## **Generic Instructions**

1. Standards and cues for valve operation:
  - a. MOVs:
    - 1) "Turn the valve's handswitch on (panel #)(section#, as applicable) in the (clockwise or counter-clockwise) direction and observe that the valve's red light is (energized or de-energized) and its green light is (energized or de-energized)".
  - b. Manual valves
    - 1) "Turn the valve's handwheel (or other manual operating device) in the (clockwise or counter-clockwise) direction until resistance is felt."
2. The Evaluator should indicate simulated analog gauge readings by pointing a pen or equivalent to the intended place on the gauge.
3. Other methods of simulating control, operation and data collection is at the discretion of the Evaluator.
4. It is expected that the candidate shall locate controlled copies of any required procedures and describe how copies of these procedures would be prepared for use in the field. Only at this time should the evaluator give the candidate previously prepared copies of the procedure(s). This entire procedure need only be performed or simulated once during the entire exam. These activities are not required for JPMs conducted in the Simulator.
5. Consideration of electrical safety must be made during the performance of certain tasks involving electrical circuits and circuit breakers. The performer should be aware that working on or near energized equipment requires, at a minimum, wearing 100% cotton clothing and low voltage (Class 0) gloves while removing or securing shock hazards such as chains, jewelry, watches and metal-framed eyeglasses. Operating or racking circuit breakers may require additional PPE. Details can be found in Att. 2 of the Electrical Safety Rulebook and General Operating procedure 04-S-04-2 (Operation of Electrical Circuit Breakers)
6. Obtain Shift Management's permission before opening any control panel or compartment. Avoid placing any tools, flashlights, pointing devices or any part of your body inside the panel or compartment in a manner that could disturb the operation of any component within or potentially result in an electric shock).
7. Use of lasers as a pointing tool requires Engineering's prior approval of the specific tool for safe use in the Control area. (specifically, the laser's emissions must be verified as not interfering with any component's intended operation or function).
8. During activities within the CAA, consideration must be given to area dose rates. When in a posted Radiation Area, check your EAD for dose rates and minimize time spent in the area. Entry into High Radiation Areas or Contamination Areas is prohibited.

**Under no circumstances is any candidate  
allowed to operate any equipment outside the simulator  
without the permission of the Evaluator and Shift Management.**

## **C71 Task 1:     RPS Motor/Generator Startup**

<u>Setting:</u>	Plant (Outside CAA)
<u>Type:</u>	NLO
<u>Task:</u>	NOB-C71-002; NOB-C71-003; NOB-C71-005; CRO-C71-004
<u>K&amp;A:</u>	212000 A2.01: 3.7/3.9; A1.01: 2.8/2.9; A1.03: 2.4/2.5; G2.1.30: 3.9/3.4
<u>Safety Function:</u>	Instrumentation (7)
<u>Time Required:</u>	18 minutes
<u>Time Critical:</u>	No
<u>Faulted:</u>	No
<u>Performance:</u>	Simulate
<u>Reference(s):</u>	04-1-01-C71-1
<u>Handout(s):</u>	04-1-01-C71-1
<u># Manipulations:</u>	4
<u># Critical Steps:</u>	4
<u>Group #:</u>	1

### Simulator Setup/Required Plant Conditions:

- Area is accessible

### Safety Concerns:

- Do NOT operate plant equipment.
- Extreme caution should be taken around the RPS Motor Generator Set to prevent accidental contact with the controls.
- Use care when working around or near rotating equipment.
- Adjust which RPS Room to go to based on plant Protected Train.

### Initial Condition(s):

- The plant is operating at 100% power.
- Repairs have been completed on RPS A(B) Motor/Generator.
- 04-1-01-N32-1 Manual Valve Lineup Checksheet has been completed for C71-PT-N005A – D and C71-PT-N006A - H
- 04-1-01-C71-1 Handswitch Lineup Checksheet, Attachment V, has been completed, as required.
- 04-1-01-C71-1 Electrical Lineup Checksheet, Attachment III, has been completed, as required.
- RPS A(B) Bus is being supplied by the Alternate Feed.

### Initiating Cue(s):

- You have been directed to perform section 4.1 of the SOI to startup the RPS A(B) Motor/Generator.

## **C71 Task 1:     RPS Motor/Generator Startup**

### **Notes:**

1. JPM may be performed on either RPS A or B Motor/Generator, depending on plant conditions.
2. Att. 1, on page 10, is a drawing of a typical EPA.

### **Task Overview:**

This task is to perform a startup of the RPS Motor Generator and align the RPS Bus to the Normal Supply per the SOI. This task is performed to return RPS power to the Normal Supply.

### **Task Justification**

The following JPM does not meet the minimum requirements of 14-S-02-18. It either does not have the required number of manipulations or critical steps. However it has been deemed a valid JPM in accordance with 14-S-02-18 step 6.3.13 due to the following:

The task has high importance, significant consequences if improperly performed and/or complexity in controlling important plant parameters such as reactivity or reactor water level during transient conditions.

AND

This is a trip critical evolution performed by the non-licensed operators.

Due to a possible loss of offsite power the operator would be required to energize the RPS system to restore to ability to insert control rods. This task requires the operator to restart the RPS electrical system.

---

## **C71 Task 1:     RPS Motor/Generator Startup**

**Tasks : Critical tasks are underlined, italicized, and denoted by an (\*)**

**Note : The sequence for the following steps is *not* critical.**

- ☐ Check open GENERATOR OUTPUT circuit breaker on panel 1C71-S001A(B) on MG set  
Standard: Verifies that the circuit breaker's operating handle is in the "down" position, indicating an open breaker  
Cue: **Circuit breaker handle is down.**  
Notes:
  
- ☐ Check open RPS MG A(B) Output Breakers 1C71-S003A(B) and 1C71-S003C(D)  
Standard: Verifies that the EPAs' operating handles are in the "OFF/RESET OPEN" position  
Cue: **Circuit breakers are in the OFF position.**  
Notes:
  
- ☐ Check test switches on RPS MG A(B) output breakers are in the NORM position  
Standard: Verifies that the "Undervoltage", "Overvoltage" and "Underfrequency" test switches on RPS MG A(B) Output Breakers 1C71-S003A(B) and 1C71-S003C(D) are in the NORM position  
Cue: **All switches in NORM**  
Notes:

**Note : The sequence for the following steps is *critical*.**

- ☐\* *Starts RPS MG A(B)*  
Standard: Simulates depressing the "MOTOR ON" pushbutton on panel 1C71-S001A(B) until redlight is lit  
Cue: **Red ON light is lit**  
Notes:

JOB PERFORMANCE  
MEASURE

---

- ☐ Check generator output voltage  
Standard: Observes voltmeter on motor generator control panel  
1C71-S001A(B) is indicating between 122 and 128 VAC  
**Cue: As indicated** (if MG is running. 124V if not running))  
Notes:
- ☐\* Close GENERATOR OUTPUT circuit breaker  
Standard: Simulates pulling up on the circuit breaker's operating handle on panel  
1C71-S001A(B) to close the breaker  
**Cue: Circuit breaker handle is up.**  
Notes:
- ☐ Check 1C71-S003A(B) indicating power coming in and power available to go out  
Standard Check the ELECT PROT ASSY INPUT and the POWER SUPPLY  
OUTPUT red lights are lit at the 1C71-S003A(B) ELECTRICAL  
PROTECTION ASSEMBLY panel  
**Cue: Red lights are lit**  
Notes:
- ☐ Verify the EPA's trip targets are reset  
Standard: Verifies the absence of orange "trip target" lights on the following  
1C71-S003A(B) relays:  
-- UNDER VOLTAGE  
-- OVER VOLTAGE  
-- UNDER FREQUENCY  
**Cue: No orange lights noticed**  
Notes:

JOB PERFORMANCE  
MEASURE

- 
- ☐\* Close breaker 1C71-S003A(B)  
Standard: Simulates closing breaker 1C71-S003A(B) by rotating its operating handle counter-clockwise until it snaps into the "ON" position  
**Cue: Circuit Breaker handle is in the ON position.**  
Notes:
- ☐ Check that power is going out of EPA 1C71-S003A(B)  
Standard: Checks that the red ELECT PROT ASSY OUTPUT light on 1C71-S003A(B) is lit  
**Cue: Red light is lit**  
Notes:
- ☐ Check 1C71-S003C(D) indicating power coming in and power available to go out  
Standard: Check the ELECT PROT ASSY INPUT and the POWER SUPPLY OUTPUT red lights are lit at the 1C71-S003C(D) ELECTRICAL PROTECTION ASSEMBLY panel  
**Cue: Red lights are lit**  
Notes:
- ☐ Verify the EPA's trip targets are reset  
Standard: Verifies the absence of orange "trip target" lights on the following 1C71-S003C(D) relays:  
-- UNDER VOLTAGE  
-- OVER VOLTAGE  
-- UNDER FREQUENCY  
**Cue: No orange lights noticed**  
Notes:

- 
- ☐\* Close breaker 1C71-S003C(D)  
Standard: Simulates closing breaker 1C71-S003C(D) by rotating its operating handle counter-clockwise until it snaps into the "ON" position  
**Cue: Circuit Breaker handle is in the ON position.**  
Notes:
- ☐ Check that power is going out of EPA 1C71-S003C(D)  
Standard: Checks that the red ELECT PROT ASSY OUTPUT light on 1C71-S003C(D) is lit  
**Cue: Red light is lit**  
Notes:
- ☐ Check GENERATOR A(B) NORMAL FEED AVAILABLE white light are lit on 1H13-P610  
Standard: N/A  
**Cue: RO reports that the white light is lit, and he/she will pick up the task from here**  
Notes:

Task Standard(s):

RPS A(B) Motor/Generator is running at rated speed and voltage.

Page: 10 of 272

**Startup conditions:**

- MG is de-energized
- EPA INPUT and EPA OUTPUT lights are off
- POWER SUPPLY OUTPUT light is off
- Breaker in the TRIP position

**Startup/reset procedure:**

- Startup the MG
  - The EPA INPUT and POWER SUPPLY OUTPUT lights should energize
- Depress the TARGET RESET pushbuttons on all protective relays with activated trip targets.

- Push and rotate the breaker H/S to the RESET-OPEN position then to ON to close the breaker.
  - The EPA OUTPUT light on this EPA, and the EPA INPUT and POWER SUPPLY OUTPUT lights on the downstream EPA, should energize.
- Repeat for the next EPA

**Setpoints**

Parameter	S003A/C	S003B/D
Undervoltage	< 116.5 V	< 117.4 V
Overvoltage	> 131.3 V	> 131.4 V
Underfrequency	< 57.6 Hz	< 57.6 Hz

All trips have a 3.5 second time delay.

## **C11-1B Task 5: CRD Pump Suction Filter Rotation**

Setting: Plant (Inside CAA)  
Type: NLO  
Task: AON-C11-011  
K&A: 201001 A2.06: 2.9/2.9  
GENERIC: 2.1.20 – 4.3/4.2  
Safety Function: 1, Reactivity Control  
Time Required: 15 minutes  
Time Critical: No  
Faulted: No  
Performance: Simulated  
Reference(s): 04-1-01-C11-1/5.3  
Handout(s): 04-1-01-C11-1/5.3  
# Manipulations: 5  
# Critical Steps: 3  
Group: 2

### Simulator Setup/Required Plant Conditions:

- CRD Pump Suction Filter Station, Auxiliary Building accessible

### Safety Concerns:

- Wear standard safety gear for work in the Auxiliary Building.
- Precautions may be taken against accumulation of radioactive gas on clothing.

### Initial Condition(s):

- The in-service CRD suction water filter indicates the need for rotation

### Initiating Cue(s):

- You have been directed to rotate CRD suction water filters.
  - The standby filter is clean.
- Close the inlet valve for the off-going filter.
- A hose is installed on the vent valve for the on-coming filter.
- This task is not time critical.

## **C11-1B Task 5: CRD Pump Suction Filter Rotation**

### **Notes:** (Notes to Evaluator)

- Simulate rotation from the filter that is actually in service to the filter that is actually in standby.
- This task is located on 93 ft elevation Auxiliary Building area 9.
- The area is a Radiation Area.

### **Task Overview:** (Detailed description of task)

The purpose of this task is to rotate the CRD pump suction filters, to prevent the malfunction of and damage to the CRD pumps and the components served by this system.

## **C11-1B Task 5: CRD Pump Suction Filter Rotation**

**Tasks :** Critical tasks are underlined, italicized, and denoted by an (\*)

**Note :** The sequence for the following steps *is critical*

- ☐ Check d-p indicator C11-PDIS-N015 in service  
Standard: Operator checks instrument valves are lockwired and the instrument is indicating.  
**Cue: None**  
Notes: Located on column near CRD Pump B.

NOTE: When the meter is indicating and the instrument root valves are lockwired in position this indicates I&C has placed the instrument in service.

- ☐ Check closed drain valve C11-F113A(B) for on-coming filter.  
Standard: Operator checks drain valve closed by slightly rotating handwheel in the clockwise direction until resistance is felt  
**Cue: You feel resistance in the clockwise direction**  
Notes:
- ☐ Check closed vent valve C11-F112A(B) for on-coming filter.  
Standard: Operator checks vent valve closed by slightly rotating handwheel in the clockwise direction until resistance is felt  
**Cue: You feel resistance in the clockwise direction**  
Notes:
- ☐ Check closed drain valve C11-F425A(B) for on-coming filter.  
Standard: Operator checks drain valve closed by slightly rotating handwheel in the clockwise direction until resistance is felt  
**Cue: You feel resistance in the clockwise direction**  
Notes:

Entergy

ENTERGY NUCLEAR

JOB PERFORMANCE  
MEASURE

Number: GJPM-OPS-C11015

Revision: 01

Page: 17 of 272

- ☐ Check open inlet valve C11-F115A(B) for on-coming filter  
Standard: Operator checks inlet valve open by slightly rotating handwheel in the counter-clockwise direction until resistance is felt.  
Cue: **Resistance is felt in the counter-clockwise direction.**  
Notes:

- ☐ Open vent valve C11-F112A(B) for on-coming filter  
Standard:  
1) Candidate describes standard fill and vent activities per 04-S-04-1  
2) Operator opens vent valve by rotating handwheel in the counter-clockwise direction until resistance is felt  
Cue: **You feel resistance in the counter-clockwise direction**  
Notes:

#### NOTE TO EVALUATOR

**When a non-hardpipe system vent is called for, the standard for successful completion should require the candidate's brief explanation of the need for connecting and routing a vent hose in a manner that complies with radiological control requirements.**

- ☐ Ensure all air is vented from on-coming filter  
Standard: Operator verifies solid stream of water from vent  
Cue: **Solid stream of water**  
Notes:
- ☐\* Close vent valve C11-F112A(B) for on-coming filter  
Standard: Operator closes vent valve by rotating handwheel clockwise direction until resistance is felt  
Cue: **You feel resistance in the clockwise direction**  
Notes:

Entergy

ENTERGY NUCLEAR

JOB PERFORMANCE  
MEASURE

Number: GJPM-OPS-C11015

Revision: 01

Page: 18 of 272

- ☐\* Slowly open outlet valve C11-F114A(B) for on-coming filter  
Standard: Operator opens outlet valve by rotating handwheel in the counter-clockwise direction until resistance is felt.  
**Cue: You feel resistance in the counter-clockwise direction.**  
Notes:

Another Operator is observing C11-PDIS-N015

- ☐\* Slowly close outlet valve C11-F114A(B) for off-going filter  
Standard: Operator slowly closes outlet valve by rotating handwheel in the clockwise direction  
**Cue: As the other operator Filter DP is stable.**  
**Cue: You feel resistance in the clockwise direction**  
Notes: If A filter was placed in-service this will be the B filter valves.

- ☐ Close inlet valve C11-F115A(B) for off-going filter  
Standard: Operator closes inlet valve by rotating handwheel in the clockwise direction until resistance is felt  
**Cue: You feel resistance in the clockwise direction**  
Notes: If A filter was placed in-service this will be the B filter valves.

Task Standard(s):

CRD Pump Suction Filters have been rotated per 04-1-01-C11-1.

These activities are not required for JPMs conducted in the Simulator.
5. Consideration of electrical safety must be made during the performance of certain tasks involving electrical circuits and circuit breakers. The performer should be aware that working on or near energized equipment requires, at a minimum, wearing 100% cotton clothing and low voltage (Class 0) gloves while removing or securing shock hazards such as chains, jewelry, watches and metal-framed eyeglasses. Operating or racking circuit breakers may require additional PPE. Details can be found in Att. 2 of the Electrical Safety Rulebook and General Operating procedure 04-S-04-2 (Operation of Electrical Circuit Breakers)
6. Obtain Shift Management's permission before opening any control panel or compartment. Avoid placing any tools, flashlights, pointing devices or any part of your body inside the panel or compartment in a manner that could disturb the operation of any component within or potentially result in an electric shock).
7. Use of lasers as a pointing tool requires Engineering's prior approval of the specific tool for safe use in the Control area. (specifically, the laser's emissions must be verified as not interfering with any component's intended operation or function).
8. During activities within the CAA, consideration must be given to area dose rates. When in a posted Radiation Area, check your EAD for dose rates and minimize time spent in the area. Entry into High Radiation Areas or Contamination Areas is prohibited.

**Under no circumstances is any candidate  
allowed to operate any equipment outside the simulator  
without the permission of the Evaluator and Shift Management.**

---

## **P64 Task 4:     Perform Control Room Actions in Response to Fire in Plant**

Setting: Control Room  
Type: RO  
Task: CRO-P64-004  
K&A: 286000 A4.05: 3.3/3.3; A2.09: 2.7/2.8  
Generic 2.4.25: 2.9/3.4; 2.4.27: 3.0/3.5; 2.1.30: 3.9/3.4;  
2.1.31: 4.2/3.9; 2.1.16: 2.9/2.8  
Safety Function: Plant Systems (8)  
Time Required: 5 minutes  
Time Critical: No  
Faulted: No  
Performance: Simulate  
Reference(s): 10-S-03-2  
Handout(s): 10-S-03-2  
# Manipulations: 5  
# Critical Steps: 5  
Group #: 2

### Simulator Setup/Required Plant Conditions:

- Area is accessible
- Do not operate plant equipment.
- Notify the Shift Manager and Control Room Supervisor of JPM Performance.

### Safety Concerns:

- DO NOT manipulate Control Room Controls.

### Initial Condition(s):

- The plant is operating at 100% power.
- The control room has just been informed there is heavy black smoke in the Auxiliary Building in Area 9 139 ft. elevation.
- All Auxiliary Building air operated isolation valves have failed closed.

### Initiating Cue(s):

- You have been directed to perform the Control Room Actions in response to the fire and ensure the Fire Brigade has an adequate supply of water for fire suppression.
- This task is not time critical.

## **P64 Task 4:     Perform Control Room Actions in Response to Fire in Plant**

### **Notes:**

1. JPM is to be simulated in the Unit 1 Control Room at the H13-P862 panel.
2. DO NOT OPERATE CONTROL ROOM CONTROLS.
3. Simulate making Plant PA and Radio announcements.

### **Task Overview:**

This task is to perform a start the Motor Driven Fire Pump and align Fire Water to the Unit 1 Auxiliary Building to support Fire Suppression per 10-S-03-2 Response to Fires.

---

## **P64 Task 4:     Perform Control Room Actions in Response to Fire in Plant**

**Tasks** : Critical tasks are underlined, italicized, and denoted by an (\*)

**Note** : The sequence for the following steps *is not* critical.

- ☐\*     *Activate the Fire Alarm and Announce over the plant PA system.*  
**Standard:** Makes an announcement over the plant PA system as to the location of the fire and for the Fire Brigade to respond to the scene. During this announcement activate the Site Fire Alarm.  
**Cue:** PA Announcement and activation of alarm are complete.  
**Notes:** Do NOT allow candidate to make PA announcement or sound alarm. This would activate the actual Fire Brigade.

Candidate should locate the Site Fire Alarm and describe its operation.

*Announcement should be similar to this:*

***“Attention all personnel! There is a (type if known) fire reported at area 9 139 foot elevation in the Auxiliary Building. Fire Brigade to the scene.”***

***CUE: If asked, as Shift Manager direct the candidate to perform the Control Room Actions of the Repsonse to Fires Procedure.***

- ☐\*     *Announce over the plant radio system.*  
**Standard:** Makes an announcement over the plant radio system as to the location of the fire and for the Fire Brigade to respond to the scene.  
**Cue:** Radio Announcement is complete.  
**Notes:** Do NOT allow candidate to make Radio announcement. This would activate the actual Fire Brigade.

*Announcement should be similar to this:*

***“Attention all personnel! There is a (type if known) fire reported at area 9 139 foot elevation in the Auxiliary Building. Fire Brigade to the scene.”***

- ☐\* Verify running or start the motor Driven Fire Pump.  
Standard: Starts the Motor Driven Fire Pump by depressing the START pushbutton on P862 and observes red light on green light off  
**Cue: If asked prior to manipulation cue candidate the green light is on red light is off. Once the candidate performs the action cue red light on green light off**  
Notes:  
DO NOT allow candidate to operate control room controls.
- ☐\* Check open or open 1P64-F010A Fire Water Header Auxiliary Building Isolation Bypass.  
Standard: Observes 1P64-F010A is closed and opens the valve by rotating the handswitch clockwise and observing red light on green light off.  
**Cue: If asked prior to manipulation cue candidate the green light is on red light is off. Once the candidate performs the action cue red light on green light off**  
Notes: Handswitch is on P862.
- ☐\* Check open or open 1P64-F010B Fire Water Header Auxiliary Building Isolation Bypass.  
Standard: Observes 1P64-F010B is closed and opens the valve by rotating the handswitch clockwise and observing red light on green light off.  
**Cue: If asked prior to manipulation cue candidate the green light is on red light is off. Once the candidate performs the action cue red light on green light off**  
Notes: Handswitch is on P862.

**Generic Instructions**

1. Standards and cues for valve operation:
  - a. MOVs:
    - 1) "Turn the valve's handswitch on (panel #)(section#, as applicable) in the (clockwise or counter-clockwise) direction and observe that the valve's red light is (energized or de-energized) and its green light is (energized or de-energized)".
  - b. Manual valves
    - 1) "Turn the valve's handwheel (or other manual operating device) in the (clockwise or counter-clockwise) direction until resistance is felt."
2. The Evaluator should indicate simulated analog gauge readings by pointing a pen or equivalent to the intended place on the gauge.
3. Other methods of simulating control, operation and data collection is at the discretion of the Evaluator.
4. It is expected that the candidate shall locate controlled copies of any required procedures and describe how copies of these procedures would be prepared for use in the field. Only at this time should the evaluator give the candidate previously prepared copies of the procedure(s). This entire procedure need only be performed or simulated once during the entire exam. These activities are not required for JPMs conducted in the Simulator.
5. Consideration of electrical safety must be made during the performance of certain tasks involving electrical circuits and circuit breakers. The performer should be aware that working on or near energized equipment requires, at a minimum, wearing 100% cotton clothing and low voltage (Class 0) gloves while removing or securing shock hazards such as chains, jewelry, watches and metal-framed eyeglasses. Operating or racking circuit breakers may require additional PPE. Group: 1

Simulator

**Simulator Setups:**

- IC 19
- Insert malfunctions
  - c11164@20% Scram Discharge volumen hydraulic block
  - tc079@ 0% Pressure Controller failure on Trigger 1
  - tc082a@0% Bypass Control Valve A closed Trigger 2
  - tc082b@0% Bypass Control Valve B closed Trigger 2
  - tc082c@0% Bypass Control Valve C closed Trigger 2
- Take Simulator out of freeze and place the mode switch to SHUTDOWN.
- Initiate ATWS ARI.
- Initiate and override HPCS.
- Inhibit ADS.

Turn simulator over to candidate.

**Safety Concerns:**

- None

**B21 Task 10:    Operate Turbine Pressure Control / SRVs****Initial Condition(s):**

- The plant was operating at 100% power when a scram occurred.
- All Control rods did not fully insert.
- Emergency Operating Procedure 2A has been entered.

**Initiating Cue(s):**

- You have been directed to take RPV Pressure Control and lower pressure reference setpoint to 900 psig. Maintain RPV pressure 800 – 1060 psig.
- Other operators will control other plant parameters.
- Report when pressure is being controlled on the Main Turbine Bypass Valves at 900 psig.

**B21 Task 10:    Operate Turbine Pressure Control / SRVs****Notes**

1. All controls will be from panels P601 and P680 in the Main Control Room.

**Task Overview:**

This task places the Turbine Pressure Control System operating on the Manual Bypass Jack followed by a failure of the Bypass Valves to open. This requires an alternate method of RPV pressure control using SRVs and a band of 800 to 1060 psig.

**Task Justification:**

The following JPM does not meet the minimum requirements of 14-S-02-18. It either does not have the required number of manipulations or critical steps. However it has been deemed a valid JPM in accordance with 14-S-02-18 step 6.3.13 due to the following:

This task involves observing the reaction of the Main Steam Bypass Control Valves under ATWS conditions when they are to be used to control RPV pressure. The candidate will have to evaluate the response of the valves to changing RPV pressure. Once the valves fail alternate pressure control methods will be employed.

This task is selected because RPV Pressure Control during an ATWS is a critical parameter to limit the cycling of the RPV, the problems presented to the operator controlling RPV water level and the power oscillations that occur when RPV pressure cycles.

In all cases preferred heat sink for the RPV is the Main Condenser either through the Main Turbine, Main Steam Bypass Valves, or Main Steam Line Drains. An accepted means of RPV pressure control is the use of SRVs. This is least desired during an ATWS due to the amount of heat being dumped into Primary Containment and the challenge it may present.

This JPM uses two different means of RPV pressure control.

---

**B21 Task 10:    Operate Turbine Pressure Control / SRVs**

**Tasks:** critical tasks are underlined, italicized and denoted by (\*)

**Note:** Sequence is critical for critical tasks unless otherwise noted.

€\* *Lowers Turbine Pressure Reference Setpoint on P680 to 900 psig.*

Standard:    Uses the LOWER pushbutton on section 9C of P680 for PRESS REF to lower the Pressure Reference Setpoint to 900 psig ( $\pm 30$  psig) (indicated on N32-R610 or N32-R672 section 9B).

**Cue:** As Indicated

Notes:

**SIMULATOR OPERATOR:** Once candidate reports Turbine Pressure reference is at 900psig ( $\pm 30$  psig), ACTIVATE Trigger 1. (Turbine Bypass Control Valves will fail closed.)

**CUE:** When candidate reports failure of the Turbine Bypass Valves closed, as Control Room Supervisor order the candidate to attempt to control pressure using the Manual Bypass Jack in a pressure band 800 – 1060 psig.

€\* Energize Manual Bypass Valve Controller by simultaneously depressing MANUAL BYPASS CONTROL RELEASE pushbutton and the MANUAL BYPASS VALVE CONTROLLER ON pushbutton until ON pushbutton remains illuminated.

Standard: On P680 section 9C energizes Manual Bypass Valve Controller by simultaneously depressing MANUAL BYPASS CONTROL RELEASE pushbutton and the MANUAL BYPASS VALVE CONTROLLER ON pushbutton until ON pushbutton remains illuminated

Cue: As Indicated

Notes: In some cases this may take more than one try, this is acceptable as long as the task is accomplished.

€\* Using the RAISE and/or LOWER pushbuttons open the Turbine Bypass Control Valves to maintain RPV pressure 800 – 1060psig

Standard: Depresses RAISE and /or LOWER pushbuttons to open the Turbine Bypass Control Valves.

Cue: As Indicated

Notes: Valve indication is located on P680-9D meters N11-R602A, B, C. These valves are slow to react.

When Bypass valves open slightly demonstrating the candidate can open the valves, SIMULATOR OPERATOR Activate Trigger 2. (Turbine Bypass Control Valves failed closed.)

**CUE: When candidate reports failure of the Turbine Bypass Valves closed, as Control Room Supervisor order the candidate to attempt to control pressure using SRVs in a pressure band 800 – 1060 psig.**

JOB PERFORMANCE  
MEASURE

€\* Manually open SRVs to maintain RPV pressure 800 – 1060psig

Standard: Manually opens SRVs on P601 by rotating their handswitches clockwise and observing the red light on and green light off to maintain RPV pressure 800 – 1060psig.

Cue: **As Indicated**

Notes: Valve controls are located on P601-19C. Pressure indication is on P601 section 20B B21-UR-R623A and section 17B B21-UR-R623B Post Accident Recorders.

**Candidate may verify Reactor Power and Pressure then observe the already open SRVs then adjust number of open SRVs as required to establish RPV pressure in band.**

**When the Evaluator is satisfied with control the JPM may be terminated.**

Task Standard(s):

RPV Pressure is being maintained using SRVs between 800 – 1060 psig..

Name: \_\_\_\_\_ Time Start: \_\_\_\_\_ Time Stop: \_\_\_\_\_

**Simulator Setups:**

- IC 13 Raise power with control rods to 45% power and shift Recirc Pump A to Fast Speed.
- Trip Recirc Pump B and close the Flow Control Valve to MIN ED position.
- Depress STOP LOCK pushbutton for Recirc Pump B.
- Insert malfunction
  - rr173b Ramp from 0% to 100% Recirc Flow Control Valve ramp open.

**Safety Concerns:**

- None

---

## **B33 Task 11:    Return Recirc Loop to Service at Power**

### **Initial Condition(s):**

- The plant was operating at 45% power when Recirc Pump B tripped on transfer to Fast Speed.
- Electricians corrected the problem with CB-5B that resulted in the Control Power Fuse blowing.
- Recirc Pump 'A' is operating in Fast Speed.
- Seal Purge to Recirc Pump 'B' has been verified at normal pressures.
- Reactor Engineering has verified the plant is operating at < 75% Rod Line and that FCBB is < 1.0.
- Recirc Flow Control Valve is at the MIN ED position.
- Unit 1 Instrument Air Compressor is in lead.
- FCTR has been placed in the SETUP mode.
- Recirc Loop 'A' is operating < 22,300 gpm.
- ALL annunciators associated with the 'B' Hydraulic Power Unit and cooling to Recirc Pump 'B' are clear.
- Chemistry and Radiation Protection have been notified of the Recirc Pump start.
- The Idle Loop Startup Surveillance 06-OP-1B33-V-0005 is being performed by another operator.
- Reactor Water level has been raised to 40 inches.
- All Recirc Pump Temperatures are normal.
- Feedwater flow is > 4.5 Mlbm/hr.
- Reactor Dome temperature is >7.4 degrees above Recirc Loop B.

### **Initiating Cue(s):**

- You have been directed to return Recirc Loop B to service.
- Other operators will control other plant parameters.

---

## **B33 Task 11:    Return Recirc Loop to Service at Power**

### **Notes**

1. All controls will be from panels P680 and P807 in the Main Control Room.

### **Task Overview:**

This task returns a Reactor Recirc Loop to service with the plant above 30% power with conditions such that the pump should operate in Fast Speed. Following the pump start the Flow Control Valve will ramp to full open on its own. This will require operator action to reduce the impact on the Reactor.

---

## **B33 Task 11: Return Recirc Loop to Service at Power**

**Tasks:** critical tasks are underlined, italicized and denoted by (\*)

**Note:** Sequence is critical for critical tasks unless otherwise noted.

- € Check the following Breaker positions for Recirc Pump B:
- \_\_\_ CB-3B, RECIRC PMP FDR B DRIVE MOTOR BKR 252-1205B CLOSED
  - \_\_\_ CB-4B, RECIRC PMP FDR 252-1205C CLOSED
  - \_\_\_ CB-1B, LFMG B MTR FDR 152-1411 OPEN
  - \_\_\_ CB-2B, LFMG B GEN FDR 252-1205A OPEN
  - \_\_\_ CB-5B, RECIRC PMP B FDR 252-1205 OPEN

**Standard:** Observes Breaker indication for Recirc Pump B CB-3B and 4B should be red light on green light off, CB-1B, 2B and 5B should be green light on red light off on P680.

**Cue:** As Indicated

**Notes:** Indications are on P680 section 3C.

NOTE: Candidate may verify Recirc Pump B seal pressures and HPU operation. These were given in the Initial Conditions and are as indicated.

- €\* Raise BOP Transformer tap setting to raise bus voltage on bus 12HE to about 7.2KV.

**Standard:** On P807 raises tap setting on BOP Transformer for bus 12HE to about 7.2 KV as indicated on R22-R603 section 2B of P807.

**Cue:** As Indicated

**Notes:**

**CUE:** Surveillance 06-OP-1B33-V-0005 was just completed one minute ago satisfactorily.

- €\* Depress RELEASE pushbutton on the RECIRC PMP B STOP/STOP LOCK pushbutton.

**Standard:** Depresses RELEASE pushbutton on Recirc Pump B Stop/Stop Lock pushbutton.

**Cue:** As Indicated

**Notes:** Pushbutton is located on P680 section 3C.

JOB PERFORMANCE  
MEASURE

€\* Depress START pushbutton on RECIRC PMP B TRANS TO LFMG/START pushbutton.

Standard: Depresses START pushbutton on RECIRC PMP B TRANS TO LFMG/START pushbutton.

Cue: **As Indicated**

Notes: Pushbutton is located on P680 section 3C.

€ Observe the following for Recirc Pump B:  
\_\_\_\_ CB-5B, RECIRC PMP B FDR 252-1205 CLOSE (red light on green light off)  
\_\_\_\_ RECIRC PMP B amps increase  
\_\_\_\_ RECIRC PMP B rpm increase to 1800 rpm

Standard: Observes indications for Recirc Pump B on P680.

Cue: **As Indicated**

Notes: Indications are on P680 section 3B & C.

€ Lower BOP Transformer tap setting to lower bus voltage on bus 12HE to about 7KV.

Standard: On P807 lowers tap setting on BOP Transformer for bus 12HE to about 7 KV as indicated on R22-R603 section 2B of P807.

Cue: **As Indicated**

Notes:

€ Check proper pump and Jet pump operation on P680.

Standard: On P680 section 3B looks at indications for jet pump flows, Recirc Loop Flow, Core Flow, Seal Pressures.

Cue: **As Indicated**

Notes:

€\* Balance flow between Recirc Loops A and B to establish less than 10% differential by opening on Recirc Pump B Flow Control Valve B.

Standard: Raises Recirc Loop B Flow Control Valve position to raise Recirc Loop B flow.

Cue: As Indicated

Notes: Slide switch on P680 section 3D indication is on section 3B recorder 1C51-FR-R614 (Loop B is the red pen indication.).

**SIMULATOR OPERATOR when candidate raises on Loop Flow, ACTIVATE**

**Trigger 1**

**The candidate may attempt one of several options.**

€ Attempt to lower on the B Loop Flow Control Valve Control.  
Standard: Places Recirc Loop B Flow Control Valve control to LOWER position to lower Recirc Loop B flow.

Cue: As Indicated

Notes: Slide switch on P680 section 3D indication is on section 3B recorder 1C51-FR-R614 (Loop B is the red pen indication.). THIS ACTION WILL HAVE NO EFFECT.

**Option 1**

€\* Trip Recirc Pump B Hydraulic Power Unit to stop valve movement.

Standard: Arms and depresses HPU B SHUTDN pushbutton on P680.

Cue: As Indicated

Notes: Armed collar pushbutton on P680 section 3C. This action will stop valve movement.

This action keeps the Recirc Pump operating, however Reactor Engineering will have to determine the affects on the core.

JOB PERFORMANCE  
MEASURE**Option 2**

€\* Trip Recirc Pump B by depressing STOP or STOP LOCK pushbutton.

Standard: Trips Recirc Pump B by depressing STOP or STOP LOCK pushbutton on P680 indication will be green light on red light off for CB-5B.

Cue: **As Indicated**

Notes: Pushbutton on P680 section 3C. This action will trip the Recirc pump to off.

**Option 3**

This action will require entry into the Reduction of Recirculation Flow ONEP 05-1-02-III-3.

€\* Close RECIRC PMP B DISCH VLV B33-F067B.

Standard: Closes B33-F067B by depressing CLOSE pushbutton on P680 indication will be green light on red light off.

Cue: **As Indicated**

Notes: Pushbutton on P680 section 3C. This action will be performed if the option of Tripping the Recirc pump is taken. If the Recirc Pump remains operating this item is not critical.

€ Plot operation on Power to Flow map.

Standard: Plots operation using rms and depresses HPU B SHUTDN pushbutton on P680.

Cue: **As Indicated**

Notes: Plot should be in the Monitor Region.

**Task Standard(s):**

Actions have been taken to limit reactor power rise due to the Recirc Flow Control Valve malfunction.

## Return Recirc Loop to Service at Power

### Give this page to the student

#### Initial Condition(s):

- The plant was operating at 45% power when Recirc Pump B tripped on transfer to Fast Speed.
- Electricians corrected the problem with CB-5B that resulted in the Control Power Fuse blowing.
- Recirc Pump 'A' is operating in Fast Speed.
- Seal Purge to Recirc Pump 'B' has been verified at normal pressures.
- Reactor Engineering has verified the plant is operating at < 75% Rod Line and that FCBB is < 1.0.
- Recirc Flow Control Valve is at the MIN ED position.
- Unit 1 Instrument Air Compressor is in lead.
- FCTR has been placed in the SETUP mode.
- Recirc Loop 'A' is operating < 22,300 gpm.
- ALL annunciators associated with the 'B' Hydraulic Power Unit and cooling to Recirc Pump 'B' are clear.
- Chemistry and Radiation Protection have been notified of the Recirc Pump start.
- The Idle Loop Startup Surveillance 06-OP-1B33-V-0005 was completed satisfactorily 1 minute ago.
- Reactor Water level has been raised to 40 inches.
- All Recirc Pump Temperatures are normal.
- Feedwater flow is > 4.5 Milbm/hr.
- Reactor Dome temperature is >7.4 degrees above Recirc Loop B.

#### Initiating Cue(s):

- You have been directed to return Recirc Loop B to service.
- Other operators will control other plant parameters.

## **Generic Instructions**

1. Standards and cues for valve operation:
  - a. MOVs:
    - 1) "Turn the valve's handswitch on (panel #)(section#, as applicable) in the (clockwise or counter-clockwise) direction and observe that the valve's red light is (energized or de-energized) and its green light is (energized or de-energized)".
  - b. Manual valves
    - 1) "Turn the valve's handwheel (or other manual operating device) in the (clockwise or counter-clockwise) direction until resistance is felt."
2. The Evaluator should indicate simulated analog gauge readings by pointing a pen or equivalent to the intended place on the gauge.
3. Other methods of simulating control, operation and data collection is at the discretion of the Evaluator.
4. It is expected that the candidate shall locate controlled copies of any required procedures and describe how copies of these procedures would be prepared for use in the field. Only at this time should the evaluator give the candidate previously prepared copies of the procedure(s). This entire procedure need only be performed or simulated once during the entire exam. These activities are not required for JPMs conducted in the Simulator.
5. Consideration of electrical safety must be made during the performance of certain tasks involving electrical circuits and circuit breakers. The performer should be aware that working on or near energized equipment requires, at a minimum, wearing 100% cotton clothing and low voltage (Class 0) gloves while removing or securing shock hazards such as chains, jewelry, watches and metal-framed eyeglasses. Operating or racking circuit breakers may require additional PPE. Details can be found in Att. 2 of the Electrical Safety Rulebook and General Operating procedure 04-S-04-2 (Operation of Electrical Circuit Breakers)
6. Obtain Shift Management's permission before opening any control panel or compartment. Avoid placing any tools, flashlights, pointing devices or any part of your body inside the panel or compartment in a manner that could disturb the operation of any component within or potentially result in an electric shock).
7. Use of lasers as a pointing tool requires Engineering's prior approval of the specific tool for safe use in the Control area. (specifically, the laser's emissions must be verified as not interfering with any component's intended operation or function).
8. During activities within the CAA, consideration must be given to area dose rates. When in a posted Radiation Area, check your EAD for dose rates and minimize time spent in the area. Entry into High Radiation Areas or Contamination Areas is prohibited.

**Under no circumstances is any candidate  
allowed to operate any equipment outside the simulator  
without the permission of the Evaluator and Shift Management.**

Plant / Low Power / Emergency – Abnormal Operations

Simulator Setups:  
    o N/A

Safety Concerns:  
    • None

Initial Condition(s):  
    • The Control Room has been abandoned due to toxic gas.  
    • The Reactor has been scrammed and RPS reset.  
    • All control rods are fully inserted.  
    • Control is being established at the Remote Shutdown Panels.

Initiating Cue(s):  
    • You have been directed to start Standby Service Water (SSW) A and B and supply all available loads.

## **C61 Task 9:     Start SSW A & B and supply all loads from Remote Shutdown Panels**

### **Notes**

1. All controls will be from panels P150 and P151 in the Remote Shutdown Panel Room.

### **Task Overview:**

This task aligns Standby Service Water in operation through all loads from the Remote Shutdown Panels. This action would be taken in the event of Control Room Abandonment for toxic gas, fire, or terrorist control of the Main Control Room.

---

## **C61 Task 9: Start SSW A & B and supply all loads from Remote Shutdown Panels**

**Tasks:** critical tasks are underlined, italicized and denoted by (\*)

**Note:** Sequence is critical for critical tasks unless otherwise noted.

**May elect to perform SSW A first or B order of systems is NOT critical.**

**SSW A (Attachment VIII section 3.8.1a)**

### **Panel H22-P150**

€ Check open/open P41-F068A, SSW OUTL FM RHR HX A VLV.  
Standard: Observes P41-F068A open red light on green light off.  
**Cue: Red light on Green light off**  
Notes:

€\* *Start P41-C001A, SSW PMP A.*  
Standard: Starts SSW Pump A by rotating handswitch on P150 clockwise to START and observing red light on green light off.  
**Cue: Red light on Green light off**  
Notes:

€\* *Open P41-F001A, SSW PMP DISCH VLV.*  
Standard: Opens P41-F001A, SSW PMP DISCH VLV by rotating the key lock switch clockwise on P150 and observing red light on green light off.  
**Cue: Red light on Green light off**  
Notes:

€\* Open P41-F014A, SSW INL TO RHR HX A VLV.

Standard: Opens P41-F014A, SSW INL TO RHR HX A VLV by rotating the handswitch clockwise on P150 and observing red light on green light off.

Cue: Red light on Green light off

Notes: The interlock between P41-F006A and F014A is bypassed at the Remote Shutdown Panels.

€\* Open P41-F005A, SSW LOOP A RTN TO CLG TWR A.

Standard: Opens P41-F005A, SSW LOOP A RTN TO CLG TWR A by rotating the handswitch clockwise on P150 and observing red light on green light off.

Cue: Red light on Green light off

Notes:

**If asked, Cue P41-F006A is Red Light ON Green Light OFF.**

€\* Close P41-F006A, SSW LOOP A RECIRC VLV.

Standard: Closes P41-F006A, SSW LOOP A RECIRC VLV by rotating the handswitch counter-clockwise on P150 and observing green light on red light off.

Cue: Green light on Red light off

Notes: Order NOT Critical. The interlock between P41-F006A and F014A is bypassed at the Remote Shutdown Panels.

€\* Start P41-C003A, SSW CLG TWR FAN A.

Standard: Starts P41-C003A, SSW CLG TWR FAN A by rotating the handswitch clockwise on P150 and observing red light on green light off.

Cue: Red light on Green light off

Notes: Order for Fan A and Fan B is NOT critical.

€\* Start P41-C003B, SSW CLG TWR FAN B.

Standard: Starts P41-C003B, SSW CLG TWR FAN B by rotating the handswitch clockwise on P150 and observing red light on green light off.

**Cue: Red light on Green light off**

Notes: Order for Fan A and Fan B is NOT critical.

€\* Open P41-F018A, SSW INL TO DG11 WTR CLR.

Standard: Opens P41-F018A, SSW INL TO DG11 WTR CLR by rotating the handswitch clockwise on P150 and observing red light on green light off.

**Cue: Red light on Green light off**

Notes: Order NOT Critical.

# Critical Steps: 8  
Group: 1

Simulator / Low Power

Simulator Setups:

- IC 1 Secure RHR A SDC and SSW A
- SSW B in operation to the RHR B heat exchangers
- B21-F065A; E12- F004B; F008; F064B; F009; F053B and F006B are closed.
- B21-F065B is open.

Safety Concerns:

- None

Initial Condition(s):

- RHR A was previously in service for Shutdown Cooling but was secured.
- RHR B has been flushed, warmed up and is ready to be placed in Shutdown Cooling.
- SSW B is in operation.
- ADHR is not in operation.

Initiating Cue(s):

- You have been directed to place RHR B in Shutdown Cooling through E12-F053B, starting at Step 4.2.2c(12) of SOI 04-1-01-E12-2. Establish RHR flow with E12-F003B full open and E12-F048B full closed to maximize RPV cooldown rate.

---

## **E12 Task 1:     Startup Shutdown Cooling B**

### **Notes**

1. All controls will be from panels P601 and P680 in the Main Control Room.
2. Unless otherwise indicated, all valves are in the "E12" system.

### **Task Overview:**

This task places the RHR system in service for Shutdown Cooling using the normal (E12-F053B) flowpath. This is a Tech Spec Decay Heat Removal method. Throttling of RHR Shutdown Cooling flow caused damage to RHR Instrumentation piping during RF12.

---

## **E12 Task 1:     Startup Shutdown Cooling B**

**Tasks: critical tasks are underlined, italicized and denoted by (\*)**

**Note: Sequence is critical for critical tasks unless otherwise noted.**

€ Place the RHR B MOV TEST switch in TEST  
Standard: Turns the RHR B MOV TEST switch clockwise until it snaps in the TEST position  
**Cue: As Indicated**  
Notes: Indication is on P601-17B. Will receive MOVIS IN TEST Status Light and RHR B OOSVC annunciator.

€ Open or check open the following valves:

- € E12-F010 INLET TO SHUTDOWN COOLING
- € \* E12-F008 RHR SHUTDN CLG OTBD SUCT VLV
- € \* E12-F009 RHR SHUTDN CLG INBD SUCT VLV
- € \* E12-F006B RHR B PMP SUCT FM SHUTDN CLG
- € E12-F047B RHR HX INL VLV
- € E12-F048B RHR HX BYP VLV

Standard: Checks open E12-F010; F047B on P601 by observing their red light on and their green light off. E12-F048B has a valve position indication meter on P601-17B to indicate 100%. OPENS E12-F008; F009 and F006B by turning their handswitches on P601 clockwise in the OPEN direction and observing its red light is on and its green light is off.

**Cue: As Indicated**  
Notes: Valves are controlled from P601-17C

JOB PERFORMANCE  
MEASURE

---

€ \* Close E12-F003B RHR HX B OUTL VLV-

Standard: Closes E12-F003B by turning its handswitch on P601 counter - clockwise in the CLOSE direction and holding while observing position indication meter on P601-17B lower to indicate 0%.

Cue: As Indicated

Notes: Valve is controlled from P601-17C

€ \* Close or check closed B21-F065B FW INL SHUTOFF VLV

Standard: Checks closed B21-F065B on P680 by observing its green light on and its red light off.

Cue: As Indicated

Notes: Valve indication is located on P680-2C

**NOTE: The Candidate should identify OPTION 1 is the method to be used per NOTE at step 4.2.2c(14).**

NOTE: The following two steps have to be performed within 8 seconds to prevent causing E12-F064B from opening for minimum flow which would drain the RPV to the Suppression Pool.

€ \* Start RHR PMP B

Standard: Starts RHR pump B by turning its handswitch on P601 clockwise in the START direction and observing its red light is on and its green light is off.

Cue: As Indicated

Notes: Pump handswitch is on P601-17C

JOB PERFORMANCE  
MEASURE€ \* Open E12-F053B RHR B SHUTDN CLNGRTN TO FW

Standard: Opens E12-F053B by turning its handswitch on P601 clockwise in the OPEN direction and holding it until its red light is on and its green light is off

Cue: As Indicated

Notes:

€ \* Slowly opens E12-F003B RHR HX B OUTL VLV

Standard: Slowly opens E12-F003B by turning its handswitch on P601 clockwise to jog the valve in the OPEN direction and while observing the valve position indication on P601-17B rise to indicate 100%.

Cue: As Indicated

Notes: Candidate should observe RHR Flow on E12-R603B and temperatures on E12-R601.

NOTE: Due to current RPV temperature 100 degree F / Hr cooldown rate cannot be exceeded.

€ \* Slowly throttle E12-F048B RHR HX BYP VLV closed

Standard: Throttles E12-F048B closed by turning its handswitch on P601 counter - clockwise in the CLOSE direction.

Cue: As indicated

Notes: Indication on E12-R603B panel P601-17B

## **Generic Instructions**

1. Standards and cues for valve operation:
  - a. MOVs:
    - 1) "Turn the valve's handswitch on (panel #)(section#, as applicable) in the (clockwise or counter-clockwise) direction and observe that the valve's red light is (energized or de-energized) and its green light is (energized or de-energized)".
  - b. Manual valves
    - 1) "Turn the valve's handwheel (or other manual operating device) in the (clockwise or counter-clockwise) direction until resistance is felt."
2. The Evaluator should indicate simulated analog gauge readings by pointing a pen or equivalent to the intended place on the gauge.
3. Other methods of simulating control, operation and data collection is at the discretion of the Evaluator.
4. It is expected that the candidate shall locate controlled copies of any required procedures and describe how copies of these procedures would be prepared for use in the field. Only at this time should the evaluator give the candidate previously prepared copies of the procedure(s). This entire procedure need only be performed or simulated once during the entire exam. These activities are not required for JPMs conducted in the Simulator.
5. Consideration of electrical safety must be made during the performance of certain tasks involving electrical circuits and circuit breakers. The performer should be aware that working on or near energized equipment requires, at a minimum, wearing 100% cotton clothing and low voltage (Class 0) gloves while removing or securing shock hazards such as chains, jewelry, watches and metal-framed eyeglasses. Operating or racking circuit breakers may require additional PPE. Details can be found in Att. 2 of the Electrical Safety Rulebook and General Operating procedure 04-S-04-2 (Operation of Electrical Circuit Breakers)
6. Obtain Shift Management's permission before opening any control panel or compartment. Avoid placing any tools, flashlights, pointing devices or any part of your body inside the panel or compartment in a manner that could disturb the operation of any component within or potentially result in an electric shock).
7. Use of lasers as a pointing tool requires Engineering's prior approval of the specific tool for safe use in the Control area. (specifically, the laser's emissions must be verified as not interfering with any component's intended operation or function).
8. During activities within the CAA, consideration must be given to area dose rates. When in a posted Radiation Area, check your EAD for dose rates and minimize time spent in the area. Entry into High Radiation Areas or Contamination Areas is prohibited.

**Under no circumstances is any candidate  
allowed to operate any equipment outside the simulator  
without the permission of the Evaluator and Shift Management.**

Simulator

### Simulator Setups:

- ANY IC
- Lower Suppression Pool Water Level to 18.13 feet.
- Defeat Suppression Pool Makeup A & B
- Insert Malfuction **e51187g** on RCIC Minimum Flow Valve Closed (loss of power on stroke)

### Safety Concerns:

- None

## **E22 Task 15:    Raise Suppression Pool Level using RCIC/HPCS**

### **Initial Condition(s):**

- The plant is operating at 100% power.
- Suppression Pool Water Level is low due to a leak in RHR C Pump Room.
- Standby Service Water A is operating.
- Emergency Operating Procedure 3 has been entered.
- Suppression Pool Makeup is out of service.

### **Initiating Cue(s):**

- You have been directed to perform a controlled startup of RCIC and raise Suppression Pool water level to the normal band using RCIC.

### **Notes**

1. All controls will be from panels P601 and P870 in the Main Control Room.

### **Task Overview:**

This task raises Suppression Pool Water Level using methods allowed per 05-1-01-EOP-3 using RCIC / HPCS.

---

## **E22 Task 15:    Raise Suppression Pool Level using RCIC/HPCS**

**Tasks:** critical tasks are underlined, italicized and denoted by (\*)

**Note :** The sequence for the following steps is critical.

- € Start RCIC RM FAN COIL UNIT.  
Standard: Starts RCIC RM Fan Coil Unit by placing RCIC RM FAN COIL UNIT handswitch to the clockwise direction on P870 and observes red light on green light off.  
**Cue: As Indicated**  
Notes: Indication is on P870-1C.
- € Close E51-F268 PRESS LOCK ISOL FOR F013  
Standard: Contacts Aux Bldg Operator to close E51-F268 PRESS LOCK ISOL FOR F013.  
**Cue: E51-F268 is closed.**  
Notes: Field operation.
- € \* Shift RCIC FLO CONT to MANUAL.  
Standard: Shifts RCIC FLO CONT to MANUAL by placing slide switch on controller to left for controller on P601.  
**Cue: As Indicated**  
Notes: Indication is on P601-21B.
- € \* Reduce RCIC FLO CONT output to minimum.  
Standard: Reduces RCIC FLO CONT to output to minimum by depressing left pushbutton on controller until horizontal meter reads zero on P601.  
**Cue: As Indicated**  
Notes: Indication is on P601-21B.

€ \* Open E51-F046 RCIC WTR TO TURB LUBE OIL CLR

Standard: Opens E51-F046 by turning its handswitch on P601 clockwise in the OPEN direction and holding while observing red light on and green light off.

Cue: As Indicated

Notes: Valve is controlled from P601-21C

€ \* Start Turbine Gland Seal Compressor using RCIC GL SEAL COMPR handswitch.

Standard: Starts RCIC Glans Seal Compressor by turning handswitch clockwise on P601 and observing red light on green light off.

Cue: As Indicated

Notes: Indication is on P601-21C.

€ \* Open E51-F095 RCIC STM SPLY BYP VLV

Standard: Opens E51-F095 by turning its handswitch on P601 clockwise in the OPEN direction and holding while observing red light on and green light off.

Cue: As Indicated

Notes: Valve is controlled from P601-21C

**NOTE: As soon as the candidate recognizes the failure of the Minimum Flow Valve, the candidate may proceed to secure the RCIC Turbine. If this is the case the following three steps will be N/A.**

## € After 6 seconds open E51-F045 RCIC STM SPLY TO RCIC TURB

Standard: After approximately 6 seconds E51-F045 by turning its handswitch on P601 clockwise in the OPEN direction and holding while observing red light on and green light off.

Cue: As Indicated

Notes: Valve is controlled from P601-21C

NOTE: May not be performed is RCIC is tripped.

JOB PERFORMANCE  
MEASURE

- € Raise RCIC Turbine speed to greater than 2000 rpm by opening on RCIC FLO CONT output.  
Standard: Raises RCIC Turbine speed to > 2000 rpm using RCIC FLO CONT by depressing the OPEN pushbutton and observing E51-R605 on section 21B of P601.  
Cue: **As Indicated**  
Notes: Indication is on P601-21B.

NOTE: May not be performed if RCIC is tripped.

NOTE: The following steps may be performed in any order.

- € Open or check open E51-F019 RCIC MIN FLO to SUPP POOL  
Standard: Opens E51-F019 by turning its handswitch on P601 clockwise in the OPEN direction and holding while observing red light on and green light off.  
Cue: **As Indicated**  
Notes: Candidate should observe the valve loses power and fails to open.  
Valve is controlled from P601-21C

**CUE: If asked by the candidate to check the valve circuit breaker, report as the Roving Operator circuit breaker 72-11A56 is in the TRIP FREE condition and there is a strange odor in the area.**

**Candidate should inform the Control Room Supervisor (CRS) of the problem. IF ASKED, CUE the candidate to secure the RCIC Turbine and raise Suppression Pool Level via the HPCS gravity flow. Once the RCIC Turbine is tripped another operator will complete the RCIC shutdown.**

- € Close or check closed E51-F022 RCIC INBD TEST RTN TO CST  
Standard: Observes indication for E51-F022 as green light on red light off on P601.  
Cue: **As Indicated**  
Notes: Valve is controlled from P601-21C  
NOTE: May not be performed.

- € Close or check closed E51-F059 RCIC OUTBD TEST RTN TO CST  
Standard: Observes indication for E51-F059 as green light on red light off on P601.  
Cue: **As Indicated**  
Notes: Valve is controlled from P601-21C  
NOTE: May not be performed.

---

## Secure RCIC

- € Observe RCIC INIT RESET pushbutton white light is out.  
Standard: Observes RCIC INIT RESET pushbutton white light is out.  
Cue: As Indicated.  
Notes: Indication is on P601 section 21B.  
NOTE: May not be performed. This is acceptable.
- € Reduce RCIC flow to <100 gpm using RCIC FLO CONT.  
Standard: Reduces RCIC flow using RCIC FLO CONT.  
Cue: As Indicated  
Notes: Candidate may not perform, this step since there is no RCIC flow. This is acceptable.
- € Close E51-F013 RCIC INJ SHUTOFF VLV.  
Standard: Observes indication for E51-F013 closed as green light on red light off on P601.  
Cue: As Indicated  
Notes: Candidate may not perform, the valve was never opened. This is acceptable.

## **RCIC may be secured by option 1 or 2 either is acceptable.**

### **Option 1 to secure RCIC**

- € \* TRIP RCIC Turbine  
Standard: Trips the RCIC Turbine using the RCIC TURBINE TRIP pushbutton on P601 and observes green light on and red light off for the RCIC Trip Throttle valve.  
Cue: As Indicated  
Notes: Controlled from P601-21C

**Option 2 to secure RCIC****€ \* Close E51-F095 RCIC STM SPLY BYP VLV**

**Standard:** Closes E51-F095 by turning its handswitch on P601 counter-clockwise in the CLOSE direction and holding while observing green light on and red light off.

**Cue:** As Indicated

**Notes:** Valve is controlled from P601-21C

**€ \* Close E51-F045 RCIC STM SPLY TO RCIC TURB**

**Standard:** Closes E51-F045 by turning its handswitch on P601 counter-clockwise in the CLOSE direction and holding while observing green light on and red light off.

**Cue:** As Indicated

**Notes:** Valve is controlled from P601-21C

ANOTHER OPERATOR WILL PICKUP THE RCIC OPERATIONS FROM  
HERE.

**May need to cue the candidate to another operator securing RCIC and as  
Control Room Supervisor direct candidate to raise Suppression Pool Level via  
HPCS gravity flow.**

JOB PERFORMANCE  
MEASURE

---

**HPCS Gravity Flow**

€ \* *Throttle open E22-F023 HPCS TEST RTN TO SUPP POOL*

Standard: Opens E22-F023 by turning its handswitch on P601 clockwise in the OPEN direction and holding while observing red light on and green light off.

Cue: **As Indicated**

Notes: Valve is controlled from P601-16C

€ Observes CST Level lowering and Suppression Pool Level rising on P870

Standard: Checks CST Level and Suppression Pool Level on P870.

Cue: **As Indicated**

Notes: The candidate may use any of the following indications:

E30-LR-R600A	P870 4B	Suppression Pool Level
E30-LR-R600B	P870 10B	Suppression Pool Level
P11-LI-R601	P870 5B	CST Level
SPDS for Suppression Pool Level		

**When Suppression Pool Level has been raised to the satisfaction of the Evaluator, the Evaluator may terminate the JPM.**

Task Standard(s):

Suppression Pool level is rising using HPCS gravity flow.

Name: \_\_\_\_\_ Time Start: \_\_\_\_\_ Time Stop: \_\_\_\_\_

# Critical Steps: 7  
Group: 2

Simulator / Low Power

**Simulator Setups:**

- IC
- Ensure RWCU is operating in Pre-Pump mode.
- Ensure G33-F033 controller G33-R606 is set at 0%.
- Insert malfunction
  - di\_1G33-M612 P680/11C G33-F046 CLOSE
  - di\_1G33-M625 P680/11C G33-F041 CLOSE

**Safety Concerns:**

- None

---

**G33 Task 11:      Align RWCU for Vessel Level Control****Initial Condition(s):**

- The plant is in mode 2 with coolant temperature approximately \_140\_ degrees F.
- Plant startup is in progress.
- Component Cooling Water is in operation.
- RWCU is in Pre-Pump mode of operation with two pumps and two filters in service.
- Radiation Protection has been notified.

**Initiating Cue(s):**

- You have been directed to align RWCU for blowdown to the Main Condenser at 60 gpm.
- Other operators will control other plant parameters.

---

**G33 Task 11:      Align RWCU for Vessel Level Control****Notes**

1. All controls will be from panels P680 and P870 in the Main Control Room.

**Task Overview:**

This task aligns Reactor Water Cleanup for reactor vessel level control using blowdown to the Main Condenser/Radwaste. This action is performed during reactor startup/heatup to control reactor water level.

---

## **G33 Task 11:      Align RWCU for Vessel Level Control**

**Tasks:** critical tasks are underlined, italicized and denoted by (\*)

**Note:** Sequence is critical for critical tasks unless otherwise noted.

€\* *Adjust G33-F033, RWCU SYS BLWDN F/D CONT VLV to 10 % open.*

Standard:    Adjusts G33-F033 to 10% open on controller G33-R606 by placing the controller in MANUAL and opening to indicated 10% on the horizontal meter.

**Cue: As Indicated**

Notes: Indications are on P680 section 11D.

€    Place NSSSS INBD MOV TEST switch to TEST.

Standard:    On P601 section 18B places the keylock switch for NSSSS INBD MOV TEST to TEST clockwise and observes annunciator “Rx Div 2 Isol Sys OOSVC” is received P601-19A-G3.

**Cue:    As Indicated**

Notes:

€\* *Open or check open G33-F028, RWCU BLWDN CTMT INBD ISOL.*

Standard:    Opens G33-F028, RWCU BLWDN CTMT INBD ISOL by rotating the key lock switch clockwise on P680 and observing red light on green light off.

**Cue:    As Indicated**

Notes: Pushbutton is located on P680 section 11C.

€ Place NSSSS OUTBD MOV TEST switch to TEST.  
Standard: On P601 section 19B places the keylock switch for NSSSS OUTBD MOV TEST to TEST clockwise and observes annunciator "Rx Div 1 Isol Sys OOSVC" is received P601-19A-H3.

Cue: As Indicated

Notes:

€\* Open or check open G33-F034, RWCU BLWDN CTMT OUTBD ISOL.  
Standard: Opens G33-F034, RWCU BLWDN CTMT OUTBD ISOL by rotating the key lock switch clockwise on P680 and observing red light on green light off.

Cue: As Indicated

Notes: Pushbutton is located on P680 section 11C.

€\* Open or check open G33-F046, RWCU BLWDN TO MN CNDSR.  
Standard: Opens G33-F046, RWCU BLWDN TO MN CNDSR by depressing the OPEN pushbutton on P680 and observing red light on green light off.

Cue: As Indicated

Notes: Pushbutton is located on P680 section 11C.

G33-F046 will not change position when the pushbutton is depressed.

**Candidate should inform the Control Room Supervisor of this malfunction. AS CRS, CUE candidate to attempt to use the BYPASS Valve G33-F041.**

JOB PERFORMANCE  
MEASURE

€\* Open or check open G33-F041, RWCU BLWDN TO MN CNDSR BYP.  
Standard: Opens G33-F041, RWCU BLWDN TO MN CNDSR BYP by depressing the OPEN pushbutton on P680 and observing red light on green light off.

Cue: As Indicated

Notes: Pushbutton is located on P680 section 11C.

G33-F041 will not change position when the pushbutton is depressed.

**Candidate should inform the Control Room Supervisor of this malfunction. AS CRS, CUE candidate to change the flowpath to blowdown to Radwaste. Maintenance will be contacted to investigate the problems with G33-F041 and F046.**

€\* Open G33-F035, RWCU BLWDN TO RADWST.  
Standard: Opens G33-F035, RWCU BLWDN TO RADWST by depressing the OPEN pushbutton on P680 and observing red light on green light off.

Cue: As Indicated

Notes: Pushbutton is located on P680 section 11C.

€\* Adjust G33-F033, RWCU SYS BLWDN F/D CONT VLV to attain 60 gpm flow as indicated on G33-FI-R602. Opening G33-F031, RWCU BLWDN ORF BYP VLV to obtain additional flow as necessary.

Standard: Adjusts G33-F033, RWCU SYS BLWDN F/D CONT VLV to attain 60 gpm flow as indicated on G33-FI-R602. Opening G33-F031, RWCU BLWDN ORF BYP VLV to obtain additional flow as necessary

Cue: As Indicated

Notes: Indications are on P680 section 11D.

**Candidate may request permission to throttle G33-F042 closed to obtain desired flow. If so, CUE candidate to throttle G33-F042. Candidate may elect to open G33-F031 to obtain additional flow. Either of these methods are acceptable.**

JOB PERFORMANCE  
MEASURE

- € Place NSSSS OUTBD MOV TEST switch to NORM.  
Standard: On P601 section 19B places the keylock switch for NSSSS OUTBD MOV TEST to NORM counter-clockwise and observes annunciator "Rx Div 1 Isol Sys OOSVC" clears P601-19A-H3.  
Cue: **As Indicated**  
Notes:

NOTE: Order between INBD and OUTBD is not essential.

- € Place NSSSS INBD MOV TEST switch to NORM.  
Standard: On P601 section 19B places the keylock switch for NSSSS INBD MOV TEST to NORM counter-clockwise and observes annunciator "Rx Div 2 Isol Sys OOSVC" clears P601-19A-G3.  
Cue: **As Indicated**  
Notes:

NOTE: Order between INBD and OUTBD is not essential.

Candidate may elect to leave MOV Test Switches in TEST. This is acceptable.

Task Standard(s):

RWCU is aligned to blow down the reactor to Radwaste at 60 gpm as indicated on G33-R602.

4. It is expected that the candidate shall locate controlled copies of any required procedures and describe how copies of these procedures would be prepared for use in the field. Only at this time should the evaluator give the candidate previously prepared copies of the procedure(s). This entire procedure need only be performed or simulated once during the entire exam. These activities are not required for JPMs conducted in the Simulator.
5. Consideration of electrical safety must be made during the performance of certain tasks involving electrical circuits and circuit breakers. The performer should be aware that working on or near energized equipment requires, at a minimum, wearing 100% cotton clothing and low voltage (Class 0) gloves while removing or securing shock hazards such as chains, jewelry, watches and metal-framed eyeglasses. Operating or racking circuit breakers may require additional PPE. Details can be found in Att. 2 of the Electrical Safety Rulebook and General Operating procedure 04-S-04-2 (Operation of Electrical Circuit Breakers)
6. Obtain Shift Management's permission before opening any control panel or compartment. Avoid placing any tools, flashlights, pointing devices or any part of your body inside the panel or compartment in a manner that could disturb the operation of any component within or potentially result in an electric shock).
7. Use of lasers as a pointing tool requires Engineering's prior approval of the specific tool for safe use in the Control area. (specifically, the laser's emissions must be verified as not interfering with any component's intended operation or function).
8. During activities within the CAA, consideration must be given to area dose rates. When in a posted Radiation Area, check your EAD for dose rates and minimize time spent in the area. Entry into High Radiation Areas or Contamination Areas is prohibited.

**Under no circumstances is any candidate  
allowed to operate any equipment outside the simulator  
without the permission of the Evaluator and Shift Management.**

---

**R27 Task 32:      Distribute Loads between ST-11 and ST-21**

Setting: Simulator  
Type: RO  
Task: CRO-R20/27-003; CRO-R20/27-008  
K&A: 262001 A4.01 – 3.4/3.7; A4.02 – 3.4/3.4; A4.04 – 3.6/3.7;  
A4.05 – 3.3/3.3; 2.1.30 – 3.9/3.4; 2.1.31 – 4.2/3.9  
295003 AA1.01 – 3.7/3.8; AA1.02 – 4.2/4.3; AA2.05 – 3.9/4.2

Group: 1

Simulator

Simulator Setups:

- ANY IC
- Transfer 12HE; 13AD; and 15AA to ST-21
- In the computer cross tie 18AG and 28AG with 28AG supplying 18AG
- Insert Malfunction r21133b for Service Transformer 21 Lockout on Trigger 2
- Insert Malfunction n41140b for Diesel Generator 12 fail to start on Trigger 2

Safety Concerns:

- None

---

**R27 Task 32:      Distribute Loads between ST-11 and ST-21****Initial Condition(s):**

- All electrical buses are being supplied from Service Transformer 21.
- Preventive maintenance on Service Transformer 11 is complete and Entergy – Mississippi has released the transformer.
- GGNS 34.5 KV switchyard has been restored to a normal configuration with ESF and BOP Transformers energized.
- All Red Tags are cleared.
- All circuit breakers are racked in.

**Initiating Cue(s):**

- You have been directed to align BOP buses 12HE, 13AD and 15AA in their normal configuration.
- Another operator will transfer bus 18AG.

**Notes**

1. All controls will be from panels P864 and P807 in the Main Control Room.

**Task Overview:**

This task transfers buses from all being supplied by a single Service Transformer to a preferred alignment. Following the transfer the on-coming Service Transformer will experience a lockout. Additionally the ESF bus will not be automatically energized by the Diesel Generator requiring operator action to align to an offsite power source.

This task implements SOER 2002-3 Large Power Transformer Reliability.

---

**R27 Task 32:      Distribute Loads between ST-11 and ST-21**

**Tasks:** critical tasks are underlined, italicized and denoted by (\*)

**NOTE:** The order in which buses are transferred/restored is NOT critical.

**BUS 12HE**

€ Ensure XFMR 11B energized up to Bus Feeder Breaker 252-1201 by checking the following:

€ Check closed disconnect J5234 FDR to XFMR ST-11

Standard: Observes disconnect indication on P807 for J5234 red light on green light off.

**Cue:** As Indicated

Notes: Indication is on P807-3B.

€ Check closed circuit breaker 552-1105 XFMR ST-11 FDR to bus 11R

Standard: Observes circuit breaker indication on P807 for 552-1105 red light on green light off.

**Cue:** As Indicated

Notes: Indication is on P807-2C.

€ Check indicator R25-R603 34.5 bus voltage

Standard: Observes indicator R25-R603 on P807 section 1B indicates approximately 34.5KV.

**Cue:** As Indicated

Notes: Indication is on P807-1B.

€ Check closed circuit breaker 552-1101 11R FDR to bus 12R

Standard: Observes circuit breaker indication on P807 for 552-1101 red light on green light off.

**Cue:** As Indicated

Notes: Indication is on P807-1C.

JOB PERFORMANCE  
MEASURE

- 
- € Check closed disconnect 589-1101D BOP XFMR 11B disconnect  
Standard: Observes disconnect indication on P807 for 589-1101D red light on green light off.  
**Cue: As Indicated**  
Notes: Indication is on P807-1C.
- € Check ENERGIZED status light is on  
Standard: Observes ENERGIZED status light (purple light) is on for 252-1201 on P807.  
**Cue: As Indicated**  
Notes: Indication is on P807-2C.
- € \* Close 252-1201 XFMR 11B FDR to bus 12HE  
Standard: Closes circuit breaker 252-1201 by turning its handswitch on P807 clockwise in the CLOSE direction and holding while observing Red light on and green light off.  
**Cue: As Indicated**  
Notes: Circuit Breaker is controlled from P807-2C
- € Observes circuit breaker 252-1208 opens  
Standard: Checks circuit breaker 252-1208 opens on P807 by observing its green light on and its red light off.  
**Cue: As Indicated**  
Notes: Circuit breaker indication is located on P807-2C

---

**BUS 13AD**

€ Ensure XFMR 11A energized up to Bus Feeder Breaker 152-1315 by checking the following:

€ Check closed disconnect J5234 FDR to XFMR ST-11

Standard: Observes disconnect indication on P807 for J5234 red light on green light off.

**Cue: As Indicated**

Notes: Indication is on P807-3B.

€ Check closed circuit breaker 552-1105 XFMR ST-11 FDR to bus 11R

Standard: Observes circuit breaker indication on P807 for 552-1105 red light on green light off.

**Cue: As Indicated**

Notes: Indication is on P807-2C.

€ Check indicator R25-R603 34.5 bus voltage

Standard: Observes indicator R25-R603 on P807 section 1B indicates approximately 34.5KV.

**Cue: As Indicated**

Notes: Indication is on P807-1B.

€ Check closed circuit breaker 552-1101 11R FDR to bus 12R

Standard: Observes circuit breaker indication on P807 for 552-1101 red light on green light off.

**Cue: As Indicated**

Notes: Indication is on P807-1C.

€ Check closed disconnect 589-1101C BOP XFMR 11A disconnect  
Standard: Observes disconnect indication on P807 for 589-1101C red light on green light off.

**Cue: As Indicated**

Notes: Indication is on P807-1C.

€ Check ENERGIZED status light is on  
Standard: Observes ENERGIZED status light (purple light) is on for 152-1315 on P807.

**Cue: As Indicated**

Notes: Indication is on P807-1C.

€ \* Close 152-1315 XFMR 11A FDR to bus 13AD

Standard: Closes circuit breaker 152-1315 by turning its handswitch on P807 clockwise in the CLOSE direction and holding while observing Red light on and green light off.

**Cue: As Indicated**

Notes: Circuit Breaker is controlled from P807-1C

€ Observes circuit breaker 152-1302 opens  
Standard: Checks circuit breaker 152-1302 opens on P807 by observing its green light on and its red light off.

**Cue: As Indicated**

Notes: Circuit breaker indication is located on P807-1C

---

**BUS 15AA**

- € Ensure XFMR ESF 11 energized up to Bus Feeder Breaker 152-1514 by checking the following:
  - € Check closed disconnect J5234 FDR to XFMR ST-11
    - Standard: Observes disconnect indication on P807 for J5234 red light on green light off.
    - Cue: As Indicated**
    - Notes: Indication is on P807-3B.
  
- € Check closed circuit breaker 552-1105 XFMR ST-11 FDR to bus 11R
  - Standard: Observes circuit breaker indication on P807 for 552-1105 red light on green light off.
  - Cue: As Indicated**
  - Notes: Indication is on P807-2C.
  
- € Check indicator R25-R603 34.5 bus voltage
  - Standard: Observes indicator R25-R603 on P807 section 1B indicates approximately 34.5KV.
  - Cue: As Indicated**
  - Notes: Indication is on P807-1B.
  
- € Check closed circuit breaker 552-1104 11R FDR to XFMR ESF11
  - Standard: Observes circuit breaker indication on P807 for 552-1104 red light on green light off.
  - Cue: As Indicated**
  - Notes: Indication is on P807-1C.

€ Check closed circuit breaker 152-1901 FDR FRM XFMR ESF 11  
Standard: Observes circuit breaker indication on P807 for 152-1901 red light on green light off.

**Cue: As Indicated**

Notes: Indication is on P807-1C.

€ Check ENERGIZED status light is on  
Standard: Observes ENERGIZED status light (purple light) is on for 152-1514 on P864.

**Cue: As Indicated**

Notes: Indication is on P864-1C.

€ \* *Turn on the Sync switch for breaker 152-1514 BUS 15AA FDR FRM XFMR ESF 11*  
Standard: Turns on Sync Switch for 152-1514 by turning its handswitch on P864 clockwise in the ON direction.

**Cue: As Indicated**

Notes: Sync Switch is controlled from P864-1C

€ Check sync scope comes to 12 o'clock  $\pm 10^\circ$ .  
Standard: Observes sync scope comes to 12 o'clock  $\pm 10^\circ$  on for 152-1514 on P864.

**Cue: As Indicated**

Notes: Indication is on P864-1B.

€ \* Close 152-1514 BUS 15AA FDR FRM XFMR ESF 11

Standard: Closes circuit breaker 152-1514 by turning its handswitch on P864 clockwise in the CLOSE direction and holding while observing Red light on and green light off.

Cue: **As Indicated**

Notes: Circuit Breaker is controlled from P864-1C

€ Observes circuit breaker 152-1511 opens

Standard: Checks circuit breaker 152-1511 opens on P864 by observing its green light on and its red light off.

Cue: **As Indicated**

Notes: Circuit breaker indication is located on P864-1C

€ Turn off the Sync switch for breaker 152-1514 BUS 15AA FDR FRM XFMR ESF 11

Standard: Turns off Sync Switch for 152-1514 by turning its handswitch on P864 counter-clockwise in the OFF direction.

Cue: **As Indicated**

Notes: Sync Switch is controlled from P864-1C

**ONCE the third bus is transferred (12HE, 13AD and 15AA), INSERT malfunctions on Trigger 1.**

**r21133b – Lockout Service Transformer 21**

**n41140b – Failure of Diesel Generator 12 (Division 2 DG)**

This results in a loss of power to buses 11HD, 14AE, 16AB, and 17AC.

Bus 17AC will automatically re-energize from DG-13.

Per the Loss of AC Power ONEP (05-1-02-I-4) re-energize buses from available offsite feeders and/or DG.

The order of bus re-energization is NOT Critical.

---

**BUS 11HD**

€ Ensure XFMR 11B energized up to Bus Feeder Breaker 252-1101 by checking the following:

€ Check closed disconnect J5234 FDR to XFMR ST-11

Standard: Observes disconnect indication on P807 for J5234 red light on green light off.

**Cue: As Indicated**

Notes: Indication is on P807-3B.

€ Check closed circuit breaker 552-1105 XFMR ST-11 FDR to bus 11R

Standard: Observes circuit breaker indication on P807 for 552-1105 red light on green light off.

**Cue: As Indicated**

Notes: Indication is on P807-2C.

€ Check indicator R25-R603 34.5 bus voltage

Standard: Observes indicator R25-R603 on P807 section 1B indicates approximately 34.5KV.

**Cue: As Indicated**

Notes: Indication is on P807-1B.

€ Check closed circuit breaker 552-1101 11R FDR to bus 12R

Standard: Observes circuit breaker indication on P807 for 552-1101 red light on green light off.

**Cue: As Indicated**

Notes: Indication is on P807-1C.

JOB PERFORMANCE  
MEASURE

€ Check closed disconnect 589-1101D BOP XFMR 11B disconnect  
Standard: Observes disconnect indication on P807 for 589-1101D red light on green light off.

**Cue: As Indicated**

Notes: Indication is on P807-1C.

€ Check ENERGIZED status light is on  
Standard: Observes ENERGIZED status light (purple light) is on for 252-1101 on P807.

**Cue: As Indicated**

Notes: Indication is on P807-1C.

NOTE: Candidate may go directly to breaker 252-1101 handswitch and energize the bus.

€ \* Close 252-1101 XFMR 11B FDR to bus 11HD

Standard: Closes circuit breaker 252-1101 by turning its handswitch on P807 clockwise in the CLOSE direction and holding while observing Red light on and green light off.

**Cue: As Indicated**

Notes: Circuit Breaker is controlled from P807-1C

€ Observes circuit breaker 252-1108 opens  
Standard: Checks circuit breaker 252-1108 opens on P807 by observing its green light on and its red light off.

**Cue: As Indicated**

Notes: Circuit breaker indication is located on P807-1C

---

€ \* Close supply circuit breakers for the following Load Control Centers (LCC):

\_\_\_\_\_ \*LCC 11BD7 breaker 52-11701

\_\_\_\_\_ \*LCC 11BD4 breaker 52-11401

\_\_\_\_\_ \*LCC 11BD3 breaker 52-11301

\_\_\_\_\_ \*LCC 11BD2 breaker 52-11201

\_\_\_\_\_ \*LCC 21BD4 breaker 52-21401

\_\_\_\_\_ \*LCC 21BD3 breaker 52-21301

Standard: Closes the above circuit breakers on H13-P807 by placing the handswitch clockwise in the CLOSE direction and holding while observing red light on and green light off.

Cue: **As Indicated**

Notes: Circuit Breakers are controlled from P807

---

**BUS 14AE**

€ Ensure XFMR 11A energized up to Bus Feeder Breaker 152-1415 by checking the following:

€ Check closed disconnect J5234 FDR to XFMR ST-11

Standard: Observes disconnect indication on P807 for J5234 red light on green light off.

**Cue: As Indicated**

Notes: Indication is on P807-3B.

€ Check closed circuit breaker 552-1105 XFMR ST-11 FDR to bus 11R

Standard: Observes circuit breaker indication on P807 for 552-1105 red light on green light off.

**Cue: As Indicated**

Notes: Indication is on P807-2C.

€ Check indicator R25-R603 34.5 bus voltage

Standard: Observes indicator R25-R603 on P807 section 1B indicates approximately 34.5KV.

**Cue: As Indicated**

Notes: Indication is on P807-1B.

€ Check closed circuit breaker 552-1101 11R FDR to bus 12R

Standard: Observes circuit breaker indication on P807 for 552-1101 red light on green light off.

**Cue: As Indicated**

Notes: Indication is on P807-1C.

JOB PERFORMANCE  
MEASURE

€ Check closed disconnect 589-1101C BOP XFMR 11A disconnect  
Standard: Observes disconnect indication on P807 for 589-1101C red light on green light off.

**Cue: As Indicated**

Notes: Indication is on P807-1C.

€ Check ENERGIZED status light is on  
Standard: Observes ENERGIZED status light (purple light) is on for 152-1415 on P807.

**Cue: As Indicated**

Notes: Indication is on P807-2C.

NOTE: Candidate may go directly to breaker 252-1101 handswitch and energize the bus.

€ \* Close 152-1415 XFMR 11A FDR to bus 14AE

Standard: Closes circuit breaker 152-1415 by turning its handswitch on P807 clockwise in the CLOSE direction and holding while observing Red light on and green light off.

**Cue: As Indicated**

Notes: Circuit Breaker is controlled from P807-2C

€ Observes circuit breaker 152-1402 opens  
Standard: Checks circuit breaker 152-1402 opens on P807 by observing its green light on and its red light off.

**Cue: As Indicated**

Notes: Circuit breaker indication is located on P807-2C

---

**BUS 16AB**

**There are two options for the candidate. Either Option is acceptable.**

**Option 1 ESF Transformer 11**

€ Ensure XFMR ESF 11 energized up to Bus Feeder Breaker 152-1601 by checking the following:

€ Check closed disconnect J5234 FDR to XFMR ST-11

Standard: Observes disconnect indication on P807 for J5234 red light on green light off.

**Cue: As Indicated**

Notes: Indication is on P807-3B.

€ Check closed circuit breaker 552-1105 XFMR ST-11 FDR to bus 11R

Standard: Observes circuit breaker indication on P807 for 552-1105 red light on green light off.

**Cue: As Indicated**

Notes: Indication is on P807-2C.

€ Check indicator R25-R603 34.5 bus voltage

Standard: Observes indicator R25-R603 on P807 section 1B indicates approximately 34.5KV.

**Cue: As Indicated**

Notes: Indication is on P807-1B.

€ Check closed circuit breaker 552-1104 11R FDR to XFMR ESF11

Standard: Observes circuit breaker indication on P807 for 552-1104 red light on green light off.

**Cue: As Indicated**

Notes: Indication is on P807-1C.

€ Check closed circuit breaker 152-1901 FDR FRM XFMR ESF 11  
Standard: Observes circuit breaker indication on P807 for 152-1901 red light on green light off.

**Cue: As Indicated**

Notes: Indication is on P807-1C.

€ Check ENERGIZED status light is on  
Standard: Observes ENERGIZED status light (purple light) is on for 152-1601 on P864.

**Cue: As Indicated**

Notes: Indication is on P864-2C.

€ \* Close 152-1601 BUS 16AB FDR FRM XFMR ESF 11  
Standard: Closes circuit breaker 152-1601 by turning its handswitch on P864 clockwise in the CLOSE direction and holding while observing Red light on and green light off.

**Cue: As Indicated**

Notes: Circuit Breaker is controlled from P864-2C

---

## Option 2 ESF Transformer 12

- € Ensure XFMR ESF 12 energized up to Bus Feeder Breaker 152-1611 by checking the following:
- € Check closed disconnect J3885 FDR to XFMR ESF 12  
Standard: Observes disconnect indication on P807 for J3885 red light on green light off.  
**Cue: As Indicated**  
Notes: Indication is on P807-1C.
  
  - € Check closed circuit breaker 152-1903 FDR FRM XFMR ESF 12  
Standard: Observes circuit breaker indication on P807 for 152-1903 red light on green light off.  
**Cue: As Indicated**  
Notes: Indication is on P807-1C.
  
  - € Check ENERGIZED status light is on  
Standard: Observes ENERGIZED status light (purple light) is on for 152-1611 on P864.  
**Cue: As Indicated**  
Notes: Indication is on P864-2C.
  
  - € \* Close 152-1611 BUS 16AB FDR FRM XFMR ESF 12  
Standard: Closes circuit breaker 152-1611 by turning its handswitch on P864 clockwise in the CLOSE direction and holding while observing Red light on and green light off.  
**Cue: As Indicated**  
Notes: Circuit Breaker is controlled from P864-2C

JOB PERFORMANCE  
MEASURE

€ Orders Turbine Building Operator to reset Bus Undervoltage Lockouts for BOP Buses 11HD and 14AE

Standard: Contacts Turbine Building Operator to reset Bus Undervoltage Lockouts for buses 11HD and 14AE

**Cue: Turbine Building Operator is dispatched.**

Notes: This action may be performed any time after the buses have been re-energized.

Task Standard(s):

BOP Buses 11HD & LCCs, 12HE, 13AD and 14AE are energized from Service Transformer 11

ESF Bus 15AA is energized from ESF Transformer 11.

ESF Bus 16AB is energized from either ESF Transformer 11 or 12.

ESF Bus 17AC is energized from Diesel Generator 13.

## **Generic Instructions**

1. Standard cues for valve operation:
  - a. MOVs:
    - 1) "Full open" = "red light on, green light off"
    - 2) "Full closed" = "red light off, green light on"
  - b. Manual valves
    - 1) "Full open" = "you feel resistance in the counter-clockwise direction"
    - 2) "Full closed" = "you feel resistance in the clockwise direction"
2. The Evaluator should indicate simulated analog gauge readings by pointing a pen or equivalent to the intended place on the gauge.
3. Other methods of simulating control, operation and data collection is at the discretion of the Evaluator.
4. Obtain Shift Management's permission before opening any control panel door or instrument cover.
5. It is expected that the candidate shall locate controlled copies of any required procedures and describe how copies of these procedures would be prepared for use in the field. Only at this time should the evaluator give the candidate previously prepared copies of the procedure(s). This entire procedure need only be performed or simulated once during the entire exam. These activities are not required for JPMs conducted in the Simulator.
6. Consideration of electrical safety must be made during the performance of certain tasks involving electrical circuits and circuit breakers. The performer should be aware that working on or near energized equipment requires, at a minimum, wearing 100% cotton clothing and low voltage (Class 0) gloves while removing or securing shock hazards such as chains, jewelry, watches and metal-framed eyeglasses. Operating or racking circuit breakers may require additional PPE. Details can be found in Att. 2 of the Electrical Safety Rulebook and General Operating procedure 04-S-04-2 (Operation of Electrical Circuit Breakers)

**Under no circumstances is any candidate allowed to operate any equipment outside the simulator without the permission of the Evaluator and Shift Management.**

**ADMIN Task 11:     Determine Shift Staffing to Meet Shift Requirements**

**Initial Condition(s):**

- The Plant is operating at 100% power.
- An operator has called in sick.
- Your shift is below minimum Fire Brigade staffing.

**Initiating Cue(s):**

- You are the Control Room Supervisor.
- Determine whether the following operator to be called in meets the requirements to be your replacement Fire Brigade Member USING ON-TRACK ONLINE.

**Gary W. Carter**

- You already have a Fire Brigade Leader and three other members.

**ADMIN Task 11:** Determine Shift Staffing to Meet Shift Requirements

**Notes**

1. This is an Administrative JPM.

**Task Overview:** This task is to determine the staffing qualifications of an oncoming operator for fire brigade status per Nuclear Management Manual EN-OP-115 Conduct of Operations. It is the responsibility of the Control Room Supervisor to ensure he has sufficient qualified personnel for plant operations.

**Task Justification:** This task is performed at least weekly by Control Room Supervisors. This is an Administrative JPM.

**Tasks:** Critical tasks are underlined, italicized, and denoted by (\*).

For logging into ON-TRACK ONLINE there are two options either is acceptable.

**OPTION 1**

- ☐\* Log into the Entergy network.  
**Standard:** Logs onto the Entergy Network from any network computer.  
**Cue:** None.  
**Notes:**

- ☐\* Select the GGNS Home Page.  
**Standard:** Selects the GGNS Home Page.  
**Cue:** None.

## **Generic Instructions**

1. Standard cues for valve operation:
  - a. MOVs:
    - 1) "Full open" = "red light on, green light off"
    - 2) "Full closed" = "red light off, green light on"
  - b. Manual valves
    - 1) "Full open" = "you feel resistance in the counter-clockwise direction"
    - 2) "Full closed" = "you feel resistance in the clockwise direction"
2. The Evaluator should indicate simulated analog gauge readings by pointing a pen or equivalent to the intended place on the gauge.
3. Other methods of simulating control, operation and data collection is at the discretion of the Evaluator.
4. Obtain Shift Management's permission before opening any control panel door or instrument cover.
5. It is expected that the candidate shall locate controlled copies of any required procedures and describe how copies of these procedures would be prepared for use in the field. Only at this time should the evaluator give the candidate previously prepared copies of the procedure(s). This entire procedure need only be performed or simulated once during the entire exam. These activities are not required for JPMs conducted in the Simulator.
6. Consideration of electrical safety must be made during the performance of certain tasks involving electrical circuits and circuit breakers. The performer should be aware that working on or near energized equipment requires, at a minimum, wearing 100% cotton clothing and low voltage (Class 0) gloves while removing or securing shock hazards such as chains, jewelry, watches and metal-framed eyeglasses. Operating or racking circuit breakers may require additional PPE. Details can be found in Att. 2 of the Electrical Safety Rulebook and General Operating procedure 04-S-04-2 (Operation of Electrical Circuit Breakers)

## Perform Operations Supervisor Review of Tagout

**Give this page to the student**

Initial Condition(s):

- The Plant is 100% power.
- Condensate Transfer Pump A (P11-C001A) motor has burned up.
- Condensate Transfer Pump B is in service.

Initiating Cue(s):

- You are the Shift Supervisor.
- A Work Order has been issued to replace the Pump Motor for P11-C001A.
- There will be NO breach of the fluid system portion of the pump.
- The eSOMS Clearance System computer is out of service and the pump must repaired and returned to service ASAP.
- Review the attached Protective clearance as Operations Supervisor for adequacy to hang.

## **Generic Instructions**

1. Standard cues for valve operation:
  - a. MOVs:
    - 1) "Full open" = "red light on, green light off"
    - 2) "Full closed" = "red light off, green light on"
  - b. Manual valves
    - 1) "Full open" = "you feel resistance in the counter-clockwise direction"
    - 2) "Full closed" = "you feel resistance in the clockwise direction"
2. The Evaluator should indicate simulated analog gauge readings by pointing a pen or equivalent to the intended place on the gauge.
3. Other methods of simulating control, operation and data collection is at the discretion of the Evaluator.
4. Obtain Shift Management's permission before opening any control panel door or instrument cover.
5. It is expected that the candidate shall locate controlled copies of any required procedures and describe how copies of these procedures would be prepared for use in the field. Only at this time should the evaluator give the candidate previously prepared copies of the procedure(s). This entire procedure need only be performed or simulated once during the entire exam. These activities are not required for JPMs conducted in the Simulator.
6. Consideration of electrical safety must be made during the performance of certain tasks involving electrical circuits and circuit breakers. The performer should be aware that working on or near energized equipment requires, at a minimum, wearing 100% cotton clothing and low voltage (Class 0) gloves while removing or securing shock hazards such as chains, jewelry, watches and metal-framed eyeglasses. Operating or racking circuit breakers may require additional PPE. Details can be found in Att. 2 of the Electrical Safety Rulebook and General Operating procedure 04-S-04-2 (Operation of Electrical Circuit Breakers)

**Under no circumstances is any candidate allowed to operate any equipment outside the simulator without the permission of the Evaluator and Shift Management.**

## **ADMIN Task 14:     Review Radioactive Waste Discharge Permit**

### **Notes**

1. This is an Administrative JPM.

**Task Overview:** This task is to review a Radioactive Waster Discharge permit per Administrative Procedure 01-S-08-11. This is the responsibility of the Shift Manager to review and approve all radioactive discharges from GGNS.

**Task Justification:** This task is performed any time Radwaster discharges a tank of liquid to the environment. This is an Administrative JPM.

**Tasks:** Critical tasks are underlined, italicized, and denoted by (\*).

- ☐\*     *Review the Batch Liquid Radwaste Discharge Permit for readiness for use.*

**Standard:** SEE Attached Evaluator Copy of permit for marked critical errors on the permit.

**Errors are circled and marked with \*.**

**The candidate must find 4 or 5 errors for satisfactory completion of JPM.**

**Cue:   None.**

**Notes:**

**Task Standard(s):**

Four of five Errors are noted from Batch Liquid Radwaste Discharge Permit.

## **A&E Task 43      Determine Entry into Site Emergency Plan and Complete Initial Notification Forms as applicable**

### **Initial Condition(s):**

- The Plant is 100% power.

### **Initiating Cue(s):**

- You are the Shift Manager.
- A Dry Fuel Storage Cask is being moved from Unit I to the ISFSI Storage Facility.
- The ISFSI Crawler (Transporter) engine caught on fire at 1010 just as the crawler was going around the Combination Shop on the south side of the building.
- The Site Fire Brigade has responded with the Site Fire Truck and has reported the fire is extinguished at 1035 and a reflash watch has been established.
- There is visible damage to the outside of the Dry Fuel Storage Cask.
- The Radiation Protection Technician monitoring the Fire Brigade and Dry Fuel Storage Cask has stated the Radiation Levels adjacent to the cask are two times pre-fire levels.
- Classify this event and complete any initial notification forms that are required.

## **A&E Task 43 Determine Entry into Site Emergency Plan and Complete Initial Notification Forms as applicable**

### **Notes**

1. This is an Administrative JPM.
2. This is an activity performed by an SRO as Emergency Director per the GGNS Emergency Plan Procedures.

**Task Overview:** This task is to use the Emergency Plan Procedure and Off Normal Event Procedures for classification of plant conditions per the Emergency Action Levels and complete the Initial Notification forms for contact of State and Local Agencies. This is a TIME CRITICAL JPM based on the requirements of 10 CFR50 Appendix E IV.D.3.

**Tasks:** Critical tasks are underlined, italicized, and denoted by (\*).

This is a TIME CRITICAL JPM.

- ☐\* Identify the CONFINEMENT BOUNDARY of a loaded cask has been damaged.  
**Standard:** Candidate uses 10-S-01-1 Section 5.7 to identify the Confinement Boundary has been damaged due to radiation levels being TWO times the pre-event levels in the area of the cask.  
**Cue:** None  
**Notes:** This E-HU1 Unusual Event.
- ☐ Identify the fire location was within the boundaries of the PROTECTED AREA and lasted for greater than 15 minutes (25 minutes), however, the fire was NOT contiguous to any VITAL AREAS as identified in Table H3  
**Standard:** Candidate uses 10-S-01-1 section 5.42 to identify the Protected Area and determine the fire lasted greater than 15 minutes (25 minutes) but was not contiguous to VITAL AREAS as defined in Table H3, also the fire did not affect structures containing functions or systems required for Safe Shutdown.  
**Cue:** None

Appendix D

Scenario Outline

Form ES-D-1

Facility: **GRAND GULF NUCLEAR STATION** Scenario No.: **1** Op-Test No.: **Day 1**

Examiners: \_\_\_\_\_ Operators: \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

**Objectives:** To evaluate the candidates' ability to operate the facility in response to the following evolutions:

1. Insert control rods to lower reactor power per control rod movement plan.
2. Respond to a failure of RPS MG 'B' per Loss of One or Both RPS Busses ONEP.
3. Respond to trip of SBTG 'A'.
4. Downshift Reactor Recirc Pumps to Slow Speed.
5. Take actions to mitigate a large break failure of Feedwater piping in the Drywell per EOPs. (LOCA is NOT severe enough to result in depressurization of RPV.)
6. Respond to multiple control rods stuck withdrawn.
7. Respond to a steam leak on RCIC when initiated.

**Initial Conditions:** Reactor Power is at 53 %. Plant shutdown is in progress in preparation for an outage. Reactor Recirculation pumps in Fast Speed; a single Reactor Feed Pump in Three element Master Level Control; one Heater Drain Pump is pumping forward.

### **INOPERABLE Equipment**

SRM 'F' are INOP and bypassed.  
IRMs 'A' & 'H' are INOP and bypassed.  
APRM 'H' is INOP due to a failed FCTR card.  
HPCS Pump is tagged out of service for failure of the Jockey Pump.  
ESF 12 Transformer is tagged out of service for maintenance.  
RPS 'A' is on Alternate Power due to EPA circuit breaker failure.  
SBGT 'A' is operating for surveillance.

Appropriate clearances and LCOs are written.

**Turnover:** Continue plant shutdown per IOI-2. There are scattered thunder showers reported in the Tensas Parish area.

Scenario 1 Day 1 (Continued)

**Crew Turnover:**

Rx power is at 53% CTP.

The plant is lowering power in preparation for an outage.

Reactor Recirculation Pumps are operating in Fast Speed.

The 'A' Reactor Feed Pump is operating in Three Element Master Level Control.

One Heater Drain Pump is pumping forward.

Circ Water is in Single Pump Dual Train 'A' Pump in service.

SRMs 'F' is INOP and bypassed.

IRMs 'A' & 'H' are INOP and bypassed.

APRM 'H' is failed due to a failed FCTR card and bypassed.

ESF 12 Transformer is tagged out of service for maintenance.

RPS 'A' is on Alternate Power due to an EPA circuit breaker failure.

SBGT 'A' is operating for surveillance 06-OP-1T48-M-0001 holding at step 5.2.11 allowing the System Engineer to obtain data.

Hpcs Pump and Jockey Pump are out of service due to the Jockey Pump motor burned up.

Appropriate clearances and LCOs are written.

Continue plant shutdown to less than 75% Rod Line to Downshift Reactor Recirc Pumps.

At step 8.3/8.4 of IOI-2 Attachment IV.

Bypass Division 2 APRM Bypass Joystick to APRM H position.

IRMs A and H, SRMs F are bypassed in the IC setup for Cycle 15.

Verify or perform the following:

Verify Reactor Power is above the 75% rod line.

Open Circuit Breakers 152-1903, 1904, 1905, 1511, 1611, and 1704

Place HPCS OOSVC handswitch to OOSVC.

Place RPS A on Alternate Power and RESET RPS A logic on P680.

Verify SBTGT A is operating.

Startup all PDS / SPDS screens. Clear any graphs and trends off of SPDS.

Setup the presently used cyclops display and verify it is functional.

Ensure the correct startup sequence is available at the P680 for the present IC.

Install turnover guide, red tag, and LCO paperwork as applicable.

Advance all chart recorders and ensure all pens are inking properly.  
(APRM chart recorders must be turned on and settings for scales on pens 0 – 125 scale)

Place tags on ALL circuit breakers associated with the ESF 12 Transformer outage.

Place tags on APRM H, IRM A & H and SRMS F Joysticks.

**SIMULATOR OPERATION SCENARIO 1**

Once simulator is reinitialized and setup complete take the simulator out of Freeze.

Once the Crew has taken control note the simulator time.

**Lower Reactor Power using Control Rods**

This step will lower Reactor Power to below the 75% Rod Line per IOI-2 Step 8.4.

Set FCBB less than 1.0 using Remote Function cy\_fcbb after crew inserts the first gang of control rods.

Crew will review procedures for lowering power using control rods.

Cues:

**If asked, report as Reactor Engineer – follow the instructions in the front of the Control Rod Movement Sequence.**

**Adjust APRM gains using remote function c51299 as requested.**

**Place FCTR cards in SETUP using remote function c51310 as requested.**

**RPS Motor Generator B trip**

Once power is below the 75% rod line and the Lead Examiner concurs, **activate TRIGGER 2.**

Respond to RPS B Motor Generator trip per ONEP 05-1-02-III-2, Loss of One or Both RPS Buses.

Cue:

**When asked, report as Control Building Operator RPS MG B tripped and is extremely hot to the touch.**

RPS B **CANNOT** be transferred to the Alternate Power Source per the SOI Precautions and Limitations (04-1-01-C71-1 section 3.5) due to FSAR 8.3.1.1.5.4 commitment. The FSAR is an appendix of the GGNS Operating License. Tech spec 3.3.8.2 is not applicable.

---

**SBGT A Fan trip**

Two minutes after the Tech Specs/FSAR briefing have been identified, **activate TRIGGER 3.**

Standby Gas Treatment Exhaust Fan A will trip.

The BOP operator will have to realign Auxiliary Building Ventilation.

Cues:

**If asked, respond as the Auxiliary Building Operator to investigate the SBGT A Exhaust Fan Trip.**

**Report as the Auxiliary Building Operator that the fan motor is hot to the touch and breaker 52-151117 for T48-D001A SBGT A Exhaust Fan is in the Trip Free condition on bus MCC 15B11.**

The SS should direct restoration of Auxiliary Building Ventilation per the SOI 04-1-01-T48-1 section 5.3.

The SS should review Tech Spec 3.6.4.3.

Cues:

**As asked, assist in the restoration of systems.**

**Cue: If contacted, as Assistant Operations Manager –Shift or Duty Manager instruct the shift to continue plant shutdown.**

**Recirc Pump Downshift to Slow Speed**

Once power is below the 75% rod line, the crew is ready per the IOI step 8.4 to downshift Reactor Recirc Pumps to Slow Speed per SOI 04-1-01-B33-1 section 4.3.

---

**Feedwater rupture in the Drywell**

Once the Reactor Recirc Pumps are in slow speed and the Lead Evaluator concurs, **activate TRIGGER 5.**

The reactor will scram on Drywell pressure and will continue to rise from the Feedwater Line Break.

There will be 3 control rods stuck at position 48.

B21-F065A Feedwater Isolation Valve will close when the operator gives it the signal to close.

RCIC can be used to inject to the reactor via Feedwater line B.

Recirc loop leakage simulating check valve leakage will ramp rr063b to 4.6% over 2 minutes.

MSIVs will close due to loss of both RPS buses.

Five minutes after the Feedwater rupture, RCIC will have a steam leak due to packing problems in the RCIC Room. RCIC will fail to automatically isolate on high temperatures, but the operator can manually isolate the system from H13-P601.

Crew will implement actions of EP-2A and EP-3, EP-4 when RCIC Steam Leak occurs.

After the LOCA is detected, perform the following attachments when requested.

Attachment 12 Defeat SDC interlocks	4 minutes to DONE
Attachment 12 for RHR 'B' can be of use.	

EP Attachments which may be requested:

Attachment 19 Defeat RPS	4 minutes to DONE
Attachment 20 Defeat RCIS	5 minutes to DONE
Attachment 8 Defeat MSIV isolations	9 minutes to DONE
If Attachment 8 is requested early by itself - 3 minutes to DONE	
Attachment 18 Defeat ATWS ARI	3 minutes to DONE

QA Record  
Number of pages \_\_\_\_\_  
Date \_\_\_\_\_ Initials \_\_\_\_\_

RCIC will be initially available until the time of the steam leak.

RHR 'A' Shutdown Cooling line are not available due to the 'B' Feedwater Line break.

Once B21-F065A is closed Condensate and Feedwater can be restored through the 'B' Feedwater injection line and level restored. To inject Reactor Pressure will have to be lowered to use Condensate Booster Pumps.

RPS buses will have to be shifted to Alternate and EPA breakers reset to allow insertion of control rods.

Once attachments are installed for control rod insertion **remove stuck control rod malfunction** for control rods as selected to insert the rods with elevated drive pressure.

Inserts Control Rods using elevated drive pressure and RCIS.

Attachments 25 (Condensate Transfer) and 26 (Fire Water) can not be installed by any remote functions just acknowledge the request.

### TERMINATION

Once Reactor level is being restored with Condensate/Feedwater or Low Pressure ECCS and at least the first control rods has been fully inserted and the Lead Evaluator concurs the scenario may be terminated.

#### Critical Tasks

- When allowed by Level/Power Control leg of EP-2A, restores injection from Condensate/Feedwater.
- Insert rods by manual scrams and normal rod insertion using attachments 18, 19, 20.

#### **Emergency Plan Procedure – Emergency Action Level Classification**

Alert based on 10-S-01-1 Attachment I FA1 RCS loss or SA3 more than one control rod past position 02 and power <4% on APRMs.

Scenario Outline

Form ES-D-1

Facility: **GRAND GULF NUCLEAR STATION** Scenario No.: **2** Op-Test No.: **Day 2**

Examiners: \_\_\_\_\_ Operators: \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

**Objectives:** To evaluate the candidates' ability to operate the facility in response to the following evolutions:

1. Startup 2<sup>nd</sup> RFPT and place on Master Controller.
2. Raise Reactor Power by withdrawing control rods. Respond to single control rod stuck per ONEP 05-1-02-IV-1.
3. Respond to APRM D failure upscale.
4. Respond to Pressure Controller fault Reactor Pressure rising.
5. Take actions per the EOPs in response to an ATWS and mitigate the consequences of the ATWS.
6. Respond to failure of Main Steam Bypass Valves to fully function.

**Initial Conditions:** Reactor Power is at 50 %. Plant startup is in progress following an outage. Reactor Recirculation pumps in Fast Speed; a single Reactor Feed Pump in Three element Master Level Control; both Heater Drain Pumps are pumping forward.

## INOPERABLE Equipment

SRM 'F' are INOP and bypassed.

IRMs 'A' & 'H' are INOP and bypassed.

APRM 'H' is INOP due to failed downscale and is bypassed.

HPCS Pump is tagged out of service for failure of the Jockey Pump.

ESF 12 Transformer is tagged out of service for maintenance.

RPS 'A' is on Alternate Power due to EPA circuit breaker failure.

SBGT 'A' is operating for surveillance.

Appropriate clearances and LCOs are written.

**Turnover:** Continue plant startup per IOI-2. Ready for startup of RFPT 'B'. There are scattered thunder showers reported in the Tensas Parish area.

**SIMULATOR OPERATION SCENARIO 2**

Once simulator is reinitialized and setup complete take the simulator out of Freeze.

Once the Crew has taken control note the simulator time.

**Place RFPT B on Master Level controller**

Start RFPT B per SOI 04-1-01-N21-1 section 4.5.5 and 4.6.5.

Cues:

**If asked, as Turbine Building Operator close RFPT Steam line drains on P175.**

**If asked, biasing on the Reactor Feed Pumps should be balanced.**

**Cue: The CRS to raise reactor power to 55% for Reactor Engineering data.**

**Raise Reactor Power using control rods**

The RO will raise reactor power by withdrawing control rod per the Control Rod Movement Sequence.

Cues:

**If asked, as Reactor Engineer withdraw control rods per the movement sequence beginning at step 102b.**

**Immovable Control Rod**

When the RO gets to control rod 36-37 the control rod will NOT move. This will prompt entry into ONEP 05-1-02-IV-1 Control Rod/Drive Malfunctions section 3.5.

Cues:

**If asked, as Reactor Engineering raising CRD Drive Pressure is acceptable.**

**If asked, as Auxiliary Building Operator report CRD Drive Filter DP 17 psid, Suction Filter DP is 2.1 psid, Backwash Filter DP is 2.0 psid and the CRD Flow Control Station is functioning properly.**

**GRAND GULF  
NUCLEAR STATION**

**APRM D failure Upscale**

One minute after Reactor Engineering cue, **activate TRIGGER 4.**

Cues:

**If asked, report as I&C the APRM is hard failed upscale with no apparent cause and it will require further investigation.**

SS should direct un-bypassing APRM H and bypassing APRM D to clear the scram signal and take the Control Rod Withdrawal Block. Then direct resetting RPS B.

SS will consult Tech Specs for 3.3.1.1 Reactor Protection System Instrumentation is NOT met for RPS B and 3.3.2.1 Control Rod Block Instrumentation is met but a Potential LCO is appropriate.

**Reactor Pressure Control System Failure - RPV Pressure Rising**

One minute after the Tech Spec call, **activate TRIGGER 5.**

This will cause a pressure controller failure raising reactor pressure and initiating a Reactor Scram signal (Automatic RPS actuation will fail however the RO can insert a manual reactor scram signal to RPS and subsequent ATWS due to a CRD Scram Discharge Volume Hydraulic Block.

The Main Steam Bypass valves will be available for pressure control for 3 minutes after the Manual Bypass Jack is energized at which time Bypass Valves A and B will fail closed. Bypass Valve C is available.

This is an ATWS with limited Main Steam Bypass Valves available for Reactor Pressure Control.

Operator Actions

Form ES-D-2

Op-Test No.: \_\_\_\_\_ Scenario No.: 2 Event No.: 5 / 6

Event Description: **Pressure Controller Failure – Reactor Pressure Rising**

Time	Position	Applicant's Actions or Behavior
	RO	Responds to Reactor Pressure and Power rising due to failure of Pressure Control System closing Turbine Control Valves. Reactor Pressure will reach RPS Scram setpoint however RPS will fail to actuate.
	RO	Manually initiate or verify actuation of ATWS ARI to insert control rods and inform SS of failure of RPS actuation.
	RO	Observes and reports failure of all control rods to fully insert on ATWS ARI actuation. (CRD Scram Discharge Volume Hydraulic Block)
	RO	Observes and reports Reactor Recirc Pumps Tripped to OFF.
	RO	Provides SS with Scram Report of status of Feedwater, Control Rods, Recirc, and Pressure control.

Operator Actions

Form ES-D-2

Op-Test No.: \_\_\_\_\_ Scenario No.: 2 Event No.: 7

Event Description: **ATWS with Partial Main Steam Bypass Valves**  
**(05-1-01-EP-2; 2A; and 3**

Time	Position	Applicant's Actions or Behavior
	SS	Enters EP-2A.
	BOP	On orders inhibits ADS.
		HPCS Override is not necessary due to Out of service, may elect to close E22-F004 HPCS Injection valve.
	RO	Realigns Condensate and Feedwater on Startup Level Control and maintains reactor level within level band specified by the SS. Initially may operate in a normal lineup then transition to Startup Level Control.
	BOP	Maintains RPV pressure based on SS orders using Turbine Bypass valves or SRVs as appropriate. (optional) Pressure band 800 – 1060 psig. Should attempt to open Main Steam Bypass Valves using the Manual Bypass Jack. This is manually positioning the Bypass valves to maintain pressure. These are acceptable.
	SS	May order opening of long and short string Main Steam Drains to supplement pressure control.
	SS	Order manual initiation and overriding of Low Pressure ECCS.
	BOP	On orders manually initiates and overrides Low Pressure ECCS.

Operator Actions

Form ES-D-2

Op-Test No.: \_\_\_\_\_ Scenario No.: 2 Event No.: 7

Event Description: **ATWS with Main Steam Bypass Valves (Cont.)**

Time	Position	Applicant's Actions or Behavior
	SS **	Orders installation of Attachments 18, 19, and 20 of EP-1. (may not order Attachment 18 since RPS is still energized.)
	SS	Orders installation of Attachments 8 and 12 of EP-1.
	BOP	Notifies SS of MSL RAD HI (If Alarmed)
	SS	Enters EP-4 on MSL RAD HI (If Alarmed)
	SS **	Based on conditions orders Terminate and Prevent step to lower RPV level to reduce reactor power.
	BOP/RO **	Terminates and prevents systems ordered by SS RHR A RHR B RHR C LPCS
	RO **	On orders of SS, initiates flow to the RPV from Condensate / Feedwater.
	BOP/RO **	Insert Control Rods by inserting rods using CRD/RCIS. CRD Drive Pressure, Instrument Air to Containment and Auxiliary Building, and RPS reset. (Scramming rods is not an option) If low pressure ECCS has been initiated, RPS A has no power because the EPA breakers are tripped due powered from alternate.

Scenario Outline

Form ES-D-1

Facility: **GRAND GULF NUCLEAR STATION** Scenario No.: **3** Op-Test No.: **Day 2**

Examiners: \_\_\_\_\_ Operators: \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

**Objectives:** To evaluate the candidates' ability to operate the facility in response to the following evolutions:

1. Start and parallel Division 3 Diesel Generator to Offsite.
2. Respond to a RFPT HPU Leak and subsequent RFPT Trip.
3. Respond to a Recirc FCV Runback and entry into regions of Power to Flow Map.
4. Insert Control Rods to exit undesired regions of Power to Flow Map.
5. Diagnose and respond to a Recirc Pump Seal Failure.
6. Respond to a Feedwater Line break in the Turbine Building and LOCA in the Drywell.
7. Respond to a failure of Division 2 ECCS to initiate.
8. Respond to a failure of 2 ADS SRVs to open.

**Initial Conditions:** Reactor Power is at 100 %.

### **INOPERABLE Equipment**

SRM 'F' are INOP and bypassed.  
IRMs 'A' & 'H' are INOP and bypassed.  
APRM 'H' is INOP due to failed *downscale*.  
HPCS Pump is tagged out of service for failure of the Jockey Pump.  
ESF 12 Transformer is tagged out of service for maintenance.  
RPS 'A' is on Alternate Power due to EPA circuit breaker failure.  
SBGT 'A' is operating for surveillance.

Appropriate clearances and LCOs are written.

**Turnover:** Start and parallel Division 3 Diesel Generator with offsite for engineering testing. There are scattered thunder showers reported in the Tensas Parish area.

Event No.	Malf. No.	Event Type*	Event Description
1		N	Start and parallel Division 3 Diesel Generator. (SOI 04-1-01-P81-1)

Scenario 3 Day 2 (Continued)

**Crew Turnover:**

Rx power is at 100% CTP.

SRMs 'F' is INOP and bypassed.

IRMs 'A' & 'H' are INOP and bypassed.

APRM 'H' is failed downscale and bypassed.

ESF 12 Transformer is tagged out of service for maintenance.

RPS 'A' is on Alternate Power due to an EPA circuit breaker failure.

SBGT 'A' is operating for surveillance 06-OP-1T48-M-0001 holding at step 5.2.11 allowing the System Engineer to obtain data.

HPCS Pump and Jockey Pump are out of service due to the Jockey pump motor burned up.

Appropriate clearances and LCOs are written.

Continue plant operations at rated conditions.

Need to start and parallel Division 3 Diesel Generator with offsite for engineering testing. Load the Diesel to at least 2000 KW.

Plant EOOS is 7.3 YELLOW.

There are scattered thunderstorms reported in the Tensas Parish area.

Bypass Division 2 APRM Bypass Joystick to APRM H position.

IRMs A and H, SRMs F are bypassed in the IC setup for Cycle 15.

Verify or perform the following:

Open Circuit Breakers 152-1903, 1904, 1905, 1511, 1611, and 1704

Place HPCS OOSVC handswitch to OOSVC.

Place RPS A on Alternate Power and RESET RPS A logic on P680.

Verify SGBT A is operating.

Startup all PDS / SPDS screens. Clear any graphs and trends off of SPDS.

Setup the presently used cyclops display and verify it is functional.

Ensure the correct startup sequence is available at the P680 for the present IC.

Install turnover guide, red tag, and LCO paperwork as applicable.

Advance all chart recorders and ensure all pens are inking properly.  
(APRM chart recorders must be turned on and settings for scales on pens 0 – 125 scale)

Place tags on ALL circuit breakers associated with the ESF 12 Transformer outage.

Place tags on APRM H, IRM A & H and SRMS F Joysticks.

**SIMULATOR OPERATION SCENARIO 3**

Once simulator is reinitialized and setup complete take the simulator out of Freeze.

Once the Crew has taken control note the simulator time.

**Start and parallel Division 3 DG to offsite**

The operator will start and parallel Division 3 Diesel Generator to the bus per SOI 04-1-01-P81-1.

Cues:

**If asked, report as Outside Operator actions at the diesel generator as needed.**

**RFPT HPU Leak and RFPT Trip** (GGNS OE from Spring 2006 RFPT A Trip)

Two minutes after the Diesel Generator is loaded to the target loading, **activate TRIGGER 2.**

Cues:

**When asked, report as Turbine Building Operator that hydraulic fluid is spraying from the common discharge piping on the 'A' Hydraulic Power Unit and does not appear to be isolable.**

**After three minutes report that both hydraulic pumps for the HPU have tripped.**

RFPT A will trip resulting in a Recirc Flow Control Valve Runback. (ONEP 05-1-02-V-6)

Reactor Power to Flow should be in the Restricted Region of the Power to Flow Map. (ONEP 05-1-02-III-3)

**Restricted Region of Power to Flow Map**

The crew should take action per the Reduction in Recirc Flow ONEP to exit the Restricted Region of the Power to Flow Map.

**Recirc Pump Shaft Seal Failure**

Once power is reduced to exit the Restricted Region of the Power to Flow Map, one minute after the SS completes any briefing, **activate TRIGGER 4.**

The RO will receive annunciators indicating changes in Recirc Pump B seal status.

The SS should dispatch operators to evaluate Drywell Floor and Equipment Sump indications.

Cue:

**If asked, as Auxiliary Building Operator report Drywell Equipment Drain flow is up to 20 gpm.**

The SS should be determining based on indications the applicability of Tech Spec 3.4.5 RCS Leakage.

SS confers with Duty Manager about requirement to secure Recirc Pump.

Cue:

**As Duty Manager, acknowledge the need to secure Recirc Pump B and order the unit to be shutdown. (OE Clinton Power Station)**

**Feedwater rupture in the Turbine Building**

Once the Reactor Recirc Pumps are in slow speed and the Lead Evaluator concurs, **activate TRIGGER 5.**

The reactor will scram on low reactor water level.

All control rods will fully insert.

Crew will implement actions of EP-2 and EP-3.

High Pressure Core Spray is unavailable.

Scenario Outline

Form ES-D-1

Facility: **GRAND GULF NUCLEAR STATION** Scenario No.: **4** Op-Test No.: **BACK UP**

Examiners: \_\_\_\_\_ Operators: \_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

**Objectives:** To evaluate the candidates' ability to operate the facility in response to the following evolutions:

1. Start 2<sup>nd</sup> Condensate Pump and Condensate Booster Pump.
2. Raise Reactor Power/ Pressure by withdrawing control rods.
3. Respond to a stuck control rod.
4. Respond to a trip of LCC 15BA3.
5. Shift operating CRD pumps.
6. Recognize the failure of MSIVs to completely isolate and take actions to isolate the Main Steam Lines.
7. Recognize and respond to a steam leak in the Auxiliary Building Steam Tunnel. Take actions for mitigation of the leak with a failure of the MSIVs to fully isolate.
8. Take actions per the EOPs in response to three stuck control rods following a Reactor Scram.

**Initial Conditions:** Reactor Power is at 1 % plant heatup and pressurization is in progress. The Reactor is  $\approx$  400 psig with 1 Condensate and Condensate Booster Pump in service on Startup Level Control. Step 50 of the Control Rod Movement Sequence.

## **INOPERABLE Equipment**

SRM 'F' is INOP.

IRMs 'A' & 'H' are INOP.

APRM 'H' is INOP due to failed downscale.

LPCS Pump is tagged out of service for motor oil replacement and will be returned to service in two (2) hours.

ESF-12 Transformer is tagged out of service for Entergy – Mississippi maintenance.

**Scenario 4 BACKUP (Continued)**

Crew Turnover:

Rx is at 1% CTP.

Reactor pressure is approximately 400 psig.

Plant Startup and Heat up is in progress.

One Condensate and Condensate Booster Pump are in service on the Startup Level Control Valve.

Control Rod Movement is on Step 50 of the Control Rod Movement Sequence.

APRM 'H' is failed downscale and bypassed.

LPCS Pump is tagged out of service for motor oil replacement. (Expected return to service is two hours)

ESF-12 Transformer is tagged out of service for Entergy – Mississippi maintenance.

Appropriate clearances and LCOs are written.

Continue to bring the plant to full power per IOI-1 step 6.2.13.

Start both a Condensate and Condensate Booster Pump. Radwaste is ready to put on additional Pre-coat filters and Deep Bed Demineralizers as necessary.

Plant EOOS factor is 9.7 GREEN.

**SIMULATOR OPERATION SCENARIO 3**

Once simulator is reinitialized and setup complete take the simulator out of Freeze.

Once the Crew has taken control note the simulator time.

Condensate Pump and Reactivity change may be reversed at the discretion of the SS.

**Startup of Condensate and Condensate Booster Pump**

The Crew will start second Condensate and Condensate Booster Pump per SOI 04-1-01-N19-1.  
(Condensate Pre-coat Differential Pressure Control Valve N22-F502 is full open)

Simulator Operator will coordinate with the RO for Condensate Pre-coat and Deep Bed Demineralizers as necessary.

**Raise Power with control rods**

The Crew will raise reactor power and pressure (opening the Main Steam Bypass Valves to >10% open) by withdrawing control rods. Starting at step 80 of the Control Rod Movement Sequence.

**Control Rod 16-29 Stuck**

When control rod 16-29 is selected to be moved, it is stuck. The Crew will implement actions of the Control Rod/Drive Malfunctions ONEP 05-1-02-IV-1 section 3.5. The Crew will attempt to raise Drive pressure to move the control rod but the control rod will NOT move inward or outward.

Cue:

**If asked, respond as Auxiliary Building Operator, the following indications:**

**CRD Drive Filter DP                      15 psid**

**CRD Suction Filter DP                  2.2 psid**

**CRD Backwash Filter DP               2.2 psid**

**CRD Flow Control Valve Station valve lineup and operation is normal.**

**Loss of LCC 15BA3**

Two (2) minutes after the CRD Pump Transfer, **activate TRIGGER 4.**

Load Control Center 15BA3 will trip. This will result in a closure of Primary Containment and Secondary Containment air operated valves associated with Instrument Air, Plant Service Water, Fire Protection; Standby Gas Treatment Enclosure Building Fan 'A' and RHR 'A' motor operated valves and Jockey Pump.

Cue:

**If asked, report as Auxiliary Building Operator, circuit breaker 52-15301 is tripped and cannot be reset.**

**If asked, report as Electrical Maintenance, the tripper mechanism in the circuit breaker is damaged and there is no apparent damage to the bus or its associated components. A spare breaker can be moved to the LCC and installed to restore the bus.**

The Tech Spec Identification for inoperable equipment will a post scenario evolution since the loss of the bus and not regaining the bus until after the main event will preclude adequate time to check inoperable equipment.

04-1-01-R21-15 Attachment I has the load list of affected equipment.

Tech Specs

- 3.5.1 ECCS – Operating
- 3.6.1.3 Primary Containment Isolation Valves
- 3.6.1.7 RHR Containment Spray System
- 3.6.1.8 Feedwater Leakage Control System
- 3.6.2.3 RHR Suppression Pool Cooling
- 3.6.3.2 Primary Containment and Drywell Hydrogen Igniters
- 3.6.4.2 Secondary Containment Isolation Valves
- 3.6.4.3 Standby Gas Treatment System
- 3.8.7 Distribution Systems – Operating

SS Tech Spec reviews will occur post scenario.

Based on the loss of Instrument Air the SS will identify a point at which insertion of a manual scram will be ordered.

**ATWS**

When the RO inserts a manual scram using RPS either the Reactor Mode Switch to SHUTDOWN or depressing of the Manual Scram Pushbuttons, RPS will activate. All control rods will insert with the exception of three (32-13; 16-37; 16-29 are at position 24). This will put operations in EP-2A.

**Steam Line Break in the Auxiliary Building Steam Tunnel with a failure of MSIVs to isolate fully**

Two minutes after control rods are inserted, **activate TRIGGER 1 (Auxiliary Building Steam Tunnel Steam leak with failure of Group 1 isolation).**

**Three (3) Minutes after Reactor Scram, report as Security white smoke or steam is coming out of the top of the Auxiliary Building.**

**If contacted, report as Radiation Protection, there are NO abnormal radiation surveys of the Auxiliary Building.**

**If contacted, report as Chemistry, there is NO leaking fuel bundles in the reactor.**

SS will take actions per EP-4 for an uncontrolled, unfiltered, and unmonitored release from Secondary Containment.

Six (6) minutes after Trigger 3, **delete malfunction r21142t.**

Cue:

**Report as Auxiliary Building Operator or Electrical Supervisor, circuit breaker 52-15301 was inadvertently tripped via the manual trip pushbutton and the closing springs were found to be discharged. The closing springs have been recharged and the circuit breaker is ready for closure.**

**EOP Attachments:**

Attachment 18 Defeat ATWS ARI 4 minutes to DONE

Attachment 19 Defeat RPS 5 minutes to DONE

If Attachment 20 is the only attachment requested change the time to 3 minutes.

Attachment 20 Defeat RCIS 6 minutes to DONE

Attachment 2 Defeat RCIC Trips 8 minutes to DONE

Attachment 1 Defeat RCIC Suction Xfer 8 minutes to DONE

Attachment 12 Defeat RHR SDC Interlocks 6 minutes to DONE

**Call up the full core display to identify which control rod malfunctions to delete.  
Once Attachments are installed and Control Rods 32-13 and 16-37 are selected for insertion  
delete malfunctions to allow insertion using RCIS. Maintain control rod 16-29 stuck at its  
position.**

This will allow the SS to make a decision to traverse to EP-2 from EP-2A.

**TERMINATION**

**ONCE:**

Systems are aligned for RPV level control and pressure control.

And Control Rods 32-13 and 16-37 have been inserted.

And the Lead Evaluator concurs the scenario may be terminated.

- 
- When multiple control rod drifts occur, manually scrams the reactor.
  - Restore LCC 15BA3 to allow inserting all insertable control rods.

**Emergency Plan Procedure – Emergency Action Level Classification**

Site Area Emergency based on 10-S-01-1 Attachment I EAL SA3.

Op-Test No.: \_\_\_\_\_ Scenario No.:   4   Event No.:   1  

Event Description: **Start second Condensate and Condensate Booster Pump**

**(SOI 04-1-01-N19-1 section 4.3)**

Time	Position	Applicant's Actions or Behavior
	RO	Starts second Condensate Pump. (04-1-01-N19-1 Section 4.3.2a)
	RO	Starts second Condensate Booster Pump. (04-1-01-N19-1 Section 4.3.2b)

Events may be reversed by the crew.

Op-Test No.: \_\_\_\_\_ Scenario No.:   4   Event No.:   2  

Event Description: **Withdraw control rods to raise power.**

**(Control Rod Movement Sequence & 03-1-01-1)**

Time	Position	Applicant's Actions or Behavior
	SS	Provides Reactivity brief to crew.
	RO	Verifies control rods and positions per Control Rod Movement Sequence and selects control rods per next gang of control rods. (May select Individual or Gang movement and may select any Control Rod in the Gang.)
	BOP	Act as Verifier for Control Rod movements.

	RO	Moves Control Rods per Control Rod Movement Sequence. (04-1-01-C11-2 Sections 4.3 and 4.5)
	RO	Withdraws control rods to achieve 10% Main Steam Bypass Valve Opening per 03-1-01-1 Section 6.2.13a.

Op-Test No.: \_\_\_\_\_ Scenario No.:   4   Event No.:   3  Event Description: **Control Rod 16-29 stuck  
(ONEP 05-1-02-IV-1 and Technical Specifications 3.1.3 & 3.1.4)**

Time	Position	Applicant's Actions or Behavior
	RO	Identifies control rod 16-29 will not move with normal drive pressure from CRD.
	SS	Directs actions per ONEP 05-1-02-IV-1 section 3.5. May skip section 3.5.1. This section is not required based on plant conditions.
	SS/BOP	Dispatches local operators to check CRD operating parameters.
	SS	Orders raising CRD Drive Pressure in 25 psid increments.
	BOP	Adjusts C11-F003 CRD Pressure Control Valve to raise CRD Drive Pressure 25 psid.
	RO	Attempts to move control rod 16-29 and determines the control rod will not move.
The steps of raising CRD Drive Pressure and attempting to withdraw the control rod will be repeated up to 475 psid. Once indication on H13-P601 is off scale high indication will either be local or using PDS Computer Point. C11N008.		
	SS	Once CRD Drive Water Pressure is at 475 psid, CRD Drive Water Pressure will be reduced to normal and an alternate control rod will be moved to verify this is not a generic problem. (ONEP 05-1-02-IV-1 Section 3.5.5)
	RO	Moves alternate Control Rod.

	SS	Consults Technical Specifications 3.1.3 condition A and 3.1.4 and contacts System and Reactor Engineering for consideration of scrambling control rod 16-29.
--	----	--

Op-Test No.: \_\_\_\_\_ Scenario No.:   4   Event No.:   4  

Event Description: **Shift operating CRD Pumps.**

**(SOI 04-1-01-C11-1)**

Time	Position	Applicant's Actions or Behavior
	BOP	Directs local operator to close CRD Pump B discharge valve C11-F217B.
	BOP	Directs local operator to vent CRD Pump B.
	BOP	Starts CRD Pump B.
	BOP	Directs local operator to open CRD Pump B discharge valve C11-F217B.
	BOP	Directs local operator to close CRD Pump A discharge valve C11-F217A.
	BOP	Stops CRD Pump A.
	BOP	Directs local operator to open CRD Pump A discharge valve C11-F217A.

Op-Test No.: \_\_\_\_\_ Scenario No.:   4   Event No.:   5  

Event Description: **Loss of Load Control Center (LCC) 15BA3**  
**(ONEP 05-1-02-I-4, 05-1-02-V-6, SOI 04-1-01-R21-15 and Technical Specification 3.8.7)**

Time	Position	Applicant's Actions or Behavior
	BOP	Identifies the loss of power to LCC 15BA3 and that circuit breaker 52-15301 on H13-P864 is open. (ARI 04-1-02-1H13-P864 1A-C3 & E3)
	SS	Directs BOP operator to attempt to close circuit breaker 52-15301. (ONEP 05-1-02-I-4 Section 2.2)
	BOP	Attempts to close circuit breaker 52-15301 and determines breaker did not close and reports to SS.
	SS	Dispatches an operator and electricians to circuit breaker 52-15301 to investigate failure.
	SS	Takes actions per ONEP 05-1-02-I-4, Loss of AC Power and Alarm Response Instructions.
	SS	Orders control room operators to determine equipment and systems affected by the loss.
Systems of primary concern: Instrument Air to Scram Air Header and Main Steam Isolation Valves. Plant Service Water to the plant. Plant Chillers will trip on loss of Plant Service Water Plant Chilled Water isolation valves will eventually close due to loss of Instrument Air		
	SS	Establishes conditions that will warrant inserting a manual reactor scram.
	RO/BOP	Assess equipment affected by the power loss. (04-1-01-R21-15 Attachment I)

	SS	<b><u>POST SCENARIO</u></b> – Consults Technical Specifications to determine LCO status. (T/S 3.8.7; 02-S-01-17 Attachment II)
--	----	---

Op-Test No.: \_\_\_\_\_ Scenario No.: 4 Event No.: 5 (Cont.)

Event Description: **Loss of Load Control Center (LCC) 15BA3  
(ONEP 05-1-02-I-4, 05-1-02-V-6, SOI 04-1-01-R21-15 and Technical Specification 3.8.7)**

Time	Position	Applicant's Actions or Behavior
	RO**	When multiple control rods begin to drift, places the Reactor Mode Switch to Shutdown or arms and depresses at least one Manual Scram Pushbutton per RPS Division (A & B).
	RO	Reports all control rods have fully inserted except for three (16-29; 32-13; 16-37)
	SS	Enters EP-2A.
	RO	Reports downshift of Recirc Pumps to Slow Speed.
	Depending upon the pace of actions from EP-2A, control rods may begin to drift inward. This is acceptable.	
	RO	On orders initiates ATWS ARI/RPT.
	BOP	On orders inhibits ADS.
	BOP	On orders initiates and overrides HPCS.
	SS	Specifies RPV level band and method of pressure control.
	RO	Verifies alignment of Condensate and Feedwater systems on Startup Level Control and maintains reactor level within level band specified by the SS.

	BOP	Controls reactor pressure based on orders of SS with Main Steam Bypass valves.
--	-----	--

\*\* Critical Task

Op-Test No.: \_\_\_\_\_ Scenario No.:   4   Event No.:   6  

Event Description: **Respond to a steam leak in Auxiliary Building Steam Tunnel with a failure to isolate. (EP-4) w/ Automatic Scram failure**

Scenario is geared toward EP-4 actions, stuck control rods are a component malfunction to implement actions for control rod insertion.

Time	Position	Applicant's Actions or Behavior
	BOP	Announces Steam Tunnel temperature alarms and EP-4 entry and failure of Group 1 to isolate.
	BOP**	Manually isolates MSIVs and reports failure of 'B' Main Steam Line to isolate and closes B21-F098B Main Steam Shutoff Valve. (Operator may close all 4 B21-F098's.)
	SS	Enters EP-4 for Steam leak in Auxiliary Building. (SS should recognize no conditions exist warranting lowering of reactor level for ATWS.)
	SS	Directs Reactor water level control band using Condensate and Feedwater on Startup Level Control.
	RO	Maintains Reactor water level using Condensate and Feedwater on Startup Level Control.
	SS	Directs Reactor pressure control using SRVs. (Optional)
	BOP	Maintains Reactor pressure using SRVs. (Optional)
	SS	Directs use of RHR 'B' for Suppression Pool Cooling. (Optional)

	BOP	Starts RHR 'B' in Suppression Pool Cooling. (Optional)
--	-----	--

\*\* Critical Task

Op-Test No.: \_\_\_\_\_ Scenario No.: 4 Event No.: 6 (Cont.)

Event Description: **Respond to a steam leak in Auxiliary Building Steam Tunnel with a failure to isolate. (EP-4) w/ Automatic Scram failure**

Time	Position	Applicant's Actions or Behavior
	SS	Directs installation of EOP Attachment 20. (May order Attachments 18 and 19 but should not be required if RPV Level and pressure are being maintained in the normal operating band. ATWS ARI may be reset to normal and RPS failed to actuate. May order Attachment 21 and if so must clear this attachment to facilitate insertion of stuck control rods.)
	RO	Resets ATWS ARI/RPT to allow use of RCIS to insert control rods.
	SS	Upon report that LCC 15BA3 is ready to be restored, orders restoration of LCC 15BA3.
	BOP	Restores LCC 15BA3 by closing 52-15301. (SOI 04-1-01-R21-1 section 4.1)
	BOP	Restores Auxiliary Building isolation valves. (ONEP 05-1-02-III-5)(Auxiliary Building Bypass switches are not required to complete this.)
	SS	On orders insertion of control rods that are not fully inserted. (EOP EP-2A and ONEP 05-1-02-I-1 section 3.5.5)
	RO/BOP	Sets up CRD for driving control rods. (SOI 04-1-01-C11-1 Attachment VIII)
	RO	Inserts control rods 32-13 and 16-37 (order not specified).
	RO	Attempts to insert control rod 16-29 and determines control rod is immovable.

	SS	Determines Reactor will remain sub-critical under all conditions without boron and the single control rod stuck out and exits EP-2A

Pj S 1 U This JPM does not appear to have discriminatory value.

Pk S 3 U This JPM is evaluated as unsatisfactory due to being a repeat safety function.

**Instructions for Completing Matrix**

This form is not contained in or required by NUREG-1021. Utilities are not required or encouraged to use it. The purpose of this form is to enhance regional consistency in reviewing operating tests. Additional information on these areas may be found in Examination Good Practices Appendix D. Check or mark any item(s) requiring comment and explain the issue in the space provided.

1. Determine whether the task is dynamic (D) or static (S). A dynamic task is one that involves continuous monitoring and response to varying parameters. A static task is basically a system reconfiguration or realignment.

2. Determine level of difficulty (LOD) using established 1-5 rating scale. Levels 1 and 5 represent inappropriate (low or high) discriminatory level for the license being tested.
3. Check the appropriate box when an attribute weakness is identified:
  - The initiating cue is not sufficiently clear to ensure the operator understands the task and how to begin.
  - The JPM does not contain sufficient cues that are objective (not leading).
  - All critical steps (elements) have not been properly identified.
  - Scope of the task is either too narrow (N) or too broad (B).
  - Excessive overlap with other part of operating test or written examination.
4. Check the appropriate box when a job content error is identified:
  - Topics not linked to job content (e.g., disguised task, not required in real job).
  - Task is trivial and without safety significance.
5. Based on the reviewer's judgment, is the JPM as written (U)nacceptable (requiring repair or replacement), in need of (E)ditorial enhancement, or (S)atisfactory?
6. Provide a brief description of problem in the explanation column. Provide conclusion on whether JPM SET criteria satisfied (i.e., number/distribution of safety functions, A.3 and A.4 integrated with parts B/C, Admin topics per section meet ES).
