Indian Point Energy Center Status Report

May 29, 2007

Operational Status –IP2 Shutdown to Repair Valve

Control room operators manually shut down Indian Point Unit 2 at 3:47 p.m. on Monday to repair a valve in the feedwater system. Earlier in the day, operators reduced power to approximately 15 percent power after noting a decrease in steam generator level. Operators opened a parallel, low-flow by-pass valve but were unable to maintain adequate level in the steam generator for full power operations.

The Engineering department working with operations and maintenance developed a trouble shooting plan which included a stroke test on the valve.

The Feed Regulator Valve is located in the auxiliary feedwater building on the non-nuclear side of the plant. Each steam generator has a feed regulator valve in the feed water line that supplies water to the steam generators

The unit is currently in MODE 2 at 2 percent reactor power where it will remain while the feedwater valve is repaired. The unit should be reconnected to the grid by midweek.

Indian Point Unit 2 was on-line for 90 days before the shutdown.

Unit 3 is operating at 100 percent reactor power and has been on line for 27 days.

Educational Outreach

Entergy Nuclear Northeast provides customized outreach education programs for schools, youth groups, and civic organizations. The topics we cover include Emergency Planning, Understanding Radiation, Nuclear Fuel and a general overview of the operations of Indian Point Energy Center. If you would like a brochure or are interested in scheduling a program, contact IPEC Communications at 914-271-7441.

If you have any questions or need clarification of the information provided, please contact Kathy McMullin, manager of communications, Indian Point Energy Center, at 914-271-7132.
