Test #1, Day-30 samples that were examined on December 21, 2004 (the termination date for T1), include filter papers obtained from (1) high-volume filtration extracted at the sample tap, (2) high-volume filtration performed outside of the loop under vacuum, (3) sacrificial fiberglass from the interior of a large blanket, and (4) white precipitate filtered from the T1D21 water sample. In addition to the standard SEM/EDS data, optical microscopy images were taken in both diffuse and plane-polarized light of the high-volume filtrate obtained under vacuum (items 1 and 2 above).

Optical microscopy was used to examine the Day-21 water samples using both plane-polarized and cross-polarized light. Different levels of information can be obtained in plane-polarized light (analyzer out of the optical path) or with crossed polarizers (analyzer inserted into the optical path). Observations in plane-polarized light reveal details of the optical relief of the specimen, which are manifest in the "visibility" of boundaries and which increase with the increase of the refractive index across these boundaries. Differences in the refractive indices of the mounting adhesive and the specimen determine the extent to which light is scattered as it emerges from the uneven specimen surface. Materials with high relief, which appear to stand out from the image, have refractive indices that are appreciably different from that of the sample mount.

Transcribed Laboratory Log

Optical microscope plane-polarized photographs

#1 Day-21 precipitation from "filtered" water sample

Frame	1	I.D.	PIC00001	× 10	scattered dry fragments
	2		PIC00002	× 10	desiccated fragments
	3		PIC00003	× 50	single fragment with contraction dome
	4		PIC00004	× 50	similar fragment at adjacent area
	5		PIC00005	× 10	general cracking pattern
	6		PIC00006	× 50	edge of previous area as in PIC00005 larger cracks in the interior and finer cracks near the edge

General Observations: Filters show no crystal diffraction pattern.
Samples may have been disturbed.

#2 High-volume #1 46-ml sample

Frame	7	I.D.	PIC00007	× 2	general desiccated fragments
	8		PIC00008	× 5	general desiccated fragments
	9		PIC00009	× 5	same field with cross polarized filters showing some evidence of crystal highlights
	10		PIC00010	× 5	same field with different exposure time
	11		PIC00011	× 10	similar contraction bubbles on desiccated fragments
	11b		PIC00012	× 50	zoom in on one of the contraction bubbles

#3 High-volume #2 1-l @ pressure

Frame	12	I.D.	PIC00013	× 5	general desiccated fragments
	13		PIC00014	× 10	same field as PIC00013 with higher resolution
	14		PIC00015	× 50	same field as PIC00013 and PIC00014, some structure but no clear evidence of crystals
	14a		PIC00016	× 50	cross polarized to see structure around edges of dry flakes
	14b		PIC00017	× 50	cross polarized to see structure around edges of dry flakes with different exposure from PIC00016
	15		PIC00018	× 5	anomalous dendrites with polarizers (not saved)
	16		PIC00019	× 2	anomalous dendrites with polarizers (not saved)

Day-30 SEM Samples

Sample I.D.	#1	T1D30 high-vol. 1, taken in line 46 ml over 2.5 hours
	#2	T1D30 high-vol. 2, taken in lab under pressure, ~1 l (not analyzed because of similarity with Sample #1 and time constraints of the laboratory session)
	#3	T1D30 sacrificial fiberglass from interior of the large blanket Sample from dark crusty perimeter of a lump
	#4	T1D30 sacrificial fiberglass from perimeter of a lump This sample is also taken from perimeter of a lump, and a 1-mm-diam "tiny" white crystal on the surface is included in the sample
	#5	T1D30 sacrificial fiber from interior of larger blanket, internal flock from the clump; very little color change compared with raw fiber
	#6	T1D30 control sample of fiber glass that has not been exposed to solution (data not saved)
	#7	T1D30 filtered precipitate sample from Day 30

Note: Samples all were prepared together and then submitted for sputtering with gold/palladium alloy ~20 nm (nominal thickness). These sample identification (I.D.) numbers serve as the first digit in four-character fields that define the series of images and spectra obtained for each sample type. For example, image #1006 refers to the sixth sequential image taken during this lab session, and it was taken from sample I.D. #1.

SEM Analysis (added coating to avoid charging; thickness of the coating approximately 25 nm)

Operator: Adrian Brearley

Figure C-35. Day-30, sample #1 SEM image (#1011) magnified 100 times on one area of the filtrate.

Figure C-36. Day-30, sample #1 SEM image (#1012) magnified 250 times on one area of the filtrate.

Figure C-37. Day-30, sample #1 SEM image (#1013) magnified 500 times on one area of the filtrate.

Figure C-38. Day-30, sample #1 counting spectrum (EDS 1-1013) for the filtrate on the carbon-film substrate, as shown in Figure C-37.

Figure C-39. Day-30, sample #1 counting spectrum (EDS 1-1013a) for the filtrate on the carbon-film substrate, as shown in Figure C-37.

Figure C-40. Day-30, sample #1 SEM image (#1014) magnified 500 times on the block filtrate on the carbon-film substrate.

Figure C-41. Day-30, sample #1 counting spectrum (EDS 1-1014) on the particle, as shown in Figure C-40.

Figure C-42. Day-30, sample #1 SEM image (#1015) magnified 2000 times, close-up of the fracture surface, as shown in Figure C-40.

Figure C-43. Day-30, sample #3 SEM image (#3001) magnified 50 times on the fiberglass with surface coating.

Figure C-44. Day-30, sample #3 SEM image (#3002) magnified 100 times on the fiberglass with surface coating.

Figure C-45. Day-30, sample #3 SEM image (#3003) magnified 250 times on the fiberglass with surface coating.

Figure C-46. Day-30, sample #3 counting spectrum (EDS #3003) of the fractured coating, as shown in Figure C-45.

Figure C-47. Day-30, sample #3 SEM image (#3004) magnified 500 times; close-up of the fractured surface.

Figure C-48. Day-30, sample #3 SEM image (#3005) magnified 100 times on the fiber with film.

Figure C-49. Day-30, sample #3 SEM image (#3006) magnified 250 times on the film across the fibers.

Figure C-50. Day-30, sample #3 SEM image (#3007) magnified 500 times on the film across the fibers.

Figure C-51. Day-30, sample #3 counting spectrum (EDS #3007a) for the film, as shown in Figure C-50.

Figure C-52. Day-30, sample #3 SEM image (#3008) of particles on the film, magnified 450 times.

Figure C-53. Day-30, sample #3 counting spectrum (EDS #3008a) for the particles on the film, as shown in Figure C-52.

Figure C-54. Day-30, sample #3 counting spectrum (EDS #3008b) for the fiber, as shown in Figure C-52.

Figure C-55. Day-30, sample #3 SEM image (#3009) magnified 100 times on a group of fibers.

Figure C-56. Day-30, sample #3 SEM image (#3010) magnified 250 times; close-up of the film.

Figure C-57. Day-30, sample #3 counting spectrum (EDS #3010a) of precipitate on the film.

Figure C-58. Day-30, sample #4 SEM image (#4001) of fiber cluster with film, magnified 40 times.

Figure C-59. Day-30, sample #4 SEM image (#4002) of fiber cluster with film, magnified 100 times.

Figure C-60. Day-30, sample #4 SEM image (#4003) of fiber cluster with film, magnified 250 times.

Figure C-61. Day-30, sample #4 SEM image (#4004) close-up of fiber with film, magnified 500 times.

Figure C-62. Day-30, sample #4 SEM image (#4005) of a cluster of fiber, magnified 50 times.

Figure C-63. Day-30, sample #4 SEM image (#4006) magnified 100 times on the cluster of fiber shown in Figure C-62.

Figure C-64. Day-30, sample #4 SEM image (#4007) magnified 200 times on the surface precipitates shown in Figure C-62.

Figure C-65. Day-30, sample #4 SEM image (#4008) magnified 350 times on the surface precipitates shown in Figure C-62.

Figure C-66. Day-30, sample #4 counting spectrum (EDS #4008a) for the fractured precipitates.

Figure C-67. Day-30, sample #4 counting spectrum (EDS #4008b) for the film between fibers.

Figure C-68. Day-30, sample #5 SEM image (#5001) magnified 40 times on the fiberglass.

Figure C-69. Day-30, sample #5 SEM image (#5002) magnified 100 times; close-up of the fiberglass.

Figure C-70. Day-30, sample #5 SEM image (#5003) magnified 100 times; close-up of fibers.

Figure C-71. Day-30, sample #5 SEM image (#5004) magnified 250 times on the fibers with precipitate on surface. Streaks show evidence of charge accumulation on the sample.

Figure C-72. Day-30, sample #5 counting spectrum (EDS #5004a) for an exposed fiber with precipitate appearing in Figure C-71.

Figure C-73. Day-30, sample #7 SEM image (#7001), magnified 40 times; close-up of precipitate layer.

Figure C-74. Day 30, sample #7 SEM image (#7002), magnified 100 times; close-up of precipitate layer.

Figure C-75. Day-30, sample #7 SEM image (#7003) magnified 250 times; close-up of precipitate layer.

Figure C-76. Day 30, sample #7 SEM image (#7004) magnified 500 times on the crust on fiberglass; close-up of precipitate layer.
