Subject: Transmittal of Preliminary Audit Report for Proprietary Review

Jim,

On July 30 through August 3, 2007, the NRC staff performed an audit to resolve open items related to the ESBWR fuel assembly and control rod design, audit the supporting finite element analyses, and discuss draft RAI responses related to the ongoing Marathon-5S control rod design. I have attached a draft version of the audit report and requesting that GEH confirm that the report does not contain proprietary information.

I would appreciate it if you could complete your review within a week. If you do identify information GEH considers proprietary the NRC will either have to excise it or prepare proprietary and non-proprietary versions before making it publically available.

Thank you,
Michelle
