

Public Outreach Meeting  
Duke Energy  
William States Lee III Nuclear  
Station Units 1 And 2  
Combined License Application

Stephanie Coffin  
Division of New Reactor Licensing

# Purposes of this meeting

- Talk with you about combined license that may eventually authorize construction and operation of a new nuclear power plant
- Explain what the NRC does during the review of a combined license application
- Describe how you can participate in the regulatory process

# Nuclear Regulatory Commission

- Mission: to protect the public health and safety, promote the common defense and security, and protect the environment
- Independent Agency
  - Five Commissioners
  - Staff of technical and regulatory experts
- Over 30 years of experience regulating operating reactors and other civilian use of nuclear materials
  - Regulates 104 operating reactors in the U.S.
  - Administers Agreement State Program under which South Carolina entered into Agreement to regulate control and use of certain nuclear materials at hospitals and industrial facilities
  - Regulates commercial nuclear fuel production facilities and waste storage facilities in the U.S.

# Participants in NRC Licensing Process

## NRC

- Commissioners
- Staff members
- Hearing Boards
- Advisory Committee on Reactor Safeguards

(ACRS)

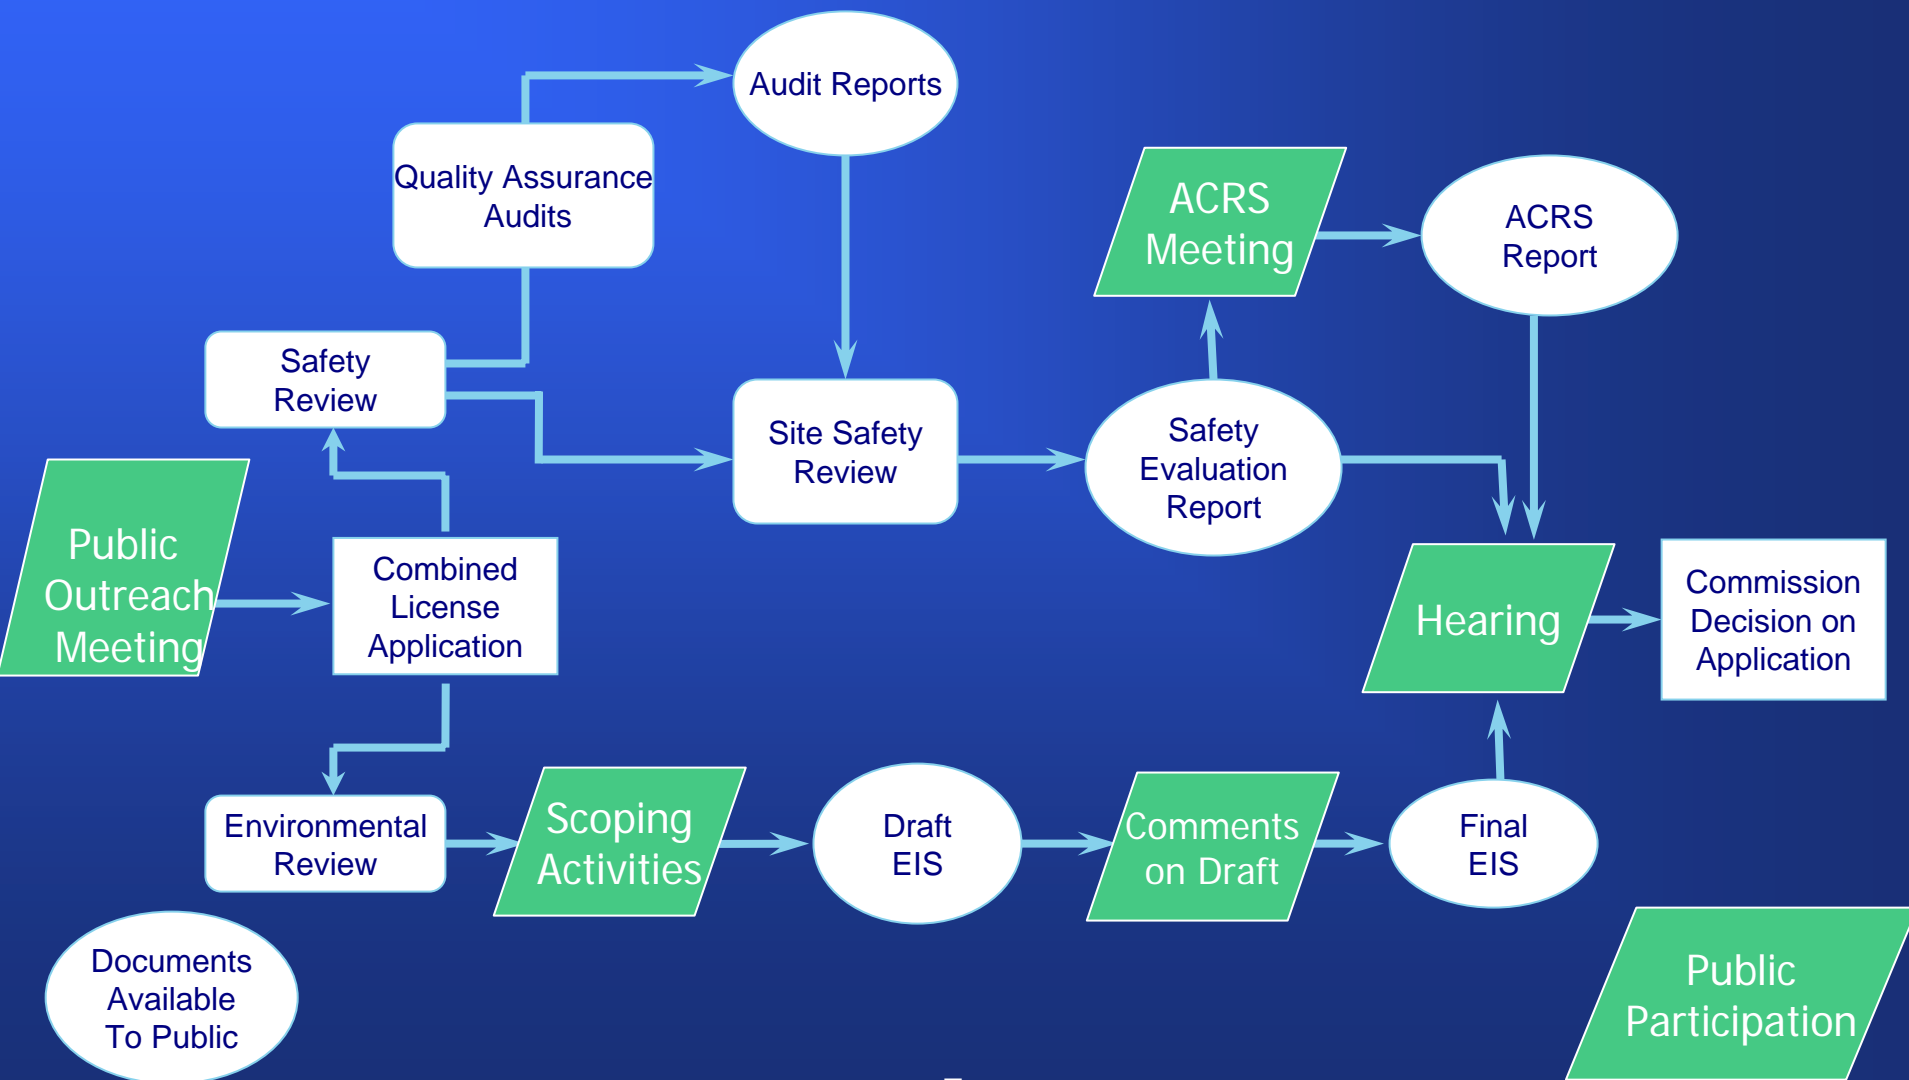

## Stakeholders

- Residents of the community
- Public interest groups
- Other Federal Agencies
- State entities
- Local officials
- Tribal officials, and others

## License Applicant

Duke Energy

# Combined License Application Review Process

# Combined License Application Review and Construction Inspection

- Jeff Ciocco, Senior Project Manager
  - Overall Combined License Application Review
- Paul Kallan, Project Manager
  - Environmental Review
- Omid Tabatabai, Senior Reactor Operations Engineer
  - Construction Inspection

# Combined License

- **What:** Authorization from the NRC to construct and, with conditions, operate a nuclear power plant at a specific site and in accordance with laws and regulations
- **Who:** Duke Energy
- **When:** Duke Energy plans to submit the application in October 2007.

# Combined License Regulatory Process (10 CFR Part 52)

- Has been in place since 1989
  - Reflects lessons learned from licensing and construction of plants in the US in the 60's and 70's
  - Intended, in part, to avoid inefficient use of NRC resources to review design as construction is proceeding
- Safety-focused and efficient process
  - Provides for NRC review of all site, design, and operational issues before granting license
  - Allows the public access to information about the reactor design and site-specific issues early in the licensing process
  - Maintains a predictable and stable regulatory process for all stakeholders
  - Safety benefits should be realized once plants are operating due to more efficient use of resources resulting from increased standardization of reactor designs

# What the NRC will review

- Compliance with regulations to ensure adequate protection of public health and safety and common defense and security
  - Design of facility
  - Quality assurance
  - Security plan
  - Emergency preparedness (with the Federal Emergency Management Agency )
  - Operator Training
  - Applicant's process to verify that the nuclear plant will be built as designed and operated in accordance with NRC regulations
- Disclosure of environmental impacts and evaluate alternatives

# NRC Staff Review

- Determine whether application satisfies NRC safety and environmental regulations and requirements
- Perform environmental review in accordance with National Environmental Policy Act and other statutes
- Make informed decisions based on the facts and compliance with U.S. laws and NRC regulations
- Clearly document our safety and environmental findings
- Follow established procedures that allow public participation
- Maintain an open and transparent process

# Opportunities for Public Participation

- Obtain information at [www.nrc.gov](http://www.nrc.gov)
  - NRC processes and how to participate
  - Publicly available information about the license application
- Meetings between the NRC and the applicant
- Comment on environmental review
- Participate in Advisory Committee on Reactor Safeguards meetings
- Participate in the hearing process

# Combined License Application Review Process

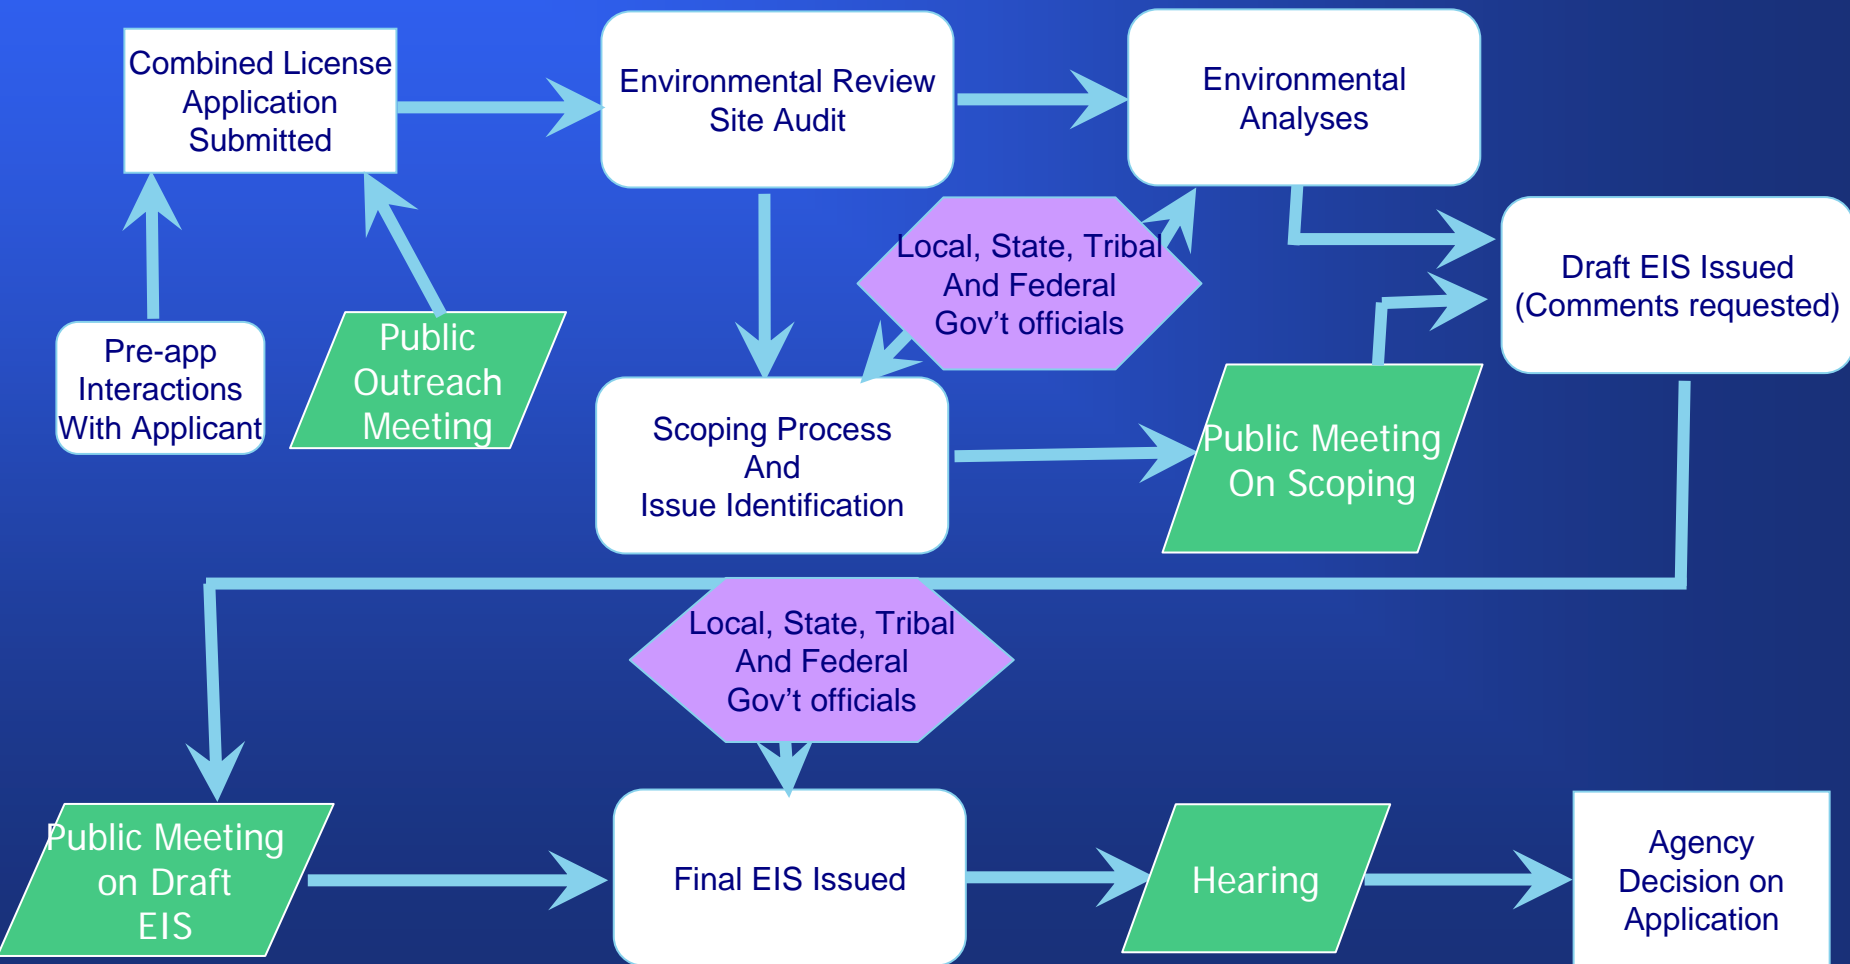

# The Hearing Process

- NRC issues a Notice of Hearing in the *Federal Register*, which offers an opportunity for the public to participate in the hearing as a party (called “intervention”)
- A request (petition) to intervene must be filed within 60 days of the date of the Notice
- The requestor must state his or her interest that may be affected by granting the license, and at least one dispute with the application
- Three judges (an Atomic Safety and Licensing Board (ASLB)) will decide whether to grant intervention and conduct the hearing
- A person who did not seek to intervene or was not granted intervention may make a statement to the Board, although this statement is not evidence in the hearing
- Regulations governing intervention are in 10 C.F.R. § 2.309

# National Environmental Policy Act (NEPA)

- NEPA requires Federal agencies to use a systematic approach to consider environmental impacts
- An Environmental Impact Statement (EIS) is required for major Federal actions that may significantly affect the quality of the human environment
- Granting a combined license is considered a major Federal action

# Environmental Review Process

# Information Gathering

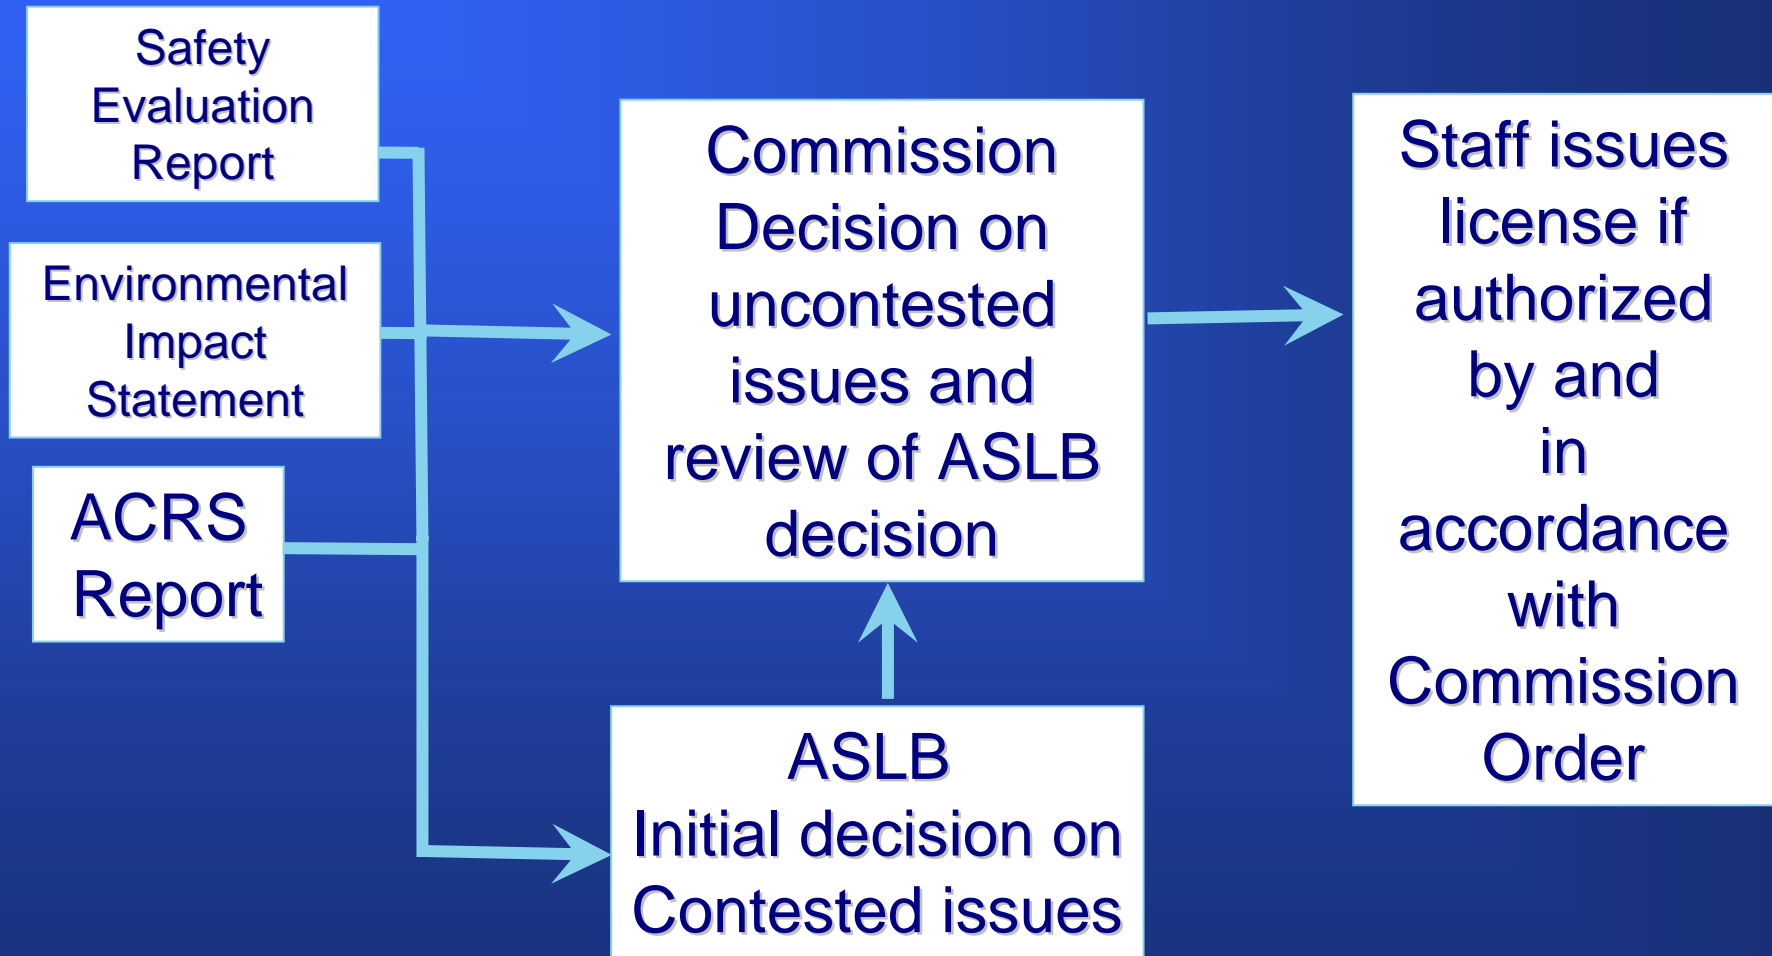

# Environmental Review Team Expertise

# Combined License Decision Process

# If the License is issued....

- The NRC would authorize the licensee to start construction of a nuclear power plant and to operate, if specified conditions are met
  - Preparatory site work that is not related to the nuclear safety-portion of the facility, such as clearing land and building access roads and other support facilities, may be permitted by other authorities such as the state and/or local municipality
- NRC staff would inspect nuclear safety–related construction activities
- NRC would verify that the plant is built as designed prior to operation (required by regulation)

# NRC Construction Inspection Program

Vendor  
Inspections

Quality  
Assurance Engineering  
Program

Operational  
Program  
Inspections

Inspection,  
Tests, Analyses, and  
Acceptance Criteria

# ITAAC

- Inspections, Tests, Analyses, and Acceptance Criteria to confirm that the facility has been constructed and will be operated in conformity with the license
- Required to be submitted as part of the design certification and combined license applications
- Reviewed and approved by NRC staff in conjunction with the application

# ITAAC Implementation

- Licensees perform 100% of ITAAC verification during construction
- NRC reviews all completed ITAAC and directly inspects a sample of ITAAC-related activities.
- Both the Licensee and NRC document ITAAC closure activities
- The regulations provide an opportunity to request a hearing based on whether acceptance criteria are met
- Prior to plant operation all acceptance criteria must be met

# NRC CONTACTS

- Jeff Ciocco, Combined License Project Manager
  - [JAC3@NRC.GOV](mailto:JAC3@NRC.GOV), 301-415-6391
- Stephanie Coffin, Chief, AP1000 Projects Branch
  - [SMC1@NRC.GOV](mailto:SMC1@NRC.GOV), 301-415-2757
- Paul Kallan, Environmental Project Manager
  - [PBK1@NRC.GOV](mailto:PBK1@NRC.GOV), 301-415-2809
- William Burton, Chief, Environmental Projects Branch
