Subject: Tracer Interim Test Hydrology Teleconference

To all:

I have set up a telephone conference for March 21st from 1-3 pm to allow GZA to provide us with the initial tracer test results. We would also like to agree on an "open items" list of site characterization discrepancies that remain to be explained. We will do our best to get some agreement on how to characterize these open items that will be documented in our next inspection report. These open items are expected to be resolved in future inspection reports to enable the NRC to be satisfied with Entergy's progress with this issue. For the meeting, we are interested in the Ozark Underground Lab test results and plume cross section maps to review, if possible, prior to our March 21st discussions. Please provide these materials if available, to me and I will make distribution. The call number is: 1-800-638-8081; passcode: (b)(2)Low Please confirm your ability to attend the subject meeting. Thanks.

Regards,

Jim
