John,

Thanks John. Yes we are aware of the upcoming June 27th NRC public meeting to discuss the NRC license renewal review process.

DEC, along with several other State agencies will send staff to observe the proceedings.

I discussed the possibility of State participation in the poster/availability session for this meeting both internally here at DEC and with our counterparts in the DOH and it was decided that we will not send staff to participate for this meeting. It's focus is primarily the NRC review process and not site performance or environmental issues. As such our involvement would be outside of the meeting focus and would not contribute substantially to the issue at hand.

However, the DEC and DOH would be willing to consider an invitation to participate in the poster session for the anticipated Environmental Scoping public meeting. It is hoped that by that time we will have at least a draft report from Entergy on the groundwater investigation, and may also have more information to share with the public on the fish sampling effort.

Please keep us informed about the status and scheduling of that meeting.
Thank you for the offer,
Tim

I know that the State has been informed, but I wanted you to know also.
I will be manning the standard groundwater information booth. Do you plan to attend?
