Temporary Job Site _____

PROGRAM SCOPE

The licensee manufactures smoke detection devices and receives the radioactive sealed sources ready for use. Annual training is provided to those individuals who handle the sources and finished product which is provided by a consultant. Initial training is provided by the radiation Safety Officer prior to the individual's starting their work with radioactive materials. The licensee's records indicated that a couple hundred detectors are sold each month. The licensee's 5-year report for the period of January 2001 - December 2006 was issued on February 15, 2007. It was determined during the inspection that the report did not take into account a new model of detector authorized on the license, i.e., CPD7054 and CPD7054D. The licensee committed to sending a revised five-year report to headquarters. This is a minor violation since there is no safety significance and it is administrative in nature dealing with an incomplete record enumerating devices distributed.
