TENNESSEE VALLEY AUTHORITY (TVA) - FITNESS FOR DUTY (FFD) PROGRAM PERFORMANCE DATA: JANUARY - JUNE 2007

In accordance with 10 CFR 26.71(d), enclosed is TVA's FFD Program Performance Data for the six-month period of January 1 - June 30, 2007. Enclosure 1 summarizes the testing results under TVA's FFD Program that occurred during this reporting period. Enclosures 2 - 4 contain the performance data and summary of TVA management actions for TVA's nuclear plant sites (Browns Ferry, Sequoyah, and Watts Bar, respectively). Enclosure 5 consolidates the data for TVA's nuclear corporate organization (primarily Chattanooga and Knoxville Corporate offices). One FFD event reported to the NRC pursuant to 10 CFR 26.73 during the six-month period is described in Enclosure 6.

The random testing rate of drug and alcohol use is in accordance with the requirements prescribed in 10 CFR 26.24(a)(2).

TENNESSEE VALLEY AUTHORITY (TVA) FITNESS FOR DUTY (FFD) PERFORMANCE DATA JANUARY 1 – JUNE 30, 2007

The following summarizes testing results under TVA's FFD Program that occurred during this reporting period:

I. TVA's "Re-screening of Specimens"

Reference: TVA's policy for re-screening was addressed in the February 28, 1997, FFD Performance Report.

Summary

During this reporting period, TVA Nuclear Power Group (NPG) screened 143 specimens at the lower cutoff for marijuana. There were three positive tests identified from this group.

II. TRENDS

The confirmed positive test rate for all categories (pre-employment, pre-access, for-cause, post-accident, random, follow-up, and other) for this reporting period was 0.44 percent (19 positive tests) which is 0.17 percent lower than the last reporting period. The rate of random confirmed positives was 0.21 percent (4 positive tests) which is 0.07 percent lower than the last reporting period.

SUMMARY OF MANAGEMENT ACTIONS FOR BROWNS FERRY NUCLEAR PLANT

In the **pre-access** test category, one licensee employee (LE) and eight contract employees (CEs) tested positive. The LE was denied access, removed from site, and restricted from TVA NPG work for three years. Five of the eight CEs were denied access, removed from site, returned to the contract company, and restricted from TVA NPG work for three years. Three of the eight CEs were also detected attempting to subvert the Fitness for Duty testing process by substitution. These CEs presented out-of-temperature specimens that tested negative and subsequent observed specimens that tested positive. These three CEs were denied access, removed from site, returned to the contract company, and permanently restricted from TVA NPG work. The LE requested that split specimen testing be performed. The split specimen test reconfirmed the LE's positive test results. Six CEs requested that split-specimen testing be performed. The split specimen tests reconfirmed the CE's positive test results. One of the CEs requested an appeal. The appeal upheld the positive test results.

Also in the **pre-access** category, one CE's initial positive test results failed to reconfirm upon the CE's requested split specimen testing. The TVA Medical Review Officer investigated all associated test results, verified the split specimen test as "Failure to Reconfirm," and reported the original urine drug test as "Test Cancelled." The CE did not return to work during this reporting period, but is eligible for consideration upon applying for unescorted access.

In the **for-cause (observed behavior)** test category, one CE tested positive. The CE's unescorted access was revoked. The CE was removed from site, returned to the contract company, and restricted from TVA NPG work for three years. A review of the CE's work did not identify any deficiencies.

In the **random** test category, three CEs tested positive. The CEs' unescorted access was revoked. The CEs were removed from site, returned to the contract company, and restricted from TVA NPG work for three years. Two of the CEs requested that split specimen testing be performed. The split-specimen test reconfirmed the positive test results. Reviews of the CEs' work did not identify any deficiencies.

SUMMARY OF MANAGEMENT ACTIONS FOR SEQUOYAH NUCLEAR PLANT

In the **pre-access** test category, five CEs tested positive. The CEs were denied access, removed from site, returned to the contract company, and restricted from TVA NPG work for three years. One CE requested that a confirmatory blood alcohol test be performed. The blood alcohol test reconfirmed the positive test results. Two CEs requested that split specimen testing be performed. The split specimen tests reconfirmed the positive test results.

In the **random** test category, one LE tested positive. The LE's unescorted access was revoked. The LE was removed from site, suspended for a minimum of 14 days, referred to the Employee Assistance Program, returned to work during this reporting period, and was placed in the follow-up alcohol and drug testing program. The LE requested that a confirmatory blood alcohol test be performed. The blood alcohol test reconfirmed the positive test results. A review of the LE's work did not identify any deficiencies.
