Subject: spill

Steve,

As discussed with you today during your visit and inspection PRI's last spill, a spill of injection fluid was reported at 8:30 A.M. today. The spill occurred at Wellfield 2, well 2-1 166, an injection well. The spill resulted from a broken flange at the wellhead. An estimated 900 gallons of injection fluids were released to the ground. The uranium concentrations of the fluids were 1.1 ppm. This spill did not enter nor threaten the waters of the State. Mr., Joe Hunter of WDEQ/WDQ will be notified of the spill. As a result of the recent spills, wellfields 2 and 3 have been shut-in and will remain off until all wells can be inspected and repaired as needed.

Regards,

John McCarthy
