re: MOX facility at SRS

My feelings are:

No nuclear facilities should be licensed.

There is no safe level of radiation exposure.

Radiation exposure = dna damage= birth defects and cancers which are both increasing as I write this.

Government credibility on nuclear issues is nil. Mostly disinformation. Failed to adhere to any commitments and timelines.

There is no remedy for present nuclear contamination and nuclear byproducts.

There is no safe storage.

Rubber mats, vitrification, stainless steel, concrete for conainment will all be gone long before the half life of the radioactive elements are expended.

Radioactive elements are moving into the groundwater of SC and GA as this is being written.

The potential is present to permanently contaminate the aquifers of GA, SC, and FL.

Nuclear is inordinately expensive if all the associated processes are cost included. If decommissioning is included, it is priceless.

DOCKETED
USNRC

Docket No. 70-3098-MLA

Template=SECY-038

SECY-02

No further licensing should be granted until the deactivation of radioactive materials is accomplished.

Radioactive facilities and storage areas should not be left to future generations to deal with. There is more than ample precedent that future generations may not have the technology or the resources to even identify contaminated areas.

When the USSR faced dissolution due in part due to the financial collapse of the currency, nuclear facility workers walked off the job and went home.

There are unsettling economic forecasts in the news for our own country. Should there be an unforeseen economic downturn in our economy will the financial resources be there for our own nuclear facilities or will workers also leave in droves if the money spigot is turned off. The Savannah River Ecology Lab had its funds curtailed and the leaders left before the doors were closed.

No licensing of MOX should be permitted.

Lastly, and most ominously, years earlier in Aiken it was discussed "the ease of double tracking a MOX facility to produce nuclear warhead material." The pressure to build a new generation of battlefield tactical nuclear weapons is no secret.

Let us not even think of cracking the lid on this MOX box and letting the genie out.

Respectfully,

William J Mareska DDS
