Office of New Reactors (NRO)
Items of Interest
Week Ending October 12, 2007

Public Meeting with South Carolina Electric & Gas (SCE&G) to Discuss Details of Seismology at the V.C. Summer Nuclear Station Site

On October 3, 2007, NRO staff met with SCE&G to discuss seismic justifications and the associated bases for those justifications. An overview of Section 2.5 of the Final Safety Analysis Report was presented, and a summary of the geology, seismology and geo-technical investigations were provided. Further, seismic issues (bedrock shear fractures and reservoir induced seismicity) were addressed. SCE&G took a proactive approach in providing the staff with sufficient detail to address their seismic justifications and bases.

Intergovernmental Outreach Meeting

On October 4, 2007, NRO and Office of the Federal and State Materials and Environmental Management Programs staff met with staff from the Environmental Protection Agency's radiation protection division and their regional counterparts. The NRC representatives discussed the new reactor environmental review process and schedule.

Public Meeting with Westinghouse Regarding the AP1000 Design Certification (DC) Amendment

On October 11, 2007, NRO met with Westinghouse, NuStart, and TVA representatives to discuss the review approach for the Westinghouse AP1000 DC Amendment. Several areas of concern were discussed regarding the amendment application, and specific examples were provided in support of those areas of concern. Westinghouse then presented its understanding of the identified issues. Westinghouse agreed to review the staff's issues, and revise its application if necessary to address our concerns.

Public Meeting with Westinghouse on the AP1000 Piping Design Acceptance Criteria (DAC) as Part of the Design Certification Amendment

On October 11, 2007, NRO met with Westinghouse representatives to discuss staff issues with the piping DAC resolution. The staff discussed example options concerning Westinghouse's initiative to address the Piping DAC in the AP1000 design. Westinghouse agreed to consider the matter further and indicated that it would propose an approach in completing the piping design that would be consistent with the regulations and would support a path forward to resolution of the Piping DAC.

Proposed Rule Signed by Acting EDO

On October 10, 2007, the Acting Executive Director for Operations approved a proposed rule which revises 10 CFR Part 72.214, "List of Approved Spent Fuel Storage Casks," by revising the Holtec International HI-STORM 100 listing within the "List of Approved Spent Fuel Storage Casks" to include Amendment No. 4. This amendment will modify the Certificate of Compliance (CoC) by including changes to add site-specific options to the CoC to permit use of a modified HI-STORM 100 cask system at the Indian Point Unit 1 (IP1) Independent Spent Fuel Storage Installation.

10th Meeting of the International Cooperative Program for the Inspection of Nickel Alloy Components (PINC)

From October 3-5, 2007, RES staff attended the subject meeting which focused on the reliability of non-destructive examinations (NDE) for primary water stress corrosion cracking (PWSCC). Participants reviewed the progress of the Atlas Database of PWSCC Morphology and NDE Responses and assessed the performance of various NDE techniques to detect and size PWSCC cracks in piping and dissimilar metal welds. Staff visited the Finnish nuclear regulator (STUK) to discuss this program and the codes and standards governing NDE in plant construction and in-service inspection.

Meeting on Halden Reactor Project (HRP) Proposed Research

On October 11, 2007, the staff participated in briefings by HRP representatives on HRP's proposal for the next three-year agreement period (2009-2011). The HRP program covers two main areas – Fuels and Materials and Man-Technology-Organization (MTO). The proposal for the Fuels and Materials program addresses fuel high burn-up capabilities in normal operating conditions, fuel response to transients, cladding corrosion and water chemistry Issues, plant lifetime assessments, and instrumentation for use in materials studies. The proposal for the MTO program addresses human performance; design, evaluation and review of human-system interfaces and control centers; mixed-reality technologies; computerized operations and maintenance support; and software systems dependability. The intent is to have all 17 HRP member countries review and prioritize the proposed research projects and have international agreements put in place by mid-2008.

Limited Work Authorizations for Nuclear Power Plants (AI05- Parts 2, 50, 51, & 52)

On October 9, 2007, the NRC published a final rule in the *Federal Register* (72 FR 57419) that amended its regulations applicable to limited work authorizations that allow certain construction activities on nuclear power plants to begin before a construction permit or combined license is issued. The final rule modifies the scope of activities that are considered construction for which a construction permit, combined license, or limited work authorization is necessary. The final rule becomes effective November 8, 2007.

OPA Received Significant Media Inquiries on the Following:

Fermi 2 nuclear plant steam lines puncture.

Inattentive guards at Peach Bottom nuclear plant in Pennsylvania.

Mixed Oxide plant construction issues, NRC's environmental impact statement, new contention filings and the Atomic Safety and Licensing Board hearing process.

Tritium leaks at Catawba and Beaver Valley nuclear plants.

Recent uranium recovery application NRC received for a new in-situ recovery facility in Wyoming.

Leakage at the Pennsylvania State University's research reactor.

Other Public Affairs Items:

OPA conducted a taped interview with AT&T Tech Channel, an online news service, regarding new reactor application activity.
