Subject: Fish Samples

Hello Jay and Don,

It looks like Normandeau is close to being done with fish sampling for the enhanced REMP effort. Since I have no direct line to their management, is it possible for you to find out when they anticipate starting sample preparation in their lab?

(I will contact their field supervisor re: this, but for expediencies sake would appreciate your help.)

As discussed previously we intend to have a State observer at their lab during sample preparation and splitting.

This is a tough time of year to make last minute scheduling plans so I would greatly appreciate it if one of you could provide us with this info as soon as possible to help facilitate our scheduling an observer.

Please cc Barbara Youngberg on any replies as I am out of the office Thurs and Fri for family reasons.

Thanks,
Tim
