Subject: IPEC USGS fracture flow telecon

Gentlemen, From: James Noggle
Greetings,

As you know, Mr. John Williams has completed an evaluation of the well log and pump draw-down data which includes fracture flow calculations and comparison with GZA's packer testing flow calculations. I understand you have already received this information. We would like an opportunity to discuss this with you by telephone on July 11, 2007 from 9:00 - 11:00 am. To join us on the telephone conference, please call 800-638-8081 and enter the pass code (b)(2)High. Tom Nicholson will introduce the meeting with John Williams presenting his work and assessment of GZA's flow calculations. We invite GZA and Entergy to ask any questions and provide any remarks after John's presentation. If you have not yet received the WELL CAD files, please let me know and we will send them to you. Talk to you soon.

Regards,

Jim
