Subject: FYI - IP Activities

Hello All,

Since the next 2-3 weeks of Indian Point related work are going to be busier than usual due to fish sampling efforts, follow-ups on H-3 in IP on-site sewer, and renewed well sampling I wanted to share anticipated activities with the involved parties.

This weeks activities include the following:

Monday 6/4

1. Received notification of 6/27 NRC public mtg on process of review of application for license extension. At this time DEC and DOH rad programs don't anticipate a need to participate.
2. DEC fisheries biologist Larry Skinner to pick up dermestid (Sp?) cleaned fish bone samples from NYS Museum and transport to Wadsworth (Ed Horn) for validation of fish bone preparation and analysis procedure. Wadsworth to coordinate with ORISE lab to provide them with sample aliquot for the same purpose.
3. DEC fisheries biologist Larry Wilson to contact Normandeau to coordinate State personnel accompaniment on fish sampling trips. (Reminder that commitment is to participate in as many of the sampling trips as we can reasonably find staff for, but we did not commit to accompany all of them. Larry has several days over this week and next that he is available. Once he has his conversation with Normandeau on coordinating field work I will share with involved State and NRC personnel. We may look for additional people to participate in observing the fish collection. Would prefer staff with experience with fish sample collection if possible, but if such are not available people with experience documenting sample collection in other types of field sampling would be welcome.)

Tuesday 6/5

1. 11:30 Entergy/NRC/DEC update call. (T. Rice)
2. NRC resident inspector Greg Bowman to observe collection of split samples from MW-40 and the upper lift station for the on-site sanitary sewer (split to confirm absence of H-3 in sewer).
3. Normandeau begins preparation of boat and gear for fish sampling.

Thursday 6/7

1. DOH radiation program staffer Nick Webster to observe collection of split samples from LaFarge monitoring wells. Also to pick up splits from sampling done on 6/5 for MW-40 and upper lift station. Will bring all splits back for Wadsworth.
2. Larry Wilson will observe collection of fish from the Hudson River on day 1 of sampling for the enhanced REMP fish sampling effort (if Normandeau starts as scheduled.)
3. 11:30 Entergy/NRC/DEC update call (T. Rice)
4. 3:30 stakeholder conf call (Cast of thousands! Okay, only dozens, but it seems like thousands some times.)

Friday 6/8

Anticipated day 2 of fish sampling.

(Please note I'll be out of the office for West Valley meetings Wed afternoon through Friday evening. I will leave a cell # with our secretaries @2-8579. I anticipate calling in via cell on the Thursday conf calls.)

I'll try to keep everyone posted.

B-48

Thanks,
Tim
