Contact name info –

Holtec LAR (LAR5) Docket #1014. This amendment to the Holtec cask design is to allow for the shorter height U1 casks. The NRC person on this is Chris Reagan.

The Indian Point LAR is Docket # 50-3 and relates to the Unit 1 fuel building crane. This LAR can not be approved by NRC until the Holtec LAR is approved. Ted Smith is the NRC person on this.

Ted asked us to cite the ground water issue as an item for NRC too consider as part of NRC's process to prioritize their workload. I do not know if Chris Reagan is aware of the relationship of the Holtec LAR and the IP ground water issue relative to U1 fuel removal.
