

MISSILE AND 5389

RE-ENTRY SYSTEMS  
DEPARTMENT

Mr. W. E. Haddican  
Isotopes Branch  
Division of Materials Licensing  
United States Atomic Energy Commission  
Washington, D. C. 20545

Dear Mr. Haddican:

This additional information is contingent upon whether or not it is administratively practical and economically feasible for two operating departments (each managed as entities in themselves) to be represented in the same broad license.

Should our study show that this bi-representation would be advantageous, then a new application will be submitted to you. However, should our findings prove otherwise, then the additional information you requested for our existing broad license application will be submitted.

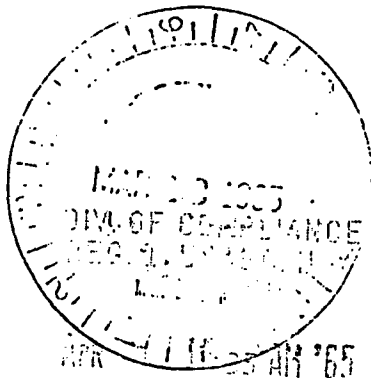

**Thank you for your kind considerations.**

Sincerely yours,

M. A. Trepak.
