1. No significant impact on my workload. I already have other EH&S responsibilities for the Bay City plant, and visit the site periodically. Most of my time is spent in Ludington, with only occasional visits to Bay City. Oversight of the Bay City plant is a small time commitment, as the site only uses a small number of sealed sources on vessels that are not entered. There is very little turnover in site inventory (last change was in 1999), so no ordering or disposal responsibilities. Only real effort is the periodic wipe tests, shutter checks, surveys, and physical inventories of the sources.
 2. On-site response to an emergency would take several hours. However, the Midland Dow site (NRC license #21-00265-06) is located approximately 20-30 minutes from the Bay City site and have personnel and equipment available and on-call to respond quickly to an emergency involving radioactive material.
 3. You have no additional responsibilities at any other NRC-licensed facility.
- 8.A. Possession limits: Of 1.5 Ci at the site.

Thank you

Abe Williams
