Oscar:

If there is a problem with the readings from this monitor, explain it in the report.

Steve

Stephen Cohen: A feral horse again knocked down the post upon which the upwind RadTrak monitor was mounted. The post was found on the ground. This may cause the detector result to be elevated. This is the second time that this has happened. There have been no previous problems since 1990 with the mounting post and now it gets knocked down in two (2) sequential quarters. I believe that this is the work of a single animal. As a result, the post is now attached to a wooden frame/tower on the site. I doubt that the animal can knock down the tower. I wanted to inform you about this problem. Oscar Paulson Facility Supervisor
