Subject: Re: Flowmeter Allegations

Unfortunately I can't make Iqbal available for further review of this issue at this time, because of other pressing assignments and any other reviewer would not be sufficiently informed to be of value. As indicated to you, previously, we have no need for further clarification from Caldon for determining acceptability of the Cross Correlation Technology applied by Westinghouse. I believe, however, at this point, your reviewers should have the same knowledge as we have on this issue, from review of the documents we have formally reviewed, to ascertain relevance of Caldon's claims from responses to your reviewers' questions during their visit at Caldon. We'll be happy to review your conclusions at the end of your review.

>>> Dale Thatcher 07/01/03 11:20AM >>>

Steve Alexander has received a new engineering report from Caldon [ER-365] which is based on the visit a number of weeks ago. We understand that the report may contained information that would substantiate the portion of the allegations related to "evidence that questions the accuracy claims of W" 7C

Would you have Iqbal/ or someone else review this report to verify this in the next few days and then all of us need to meet. Steve will be giving you a copy today.

Let me know as soon as you can, we are trying to meet our 180 day metric Thanks.
