Gentlemen:

In the Matter of the Application of) Docket Nos. 50-390
Tennessee Valley Authority) 50-391

**WATTS BAR NUCLEAR PLANT (WBN) - NRC INSPECTION REPORT NO. 390, 391/86-21 -
SUPPLEMENTAL RESPONSE TO NOTICE OF VIOLATION**

This letter supplements TVA's March 16, 1987 response to Violation 50-390/86-21-01 concerning failure to meet post modification testing requirements. In that response, TVA committed to perform a 100 percent review of workplans written before 1985 to determine whether additional functional testing was required to verify the integrity of the modification described by the workplan. Any additional testing was to be completed for the identified workplans prior to WBN Unit 1 fuel load.

However, as reported in TVA's letter of February 13, 1992, TVA has since elected to reperform a Regulatory Guide 1.68 test program in support of licensing WBN Unit 1. Because this new program provides a comprehensive approach to demonstrating the capability of plant equipment to perform its design function, including component testing, the commitment to perform a 100 percent review of work plans written before 1985 is no longer considered necessary.

If you have any questions, please telephone P. L. Pace at (615) 365-1824.

Very truly yours,

William J. Museler
