Subject: Restart of IAEA equipment at UZOO

***** BWXT Proprietary *****

Gabriel Bernasconi successfully restarted the IAEA equipment July 4th. All equipment restarted without problems (b)(4)

(b)(4)

(b)(4)

It restarted just fine and all lights were green when we left. We were in the facility for four hours. Over half of this time was the file maintenance.

Ex 4

The plan for July 5th is for me to check the lights in the morning. If all lights are still green, Gabriel will not enter the facility but do some work in the ACF. Downblend will restart that night. On the morning of the 6th, he will go in and download some data and then check it at the ACF. If all looks good he will leave after that. I do not expect any problems though unless the shutdown issue recurs. If this happens again there should be no loss of data because the field cabinet computers record the data.

Will let you know how it works out.
