NMED Item Number: 020692

Narrative: Last Updated: 05/24/2006

The licensee reported that an annual audit revealed the loss of 348 MBq (9.4 mCi) of C-14. The material consisted of 167 mg of a research compound in dry powder form contained in a small vial (less than 20 ml in volume). The material was used for basic metabolic research purposes. The last accounting of the material was in December 1999. Despite a detailed search, the material could not be located. The licensee believes that the material was incinerated along with other radioactive waste, which would result in a maximum off-site dose of 0.27 uSv (0.027 mrem). To prevent recurrence, the licensee retrained department personnel, will perform more frequent inventories, and developed a standardized radioactive material tracking procedure.
