Subject: Include Emergency Planning in Relicensing

Dear Chairman Dale Klein,

I live in proximity to the Indian Point nuclear power plant. Living near this aging nuclear facility, I am deeply concerned about the potential for increased safety problems and environmental pollution, should the NRC relicense it for another 20 years. I am also deeply concerned about the inability to evacuate the region, in the event of an emergency at Indian Point.

In 2003 a New York State-commissioned report conducted by James Lee Witt Associates concluded that the emergency evacuation plans for Indian Point are "are not adequate to overcome their combined weight and protect the people from an unacceptable dose of radiation in the event of a release from Indian Point." The counties surrounding Indian Point and New York State have refused to submit their Annual Certification Letters since the Report was released, yet the Nuclear Regulatory Commission, Federal Emergency Management Agency, and Department of Homeland Security have each year certified the plans without ever providing the public or elected officials a detailed response to the large number of problems with the plans as detailed by James Lee Witt.

I am writing to formally request that the NRC, in the relicensing process for Indian Point, provide the public and elected officials with a comprehensive, detailed response to all of Witt's findings as called for in federal legislation proposed in the U.S. House (649) sponsored by Representatives Hall, Hinchey, Lowey, Engel, and Shays, and U.S. Senate (994) sponsored by Senators Clinton and Schumer. This legislation is also supported by New York Governor Eliot Spitzer.

Sincerely,
Nancy thomas

Dear Chairman Dale Klein,

I live in proximity to the Indian Point nuclear power plant. Living near this aging nuclear facility, I am deeply troubled by the potential for increased safety problems and environmental pollution, should the NRC relicense it for another 20 years. I am also concerned about the inability to evacuate the region, in the event of an emergency at Indian Point. There has yet to be a realistic evacuation plan that I've seen, should it be required. The plans always assume some trouble-free, orderly transition during an emergency that will only incite panic and terror.

In 2003 a New York State-commissioned report conducted by James Lee Witt Associates concluded that the emergency evacuation plans for Indian Point are "are not adequate to overcome their combined weight and protect the people from an unacceptable dose of radiation in the event of a release from Indian Point." The counties surrounding Indian Point and New York State have refused to submit their Annual Certification Letters since the Report was released, yet the Nuclear Regulatory Commission, Federal Emergency Management Agency, and Department of Homeland Security have each year certified the plans without ever providing the public or elected officials a detailed response to the large number of problems with the plans as detailed by James Lee Witt.

The counties surrounding Indian Point and New York State have refused to submit their Annual Certification Letters since the Report was released, yet the Nuclear Regulatory Commission, Federal Emergency Management Agency, and Department of Homeland Security have each year certified the plans without ever providing the public or elected officials a detailed response to the large number of problems with the plans as detailed by James Lee Witt.

I am writing to formally request that the NRC, in the relicensing process for Indian Point, provide the public and elected officials with a comprehensive, detailed response to all of Witt's findings as called for in federal legislation proposed in the U.S. House (649)sponsored by Representatives Hall, Hinchey, Lowey, Engel, and Shays, and U.S. Senate (994) sponsored by Senators Clinton and Schumer. This legislation is also supported by New York Governor Eliot Spitzer.

Sincerely,
Carol Dobson

Subject: Include Emergency Planning in Relicensing

Dear Chairman Dale Klein,

I live in proximity to the Indian Point nuclear power plant. Living near this aging nuclear facility, I read every weeks about failures of the alarm system, unexpected and unreported leaks, and fires. I know there is no way to evacuate this region-- we are trapped by mountains and the Hudson River, and have only a two lane highway to escape. I am also deeply concerned about the inability to evacuate the region, in the event of an emergency at Indian Point.

In 2003 a New York State-commissioned report conducted by James Lee Witt Associates concluded that the emergency evacuation plans for Indian Point are "are not adequate to overcome their combined weight and protect the people from an unacceptable dose of radiation in the event of a release from Indian Point." The counties surrounding Indian Point and New York State have refused to submit their Annual Certification Letters since the Report was released! How could we allow this place to stay open?

I request that the NRC, in the relicensing process for Indian Point, provide the public and elected officials with a comprehensive, detailed response to all of Witt's findings as called for in federal legislation proposed in the U.S. House (649)sponsored by Representatives Hall, Hinchey, Lowey, Engel, and Shays, and U.S. Senate (994) sponsored by Senators Clinton and Schumer. This legislation is also supported by New York Governor Eliot Spitzer.

Sincerely,

In 2003 a New York State-commissioned report conducted by James Lee Witt Associates concluded that the emergency evacuation plans for Indian Point are "are not adequate to overcome their combined weight and protect the people from an unacceptable dose of radiation in the event of a release from Indian Point." The counties surrounding Indian Point and New York State have refused to submit their Annual Certification Letters since the Report was released, yet the Nuclear Regulatory Commission, Federal Emergency Management Agency, and Department of Homeland Security have each year certified the plans without ever providing the public or elected officials a detailed response to the large number of problems with the plans as detailed by James Lee Witt.

I am writing to formally request that the NRC, in the relicensing process for Indian Point, provide the public and elected officials with a comprehensive, detailed response to all of Witt's findings as called for in federal legislation proposed in the U.S. House (649) sponsored by Representatives Hall, Hinchey, Lowey, Engel, and Shays, and U.S. Senate (994) sponsored by Senators Clinton and Schumer. This legislation is also supported by New York Governor Eliot Spitzer.

Sincerely,
Kerri Brady

Dear Chairman Dale Klein,

I live in proximity to the Indian Point nuclear power plant. Living near this aging nuclear facility, I am deeply concerned about the potential for increased safety problems and environmental pollution, should the NRC relicense it for another 20 years. I am also deeply concerned about the inability to evacuate the region, in the event of an emergency at Indian Point.

In 2003 a New York State-commissioned report conducted by James Lee Witt Associates concluded that the emergency evacuation plans for Indian Point are "are not adequate to overcome their combined weight and protect the people from an unacceptable dose of radiation in the event of a release from Indian Point." In 2003 a New York State-commissioned report conducted by James Lee Witt Associates concluded that the emergency evacuation plans for Indian Point are "are not adequate to overcome their combined weight and protect the people from an unacceptable dose of radiation in the event of a release from Indian Point." The counties surrounding Indian Point and New York State have refused to submit their Annual Certification Letters since the Report was released, yet the Nuclear Regulatory Commission, Federal Emergency Management Agency, and Department of Homeland Security have each year certified the plans without ever providing the public or elected officials a detailed response to the large number of problems with the plans as detailed by James Lee Witt.

I am writing to formally request that the NRC, in the relicensing process for Indian Point, provide the public and elected officials with a comprehensive, detailed response to all of Witt's findings as called for in federal legislation proposed in the U.S. House (649) sponsored by Representatives Hall, Hinchey, Lowey, Engel, and Shays, and U.S. Senate (994) sponsored by Senators Clinton and Schumer. This legislation is also supported by New York Governor Eliot Spitzer.

Sincerely,
jean bonnes

Dear Chairman Dale Klein,

I live in proximity to the Indian Point nuclear power plant. Living near this aging nuclear facility, I am deeply concerned about the potential for increased safety problems and environmental pollution, should the NRC relicense it for another 20 years. I am also deeply concerned about the inability to evacuate the region, in the event of an emergency at Indian Point.

In 2003 a New York State-commissioned report conducted by James Lee Witt Associates concluded that the emergency evacuation plans for Indian Point are "are not adequate to overcome their combined weight and protect the people from an unacceptable dose of radiation in the event of a release from Indian Point." In 2003 a New York State-commissioned report conducted by James Lee Witt Associates concluded that the emergency evacuation plans for Indian Point are "are not adequate to overcome their combined weight and protect the people from an unacceptable dose of radiation in the event of a release from Indian Point." The counties surrounding Indian Point and New York State have refused to submit their Annual Certification Letters since the Report was released, yet the Nuclear Regulatory Commission, Federal Emergency Management Agency, and Department of Homeland Security have each year certified the plans without ever providing the public or elected officials a detailed response to the large number of problems with the plans as detailed by James Lee Witt.

I am writing to formally request that the NRC, in the relicensing process for Indian Point, provide the public and elected officials with a comprehensive, detailed response to all of Witt's findings as called for in federal legislation proposed in the U.S. House (649) sponsored by Representatives Hall, Hinchey, Lowey, Engel, and Shays, and U.S. Senate (994) sponsored by Senators Clinton and Schumer. This legislation is also supported by New York Governor Eliot Spitzer.

Sincerely,

Subject: Include Emergency Planning in Relicensing

Dear Chairman Dale Klein,

I live in proximity to the Indian Point nuclear power plant. Living near this aging nuclear facility, I am deeply concerned about the potential for increased safety problems and environmental pollution, should the NRC relicense it for another 20 years. I am also deeply concerned about the inability to evacuate the region, in the event of an emergency at Indian Point.

In 2003 a New York State-commissioned report conducted by James Lee Witt Associates concluded that the emergency evacuation plans for Indian Point are "are not adequate to overcome their combined weight and protect the people from an unacceptable dose of radiation in the event of a release from Indian Point." Rockville, MD 20852-2738

Subject: Include Emergency Planning in Relicensing

Dear Chairman Dale Klein,

I live within 20 miles of the Indian Point nuclear power plant and am concerned about many aspects of the plant -- notably its poor planning for safety issues (including emergency evacuation of the surrounding areas) and its poor record of environmental pollution. These problems will potentially become more serious if the NRC relicenses the plant for another 20 years.

In 2003 a New York State-commissioned report conducted by James Lee Witt Associates concluded that the emergency evacuation plans for Indian Point are "are not adequate to overcome their combined weight and protect the people from an unacceptable dose of radiation in the event of a release from Indian Point." This finding certainly cannot be ignored. The counties surrounding Indian Point and New York State have taken a position -- they have refused to submit their Annual Certification Letters since the Report was released, yet the Nuclear Regulatory Commission, Federal Emergency Management Agency, and Department of Homeland Security have each year certified the plans without ever providing the public or elected officials a detailed response to the large number of problems with the plans as detailed by James Lee Witt.

I urge that the NRC, in the relicensing process for Indian Point, provide the public and elected officials with a comprehensive, detailed response to all of Witt's findings as called for in federal legislation proposed in the U.S. House (649) sponsored by Representatives Hall, Hinchey, Lowey, Engel, and Shays, and U.S. Senate (994) sponsored by Senators Clinton and Schumer. This legislation is also supported by New York Governor Eliot Spitzer.

This is a matter of urgent importance. Please give it your serious attention.

Sincerely,
Elizabeth Bernard
