD 21202  
(410) 864-6441\*

\* Note - new phone and location

A protocol has been developed in that an established procedure governing written communications with the NRC is being implemented for written communications concerning COL applications. Also, UniStar and AREVA will coordinate the responses to NRC Requests for Additional Information (RAIs) regarding DC or COL applications. In that way, coordinated responses for RAIs with generic applicability to our DCWG will be provided. The specific UniStar Nuclear procedure is LS-AN-102, *UniStar Nuclear Written Communications*.

Enclosure 1  
Response to NRC Regulatory Issue Summary 2007-08

- Which applicant referencing the design will be designated as the R-COL applicant?

Response:

UniStar Nuclear Development (UND), L.L.C. and Constellation Generation Group will be the applicants for the Reference (R)-COL based on an EPR located at the Calvert Cliffs site.

- When (month and year) will each of the COL applications be submitted for review? In addition, what is the design, site location, and the number of units at each site?

Response:

Applicant	Site	Design	COL Submitted - Month/Year	Number of Units
UND/Constellation Generation Group	CCNPP	US EPR	March/ 2008* (Early submittal of ER June/07 (Reference 3))	1
UND/AmerenUE	TBD	US EPR	Third Quarter 2008 (Reference 4)	1
UND/Amarillo Power	TBD	US EPR	Fourth Quarter 2008 (Reference 5)	2
UND/Constellation Generation Group	Undesignated	US EPR	Fourth Quarter 2008	1

\* UniStar Nuclear is working to improve this submittal date to end of 2007

- What portions of the COL application (chapters, sections, subsections) will be relying on the DC?
- What portions of the R-COL application (chapters, sections, subsections) will be referenced (i.e., replicated verbatim) in S-COL applications, and what portions of the application are likely to be site-specific?

Response:

The latest revision of the proposed US EPR COL Application Standardization Matrix which details the portions of the COL application (on a section and subsection basis) is provided in Enclosure 2. An "X" in the column with the heading "DCD Pointer" means that section or subsection will be relying on the DC application. A "G" in the column with the heading "Generic (G)/Site-Specific (S)" means the section or subsection will be replicated verbatim in Subsequent(S)-COL applications. A "G/S" in the same column means that part of a section or subsection will be replicated

Enclosure 1  
Response to NRC Regulatory Issue Summary 2007-08

verbatim in the S-COL applications. An "S" or a "G/S" in the same column means that all or part of a section or subsection will be site-specific, respectively.

- When (month and year) will applicants complete the detailed design information to be verified under those inspections, tests, analyses, and acceptance criteria that are directed at certification information (design acceptance criteria)? Will this information be completed in a design certification amendment application, in the R-COL application, in S-COL applications, in post-COL Final Safety Analysis Report updates, or a combination thereof?

Response:

AREVA NP provided information regarding the design process and design timeline for the US EPR in Reference 6. The NRC responded in Reference 7, noting that the "... proposal can promote a higher degree of standardization for the US EPR for these subject areas by reducing reliance on design acceptance criteria in the design certification rulemaking. Your proposal appears to be consistent with the design-centered review approach described in Regulatory Issue Summary 2006-06, 'New Reactor Standardization Needed to Support the Design-Centered Review Approach.'" AREVA NP is proceeding as outlined in Reference 6.

The goal of the approach outlined in Reference 6 is to close as many of the Design Acceptance Criteria (DAC) items as possible during the NRC review of the design certification application, based on the results of detailed engineering. The areas in which this approach would be applied include detailed piping design and analysis, Instrumentation and Controls (I&C), and Human Factors Engineering (HFE).

AREVA NP proposes to close DAC items during the NRC review of the DC application, through submittal of updates to the DC application to remove DAC items from Tier 1 Inspections, Tests, Analyses, and Acceptance Criteria (ITAAC) and to add the appropriate design information to Tier 1 and Tier 2 of the Design Control Document (DCD). The completion of DAC items during the DC application review would be supported with submittal of topical reports and/or on-site reviews, with the particular completion mechanism to be determined on a case-by-case basis. AREVA NP understands that the details of this approach are subject to further discussion and agreement with the NRC. AREVA NP intends to submit a letter to the NRC, upon submittal of the DC application, outlining in more detail the schedule for availability of detailed design information to support DAC closure.

Completion of DAC items remaining after the US EPR DC rulemaking could be accomplished with a DC amendment. However, it is expected that the scope of remaining DAC will be small, if any, and thus the mechanism or process for completion will be selected at a later date.

Enclosure 1  
Response to NRC Regulatory Issue Summary 2007-08

Site and Environmental Information

- Do any applicants intend to apply for an ESP prior to submitting their COL applications? If so, when (month and year) would the proposed ESP be submitted to the NRC for review?

Response:

None of the applicants intend to apply for an ESP prior to submitting their COL applications.

- For ESP applicants, is the applicant going to be seeking approval of either "proposed major features of the emergency plans" per 10 CFR 52.17(b)(2)(i), or "proposed complete and integrated emergency plans" per 10 CFR 52.17(b)(2)(ii)?

Response:

Not applicable.

- Do the applicants plan to submit an Environmental Report (ER) or Limited Work Authorization (LWA) request prior to other portions of the COL application, and if so, when (month and year)?

Response:

As previously summarized in our February 16, 2007 letter (Reference 8), UniStar Nuclear is currently planning on the following for the R-COL: 1) Submittal of a request for an LWA as it is defined by the recently approved rule change (i.e., referred to as LWA-2 in our previous letters referenced in our February 16, 2007 letter) in December, 2007, ahead of the submittal of the COL application in March, 2008, and 2) early submittal of the ER by the end of June, 2007. At this time it is expected that the remaining DCWG applications will submit a complete COL application that will include the ER. A decision on whether to submit LWA requests has not been made at this time.

- What scope and schedule do applicants project for site characterization activities, such as core borings and testing of core samples?

Applicant	Site	Site Characterization Scope	Completion Schedule	Laboratory Testing	Completion Schedule
UND/Constellation Generation Group (Reference 9)	CCNPP	1) Standard penetration testing (i.e., borings)	1) Complete	1) Moisture content (ASTM D 2216)	1) Complete
		2) Observation wells	2) Complete	2) Unit weigh	2) Complete
		3) Test pits and	3) Complete	3) Specific gravity (ASTM D 854)	3) Complete
				4) Sieve and hydrometer	4) Complete

Enclosure 1  
Response to NRC Regulatory Issue Summary 2007-08

		bulk sampling 4) Cone penetrometer tests 5) Electrical resistivity 6) Downhole geophysics testing 7) Split spoon (disturbed sampling) 8) Shelby tubes (undisturbed sampling) 9) Suspension P-S velocity logging	4) Complete 5) Complete 6) Complete 7) Complete 8) Complete 9) Complete	analysis (ASTM D 422 and ASTM D 6913) 5) Atterberg limits (ASTM D 4318) 6) Chemical analysis (pH, chloride, sulfate) 7) Moisture – density (ASTM D 1557) 8) Unconfined compression (ASTM D 2166) 9) Unconsolidated – undrained triaxial compression (ASTM D 2850) 10) Consolidated – undrained compression (ASTM D 4767) 11) Direct shear (ASTM D 3080) 12) Resonant column torsional shear (RCTS) 13) Consolidation test (ASTM D 2435) 14) K <sub>d</sub> testing	5) Complete 6) Complete 7) Complete 8) Complete 9) Complete 10) Complete 11) Complete 12) June 2007 (initial samples) 13) Complete 14) June 2007
UND/AmerenUE (Reference 10)	Callaway*	1) Standard penetration testing (i.e., core borings) 2) Observation wells 3) Suspension P-S velocity logging 4) Downhill pressure meter 5) Cross-hole sonic logging 6) Surface reflection survey	1) Complete 2) June 2007 3) Complete 4) Complete 5) Complete 6) Complete	Same as for the CCNPP site	All testing, including RCTS and K <sub>d</sub> testing will be completed in August 2007
UND/Amarillo Power	To be determined (TBD)	TBD	TBD	TBD	TBD
UND/Constellation Generation Group	Nine Mile Point*	Same as for CCNPP plus core borings	July-August 2007	Same as for CCNPP without RCTS	July-August 2007

\* A final site for the COL application has not yet been determined.

Enclosure 1  
Response to NRC Regulatory Issue Summary 2007-08

- What interactions have taken place with local and State authorities and other Federal agencies to support licensing new reactors?

Response:

**For the CCNPP site:** UniStar Nuclear has had a number of meetings with the Maryland Power Plant Research Project (PPRP) staffed by the Maryland Department of Natural Resources. The PPRP is responsible for assessing UniStar Nuclear's application to the Maryland Public Service Commission for a Certificate of Public Convenience and Necessity (CPCN). UniStar Nuclear has also had interactions with the Maryland Department of the Environment, the Maryland Department of Transportation, the Maryland Port Authority Safety Department, Maryland Historical Trust, Calvert County Commissioners, Calvert County Dept. of Economic Development, Calvert County Planning and Zoning, U.S. Coast Guard, and Patuxent River Naval Air Station.

**For AmerenUE:** AmerenUE and its sub-contractors have held working level meetings or had contact with the State Historical Preservation Office and others within the Missouri Department of Natural Resources, the Army Corps of Engineers, the Missouri Department of Conservation, and the Federal Aviation Administration. More formal meetings between AmerenUE and the Missouri Department of Natural Resources are expected to take place in the next 2 to 4 weeks.

**For Amarillo Power:** Following site selection, initial interactions with state and local agencies will be conducted.

**For the Nine Mile Point site:** Initial interaction with the Army Corps of Engineers on wetland permitting for site characterization activities was held on May 24, 2007.

Plant Construction Requirements Information

- Who are the vendors and consultants that are assisting in the preparation of the application? The NRC requests that the potential applicants submit a list of entities that are providing input to and are preparing the COL application under a QA program.

Response:

The US EPR R-COL application being prepared by UniStar Nuclear has support from its primary consultants and advisors: Bechtel, AREVA NP, and Tetra Tech NUS. The activity of writing the COL application itself which is being carried out by UniStar Nuclear employees and consultants from Excel Services is not within the scope of the Quality Assurance (QA) program. Certain information that is input to the COL application is prepared in accordance with a QA program when required.

Enclosure 1  
Response to NRC Regulatory Issue Summary 2007-08

The US EPR S-COLA for AmerenUE is also being prepared by UniStar Nuclear in conjunction with AmerenUE and its primary consultant and advisor: Paul C. Rizzo Associates.

The US EPR S-COLA for Amarillo Power is also being prepared by UniStar Nuclear in conjunction with Amarillo Power and its primary consultants and advisors: CH2M HILL and Bechtel.

- What information do the applicants have regarding the timing of construction, the ordering of long lead time components, and other commitments to construction? Furthermore, what vendors will be designing, manufacturing, fabricating, and testing safety-related components for eventual plant construction?

Response:

**For the CCNPP site:** Temporary construction-related activities (clearing, grading, construction of temporary roads, warehouses, utilities, concrete mixing plants, construction support buildings) and excavation for permanent facility structures could begin at the CCNPP site as early as December 2009. Construction of permanent systems, structures, and components (SSCs) which have no reasonable nexus to radiological health and safety or common defense and security could start as early as January 2010. LWA activities for SSCs that have a nexus to radiological health and safety or common defense and security could start as early as January 2011, if an LWA is requested. Safety related construction governed by the issuance of a COL is planned to begin in July 2011.

UniStar Nuclear has secured the following long-lead items:

Reactor Pressure Vessel (RPV): Integrated Nozzle Belt – Japan Steel Works (JSW)  
Transition Ring – JSW  
Core Shells – JSW  
Head Flange – JSW

Steam Generators (SGs) (4): Conical Shells – JSW  
Tubesheets – JSW  
Primary Heads – JSW

UniStar Nuclear has reserved the remaining long-lead items, such as RPV nozzles and heads and SG elliptical heads and shells, from JSW or AREVA's Chalon facility. Machining of these long-lead items can be performed at Chalon or at the BWX Technologies (BWXT) facility. UniStar Nuclear is also currently in discussions with turbine-generator suppliers.

**For AmerenUE:** Temporary construction-related activities (clearing, grading, construction of temporary roads, warehouses, utilities, concrete mixing plants,

Enclosure 1  
Response to NRC Regulatory Issue Summary 2007-08

construction support buildings) and excavation for permanent facility structures could begin by the first quarter of 2011. Construction of permanent systems, structures, and components (SSCs) both safety and non-safety related could start as early as first quarter 2012, provided that the COL is granted by fourth quarter 2011.

The long-lead forging manufacturing contract for the major heavy components has been agreed, with scheduled delivery dates in late 2010 and early 2011.

**For Amarillo Power:** Temporary construction related activities (clearing, grading, construction of temporary roads, warehouses, utilities, concrete mixing plants, construction support buildings) and excavation for permanent facility structures could begin for the first unit at the Amarillo site as early as September 2010. Construction of permanent systems, structures, and components (SSCs) which have no reasonable nexus to radiological health and safety or common defense and security could start as early as October 2010. LWA activities for SSCs that have a nexus to radiological health and safety or common defense and security could start as early as March 2012, if an LWA is requested. Safety-related construction governed by the issuance of a COL is targeted to begin in September 2012.

Amarillo Power has commenced preliminary negotiations, and will consider issuing a purchase order to a vendor in 2007 for long lead materials such as heavy forgings, to support the construction schedule.

**For the undesignated Constellation site:** Temporary construction related activities (clearing, grading, construction of temporary roads, warehouses, utilities, concrete mixing plants, construction support buildings) and excavation for permanent facility structures could begin as early as September 2012. Construction of permanent systems, structures, and components (SSCs) which have no reasonable nexus to radiological health and safety or common defense and security could start as early as October 2012. LWA activities for SSCs that have a nexus to radiological health and safety or common defense and security could start as early as March 2014, if an LWA is requested. Safety-related construction governed by the issuance of a COL is targeted to begin in September 2014.

AREVA NP is the vendor responsible for the designing, manufacturing, fabricating, and testing of the Nuclear Steam Supply System (NSSS) safety-related components for eventual plant construction. The remaining safety related SSCs will be under the control of AREVA but will contain some subcontracted work relative to design, fabrication and testing.
